Start Here: How IPRPMS Works

Your responsibilities, complete workflow, exact clicks and return paths.

Read first: the Start Here guide explains how the whole system works. Then use this manual to do your part, check the outcome and hand work to the right person.

START HERE

The whole system in everyday language

IPRPMS turns an agreed plan into reported results, reviewed decisions and useful feedback. Follow one piece of work from its planned target to its approved result.

1. Decide the planned work

Plan and Report prepares the main and sub objectives: what will be done, who is responsible, how it is measured and when it will be reported.

2. Approve and distribute it

The Plan and Report Directorate reviews the plan and the Chief approves it. Department Chiefs assign the published activities to Directorates, who release them to Experts.

3. Do the work and report the truth

Department Experts enter measured results and evidence. The coordinator or backup submits the completed sections. Target means planned; actual means delivered.

4. Review, approve and learn

Directorates and Chiefs check the results, Plan and Report completes organization review, and approved results feed reports, comparisons and feedback.

START HERE

Two approval journeys - do not mix them up

Planning approval answers: Is this the right work and target? Performance approval answers: Is this reported result correct and supported?

Planning journey

Plan and Report Expert -> Plan and Report Directorate -> Plan and Report Chief -> Department Chief assignment -> Department Directorate acceptance -> Department Experts can report.

Performance journey

Experts prepare -> coordinator/backup submits -> Department Directorate sections -> Department Chief -> Plan and Report Expert -> Plan and Report Directorate -> Plan and Report Chief.

Written-document journeys

Reports, feedback, period weights and plan narration each have their own record and review status. Saving or downloading a document does not approve numeric performance.

If something is wrong

The responsible reviewer returns the existing record or section with a comment. The preparer corrects it, saves it and resubmits. Do not create another report to avoid the return.

START HERE

Know the people before you click

A department is the office responsible for work. A role is what a person may do. A reporting-team assignment decides which Expert coordinates submission.

Within a department

Experts enter results. The coordinator or backup submits them. Directorates review their assigned sections. The Department Chief owns the consolidated department decision.

Within Plan and Report

The Expert prepares and checks. The Directorate reviews and forwards. The Plan and Report Chief gives the final organization decision for the relevant workflow.

Supporting roles

Administrator handles accounts and settings; HR handles personnel; Department Head and Supervisor handle permitted plans and employee tasks; Employee performs work; Auditor inspects; general Head Office reads final records.

Names that sound alike

Department Directorate is not Plan and Report Directorate. Department Chief is not Plan and Report Chief. Department Head is not automatically Department Chief. General Head Office viewing is not final approval.

A simple example from beginning to end

Illustrative training story only: suppose an activity plans 12 equipment inspections for a period and the team completes 10.

Before work begins

The plan records inspections as the unit, 12 as the target, a responsible department, the period and the reporting frequency. The plan and assignment approvals happen first.

When the period ends

The Expert enters 10 as the actual and attaches the inspection register. The Expert does not change the target from 12 to 10. The coordinator saves and submits the ready section.

When a reviewer finds an issue

If the evidence supports only 9, the reviewer identifies the activity and missing inspection in the return comment. The responsible team corrects or supplies evidence on the same record.

After final approval

For a simple higher-is-better actual/target ratio, 10/12 is about 83.3%. The application applies the KPI's configured scoring method; lower-is-better indicators need their own direction. Reports explain the shortfall and next action.

Words you will see on the screen

Read the label before entering a value. A target, actual, weight and achievement percentage describe different things.

Main objective / sub objective / KPI

A main objective is the larger goal. A sub objective is a measurable activity below it. A permanent KPI code such as K1 identifies the same defined indicator across relevant plans; it is not a new result.

Target / actual / unit / baseline

Target is the planned amount. Actual is the measured delivery. Unit says what is counted, such as tons, number or days. Baseline is the starting or reference value. Leave an unknown result missing rather than inventing zero.

Frequency / reporting period

Frequency is daily, weekly or monthly. Period is the particular day range, week or month. An activity can be monthly even if its department normally reports weekly.

Annual weight / period weight / achievement

Weight controls contribution to a score; it is not the actual result. Period redistribution is separate from annual weights. Achievement uses the approved measurement direction and configured calculation.

What each status means for you

The badge tells you whether work is still being prepared, waiting for someone else, returned for correction or protected after approval.

Draft / Saved

The record is stored but may still be incomplete. Save keeps your work; Submit or Send moves it to the next reviewer. Saving alone usually does not notify the next decision maker.

Submitted / named review stage

Someone else must act. Read the reviewer named by the stage. Editing is limited by that stage. Use an available recall request when you need a submitted objective reopened.

Returned / correction requested

Read the comment and identify the affected record or section. Correct the same record, save it and use its available resubmission action. Unaffected approved sections can remain approved.

Approved / final approved / locked

Department approval is an intermediate step; final organization approval is a later decision. A certified month or locked distribution needs an authorized reopening with a reason before relevant changes.

Get ready before the first report

Most missing-button problems come from role, ownership, assignment or stage. Check these before entering figures.

Your account

Ask the administrator to confirm your department, role badges and active login. Never share a password. An employee profile alone does not guarantee the correct account permissions.

The approved activities

Confirm the correct plan year, target, unit and frequency. Department Chief and Directorate assignment approvals must be complete before Experts can report an activity.

The reporting team

The Department Chief assigns an active Expert as coordinator and a different Expert as backup. Other Experts can prepare work, but they cannot submit the shared report just because their email contains expert.

The evidence and time window

Gather the source registers and relevant attachments for the selected period. Check submission deadlines and any locked month. Ask for authorized help rather than changing the period to bypass a control.

START HERE

Handle returns without getting lost

A good return comment tells the next person exactly what to do. A good correction makes that change traceable.

For the reviewer

Name the department, period, activity and problem. Say what value, evidence or explanation is required. Example: For activity X this week, attach the register supporting the actual of 10.

For the preparer

Open the notification or the existing record, read the latest comment and correct the affected section. Save before resubmitting. Do not erase evidence just to make the warning disappear.

For partial section returns

A Directorate can return its section to Experts; a Department Chief can return selected sections to Directorates. Keep clean approved sections intact instead of rebuilding the whole report.

For Plan and Report correction requests

Weekly/monthly Expert correction requests go through the Plan and Report Directorate and Chief before a return to the Department Chief. Follow the actual action offered for daily reports and the current stage.

What happens after the figures are approved?

Approved information becomes useful when readers can understand its scope, completeness and meaning.

Period scoring and closure

The Plan and Report Expert prepares eligible period-weight redistribution, the Directorate reviews it and the Chief approves and locks it. Authorized month certification follows coverage and result checks.

Reports and narration

A performance report explains the selected results and next actions. Plan narration explains the whole selected-year plan and can be downloaded as Word or PDF. Each follows its own review path.

Feedback to departments

Plan and Report prepares, reviews and finally releases official feedback. The Department Chief reads the released feedback and agrees improvements with the team.

Performance comparison

Compare the same indicator, definition, unit and time span. Historical 2018 annual data supports annual comparison, not invented monthly history. Missing, new or unmatched KPIs must remain visible as gaps.

START HERE

Use your role manual as a daily job aid

Start with this overview, then open only the manual for your assigned role. The pages show actual application screens with safe demonstration records.

Before the screenshots

Read Your job, What you receive, Who receives your work and the six-step roadmap. They explain your responsibility before you follow individual clicks.

On a screenshot page

The large screen is the main reference. Red numbers match the numbered actions underneath. After this step explains the outcome, next person or condition to check.

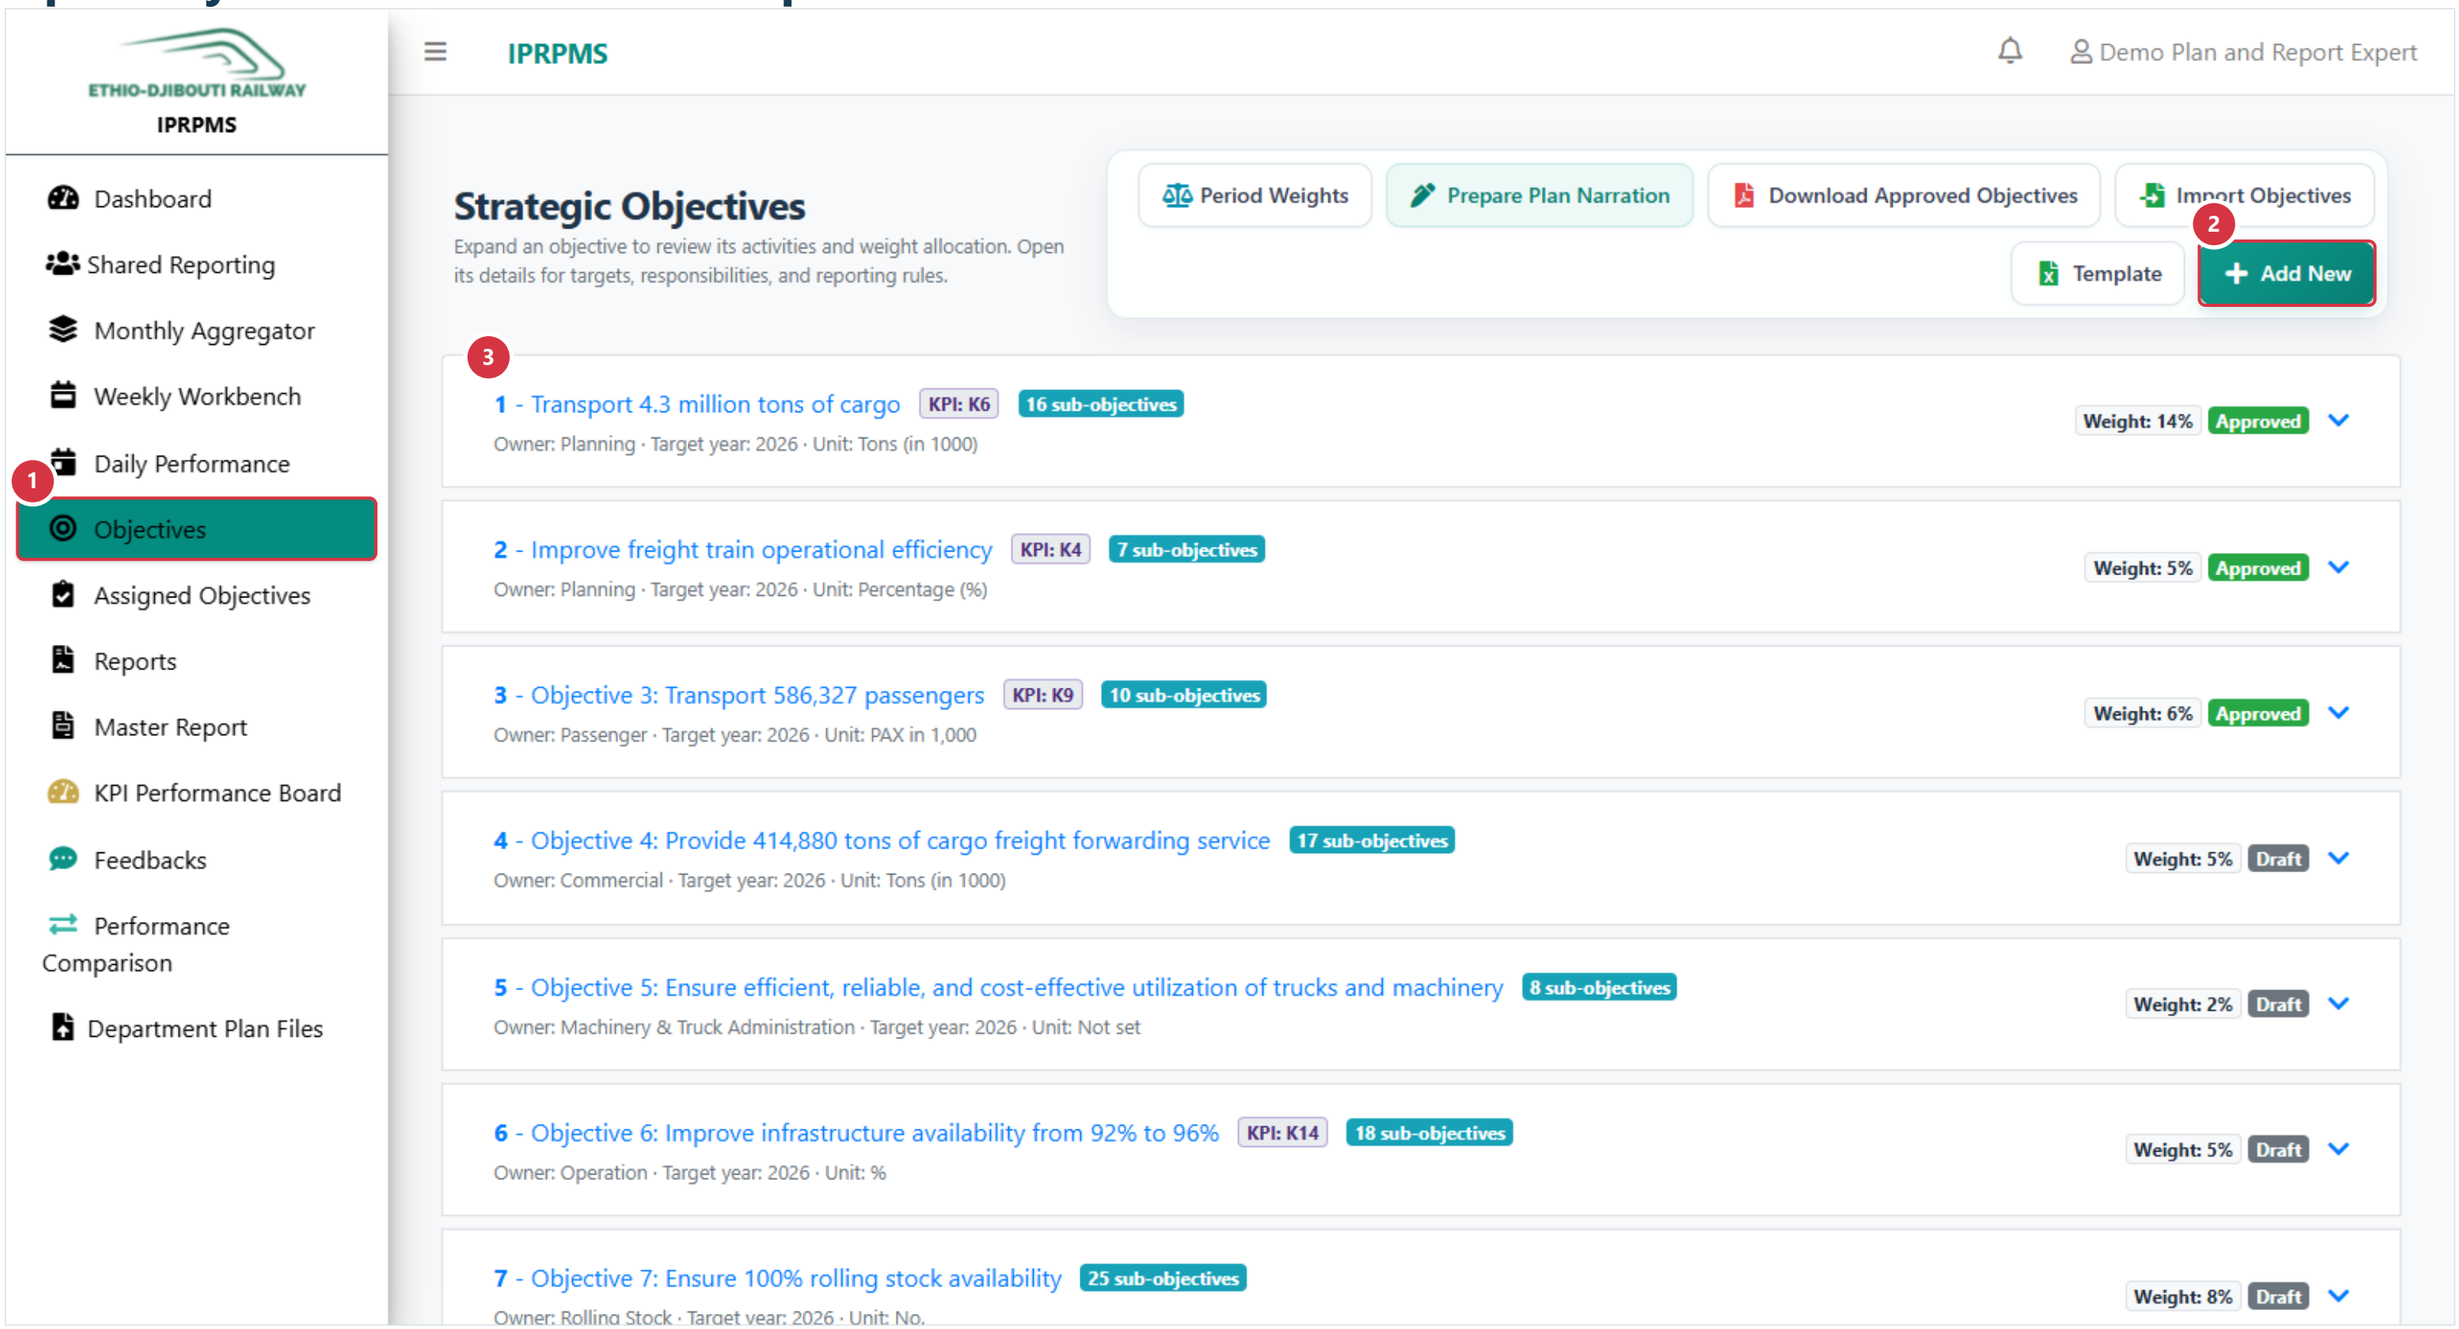

When the screen differs

Menus depend on your role, department, current status and reporting frequency. Some shared account screens show a demonstration Expert; review-only examples are labelled rather than pretending they are your account.

Scope and safety

All captures come from the actual local app with demonstration accounts and performance. No real passwords or private performance are shown. The separate logistics Import/Export module is intentionally excluded.

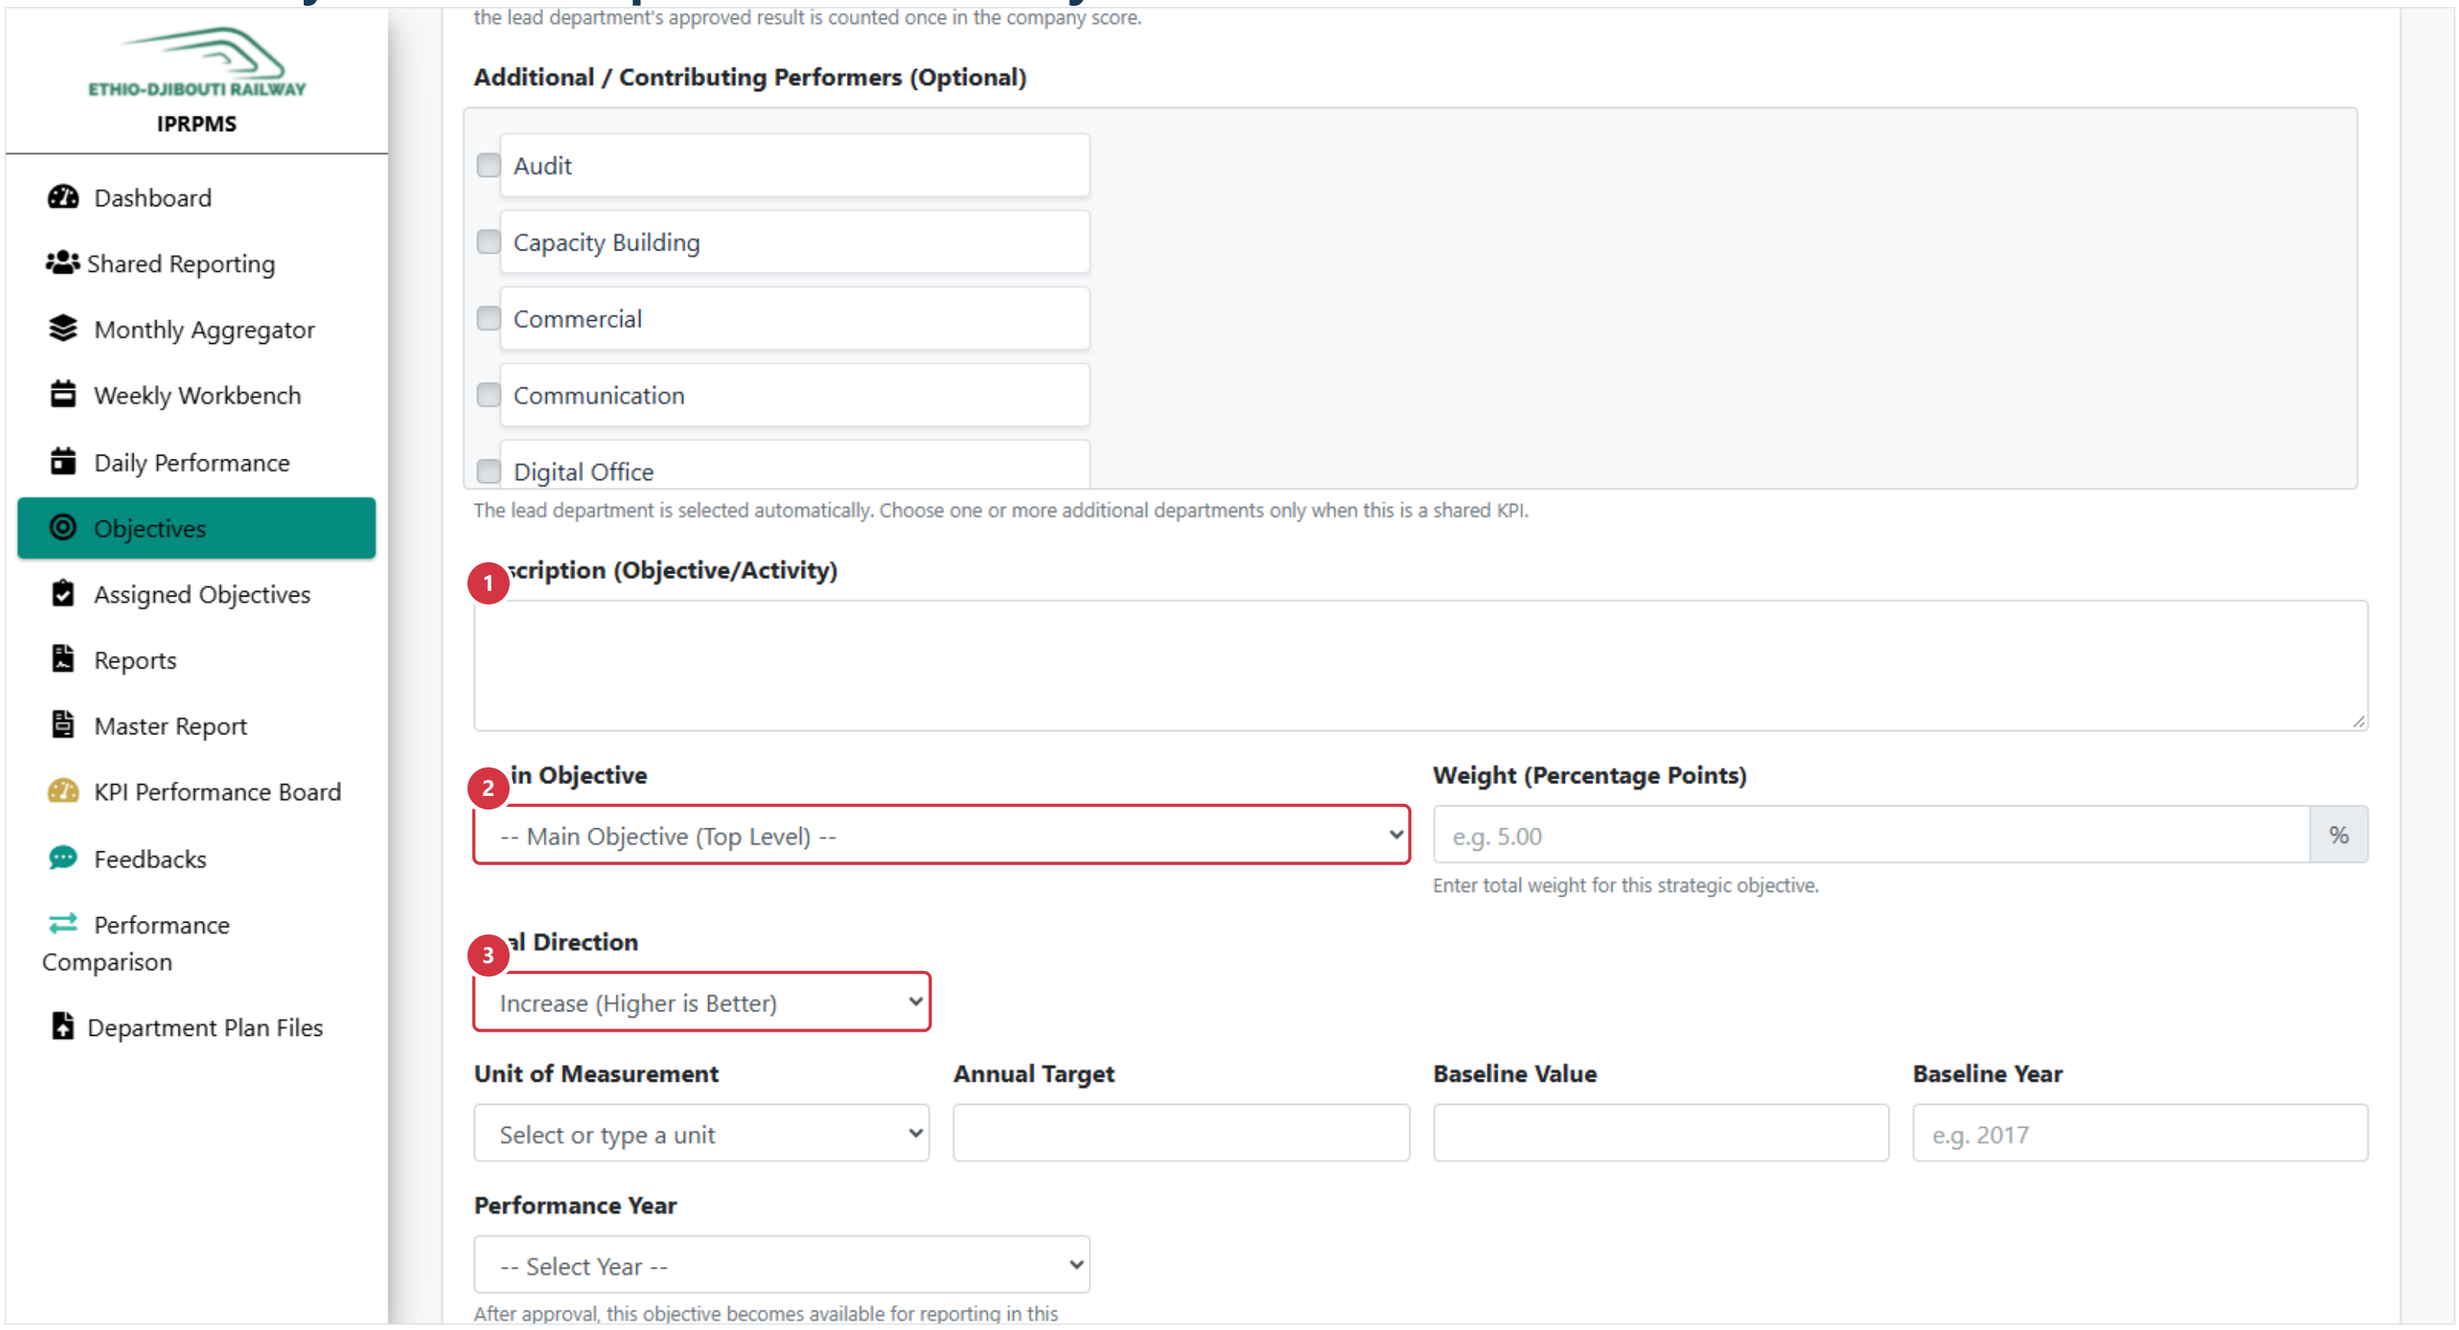

Open objectives and start a new plan item

1. Click Objectives in the sidebar.
2. Click Add New to open the objective form.
3. Use the expand control on an existing objective to see its sub objectives.

After this step: Draft items remain editable before submission.

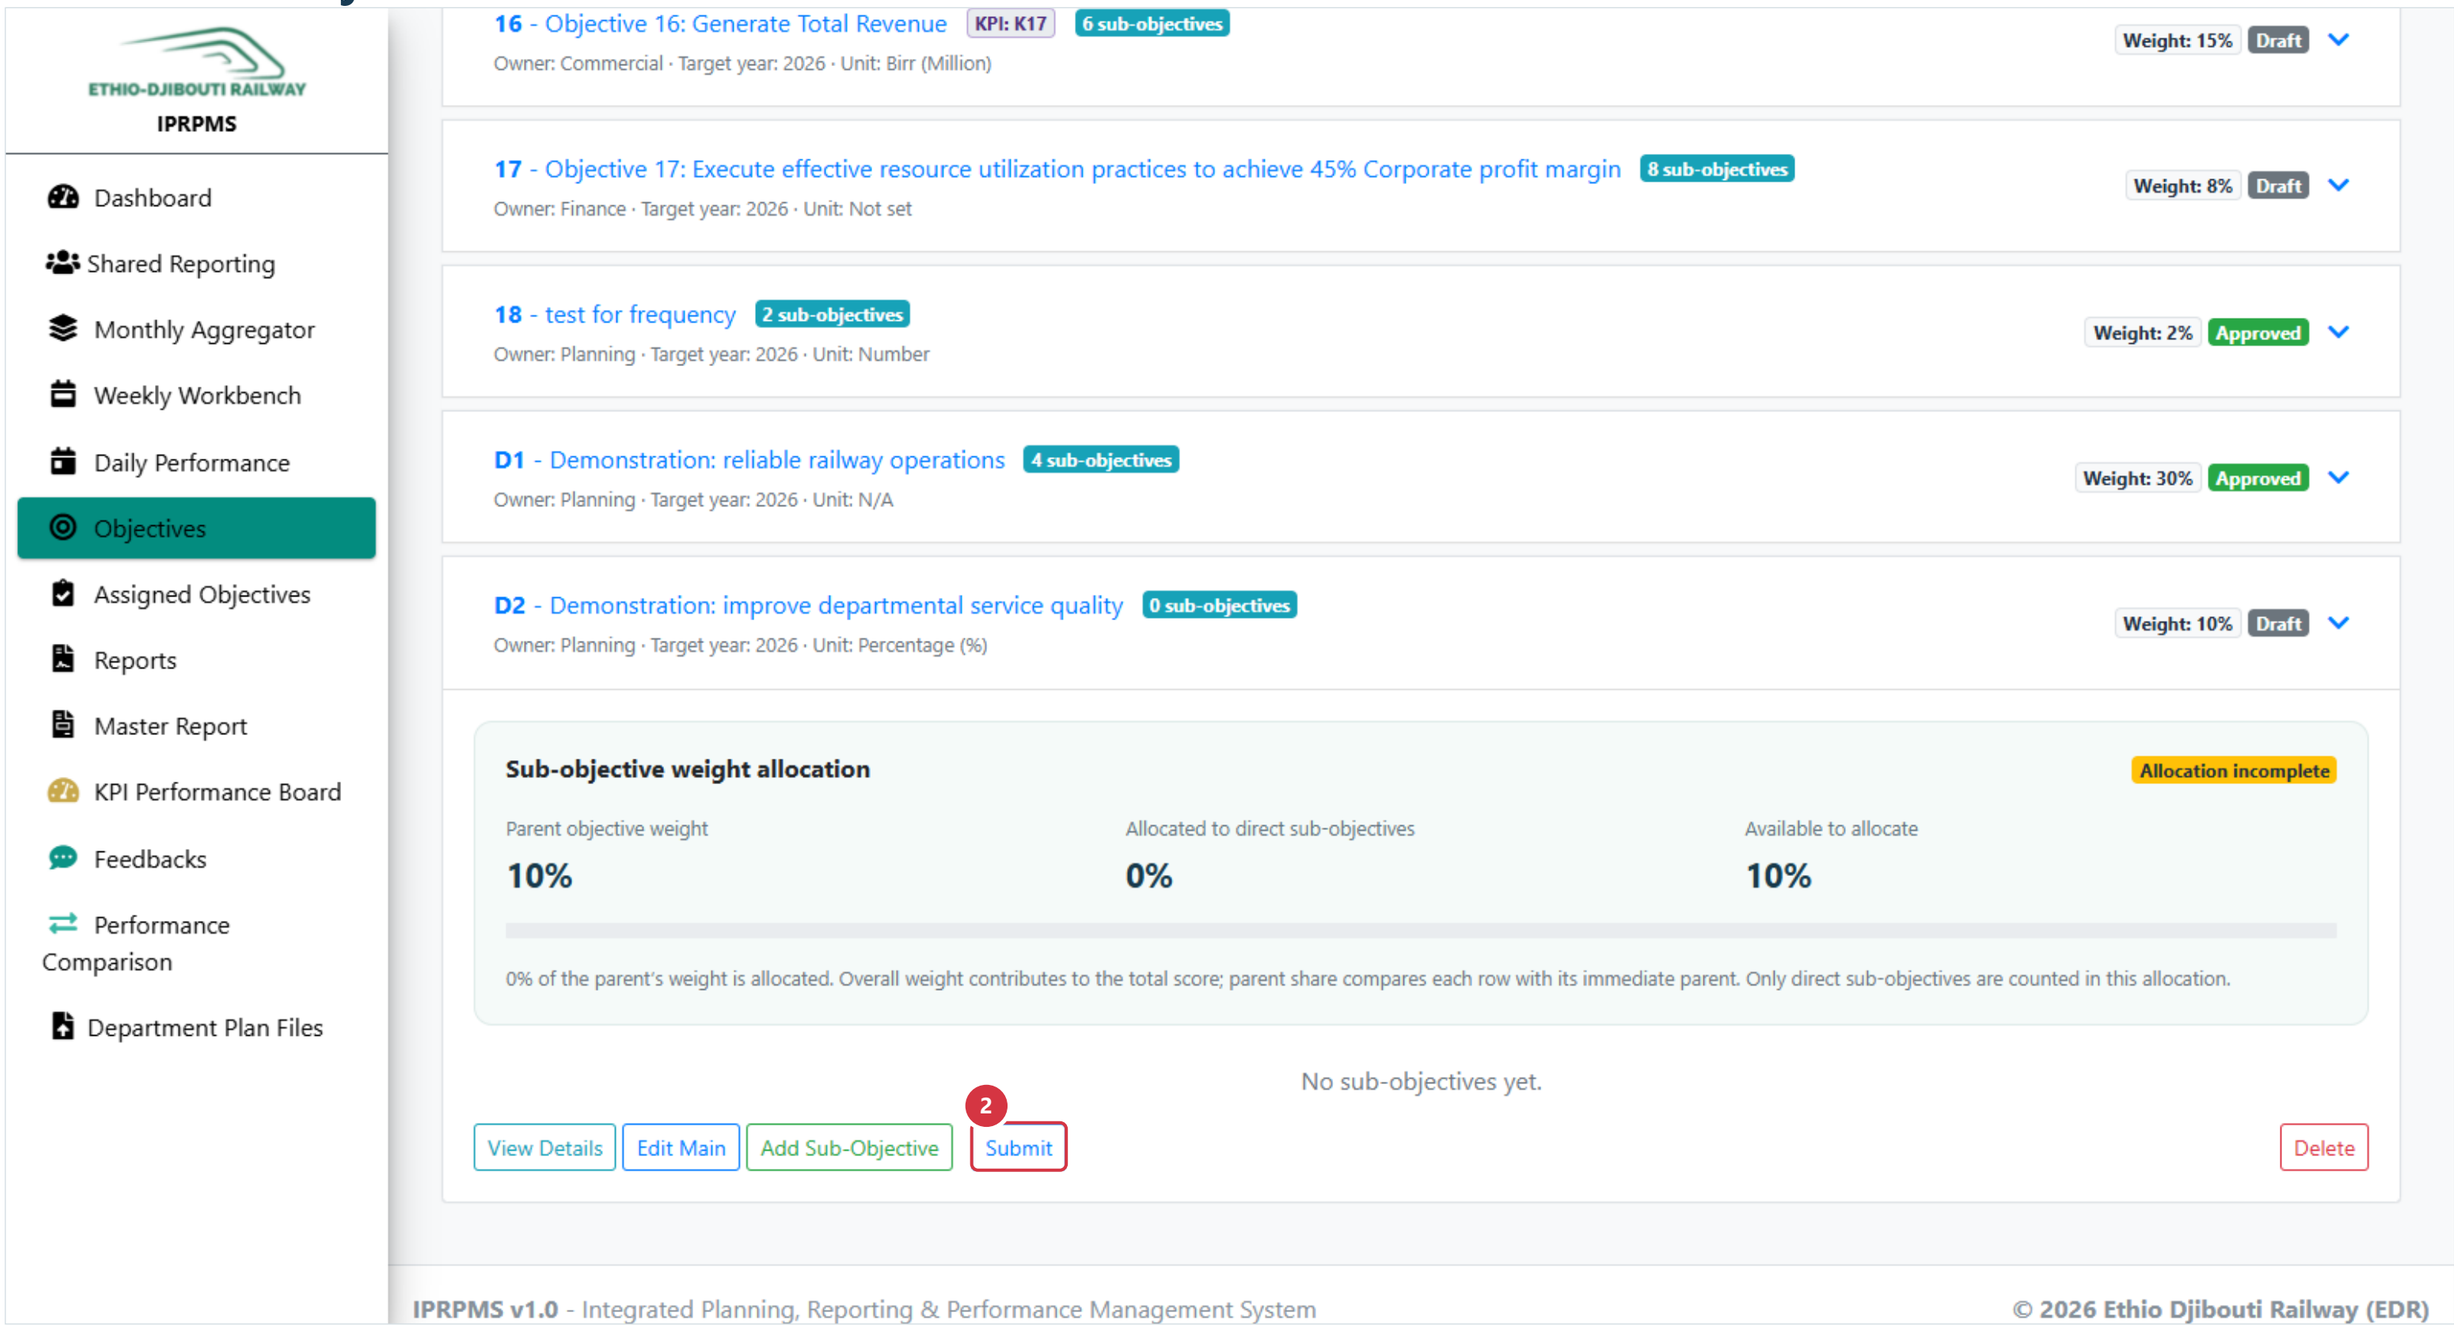

Create an objective: description and hierarchy

1. Enter a clear Description (Objective/Activity).
2. Leave Main Objective at Top Level for a main objective, or select the correct existing main objective.
3. Set the weight and Goal Direction according to the approved definition.

After this step: Increase means higher is better. Decrease means lower is better. Sub objective weight uses its main objective allocation.

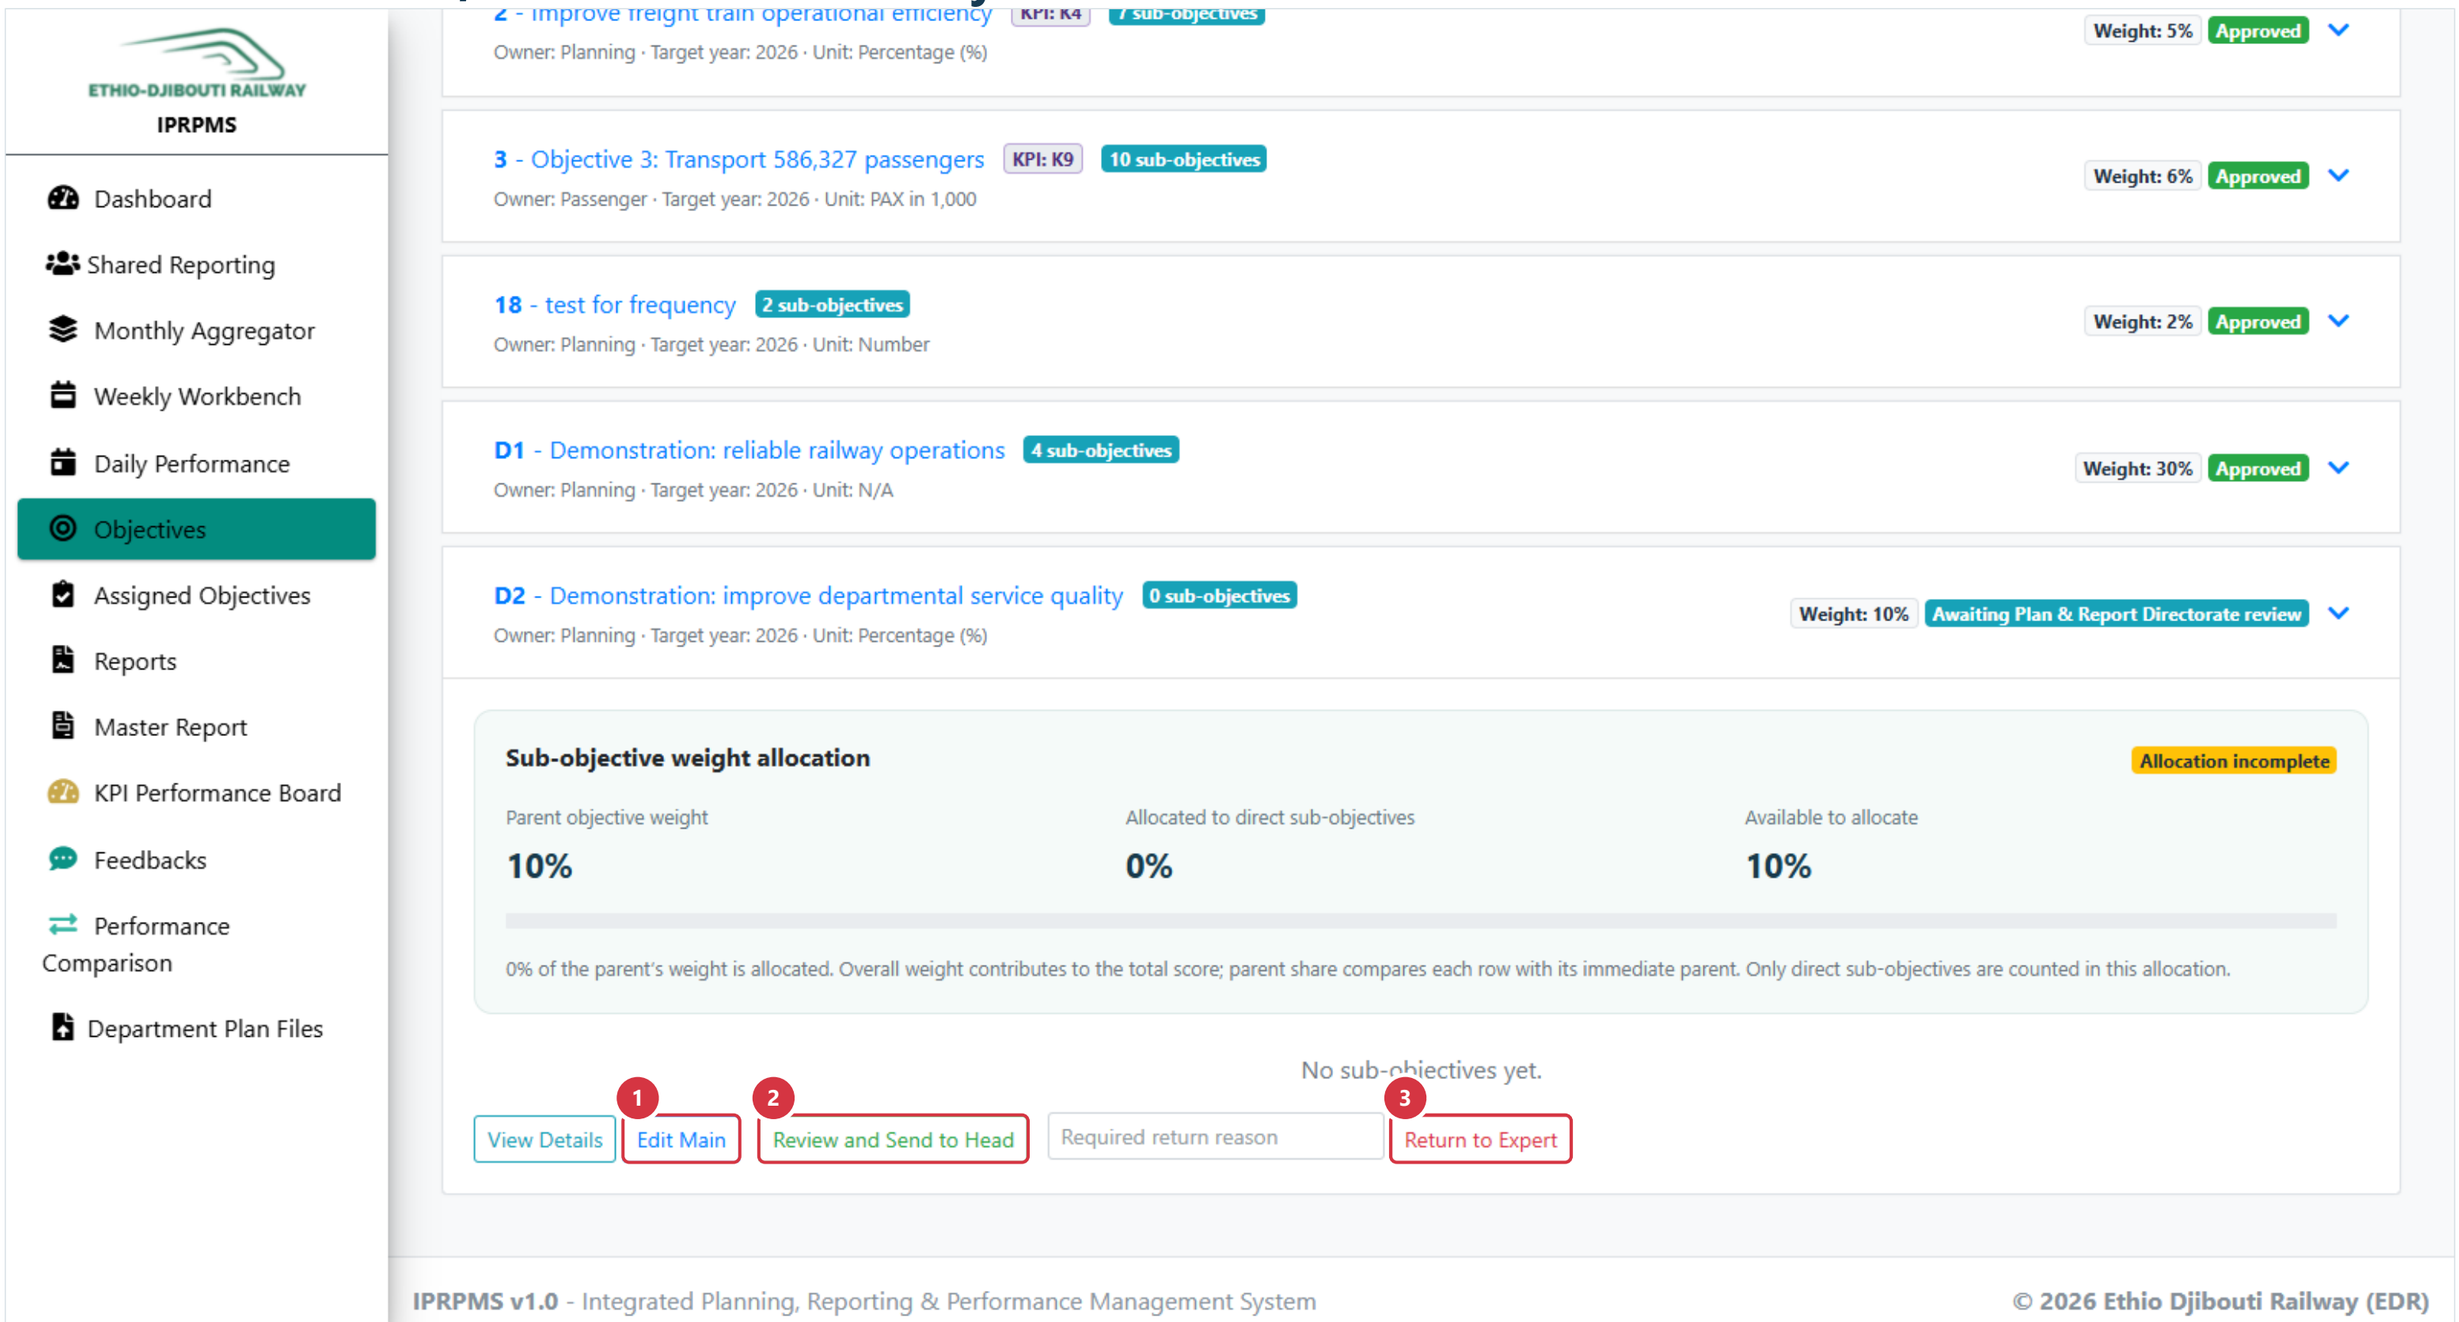

Submit the objective for Directorate review

1. Expand the completed draft.
2. Click Submit.
3. Confirm the submission in the confirmation dialog.

After this step: The objective moves to Submitted to Plan Report Directorate. The Expert can request recall if further edits are needed.

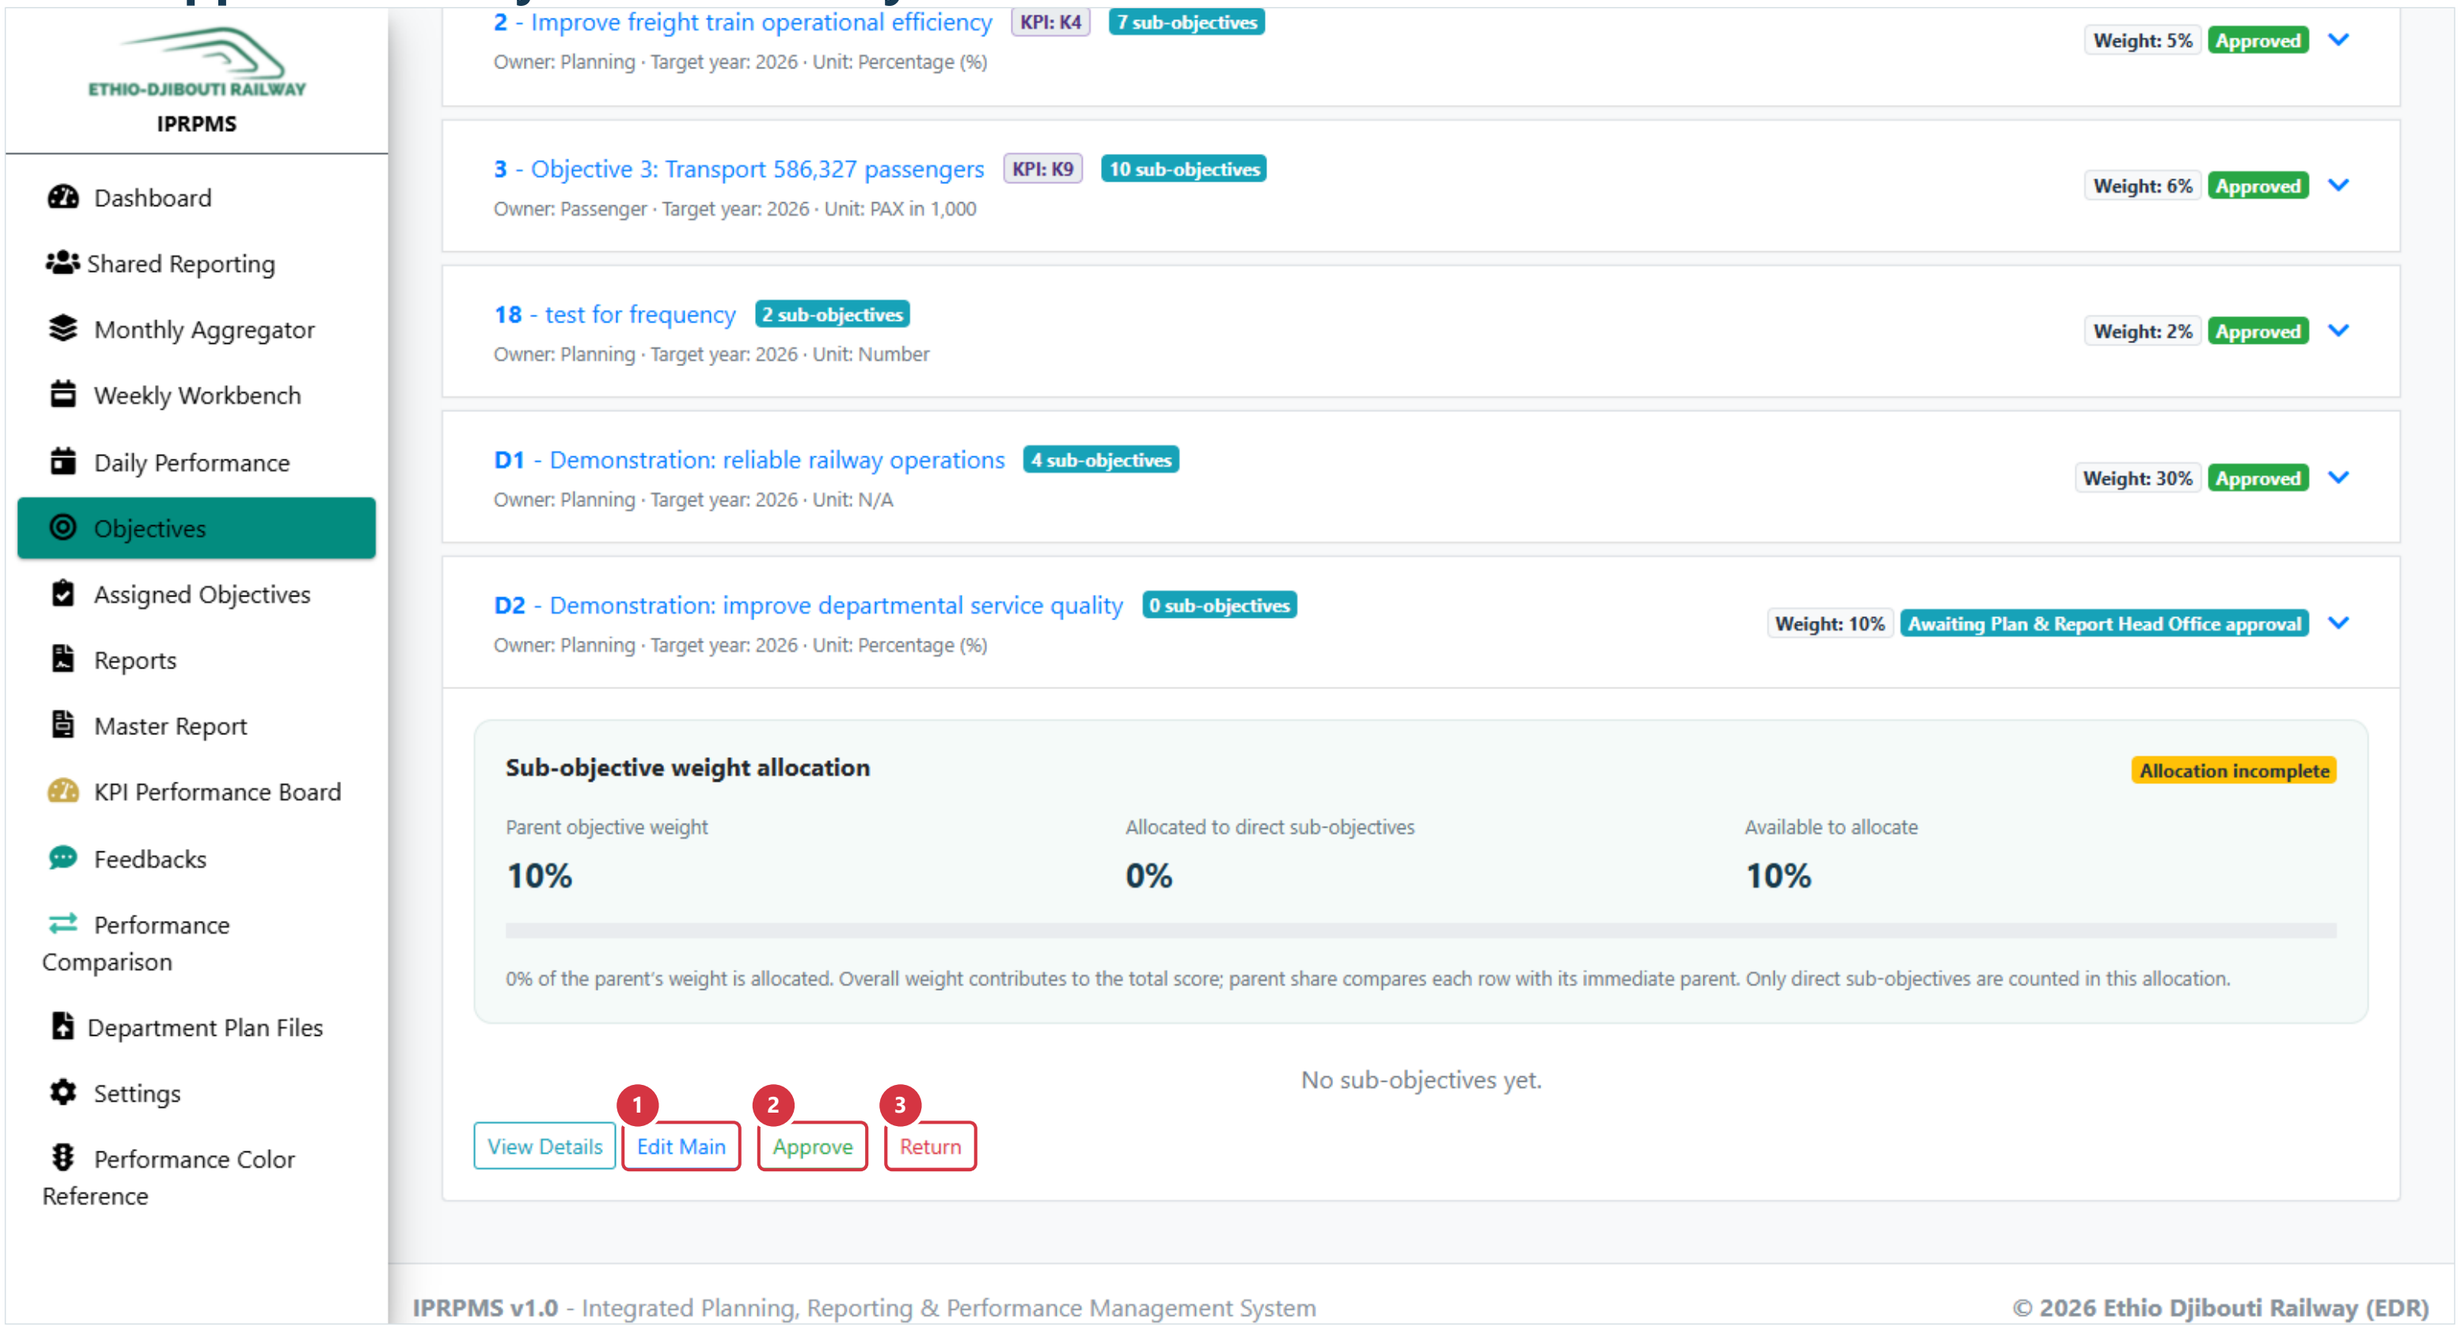

Directorate: review, edit or return the objective

1. Use Edit Main when the submitted objective needs a permitted correction.
2. Click Review and Send to Head when it is ready.
3. To return it, enter a Required return reason and click Return to Expert.

After this step: The Directorate uses Objectives for this planning review. Assigned Objectives is the department assignment workflow.

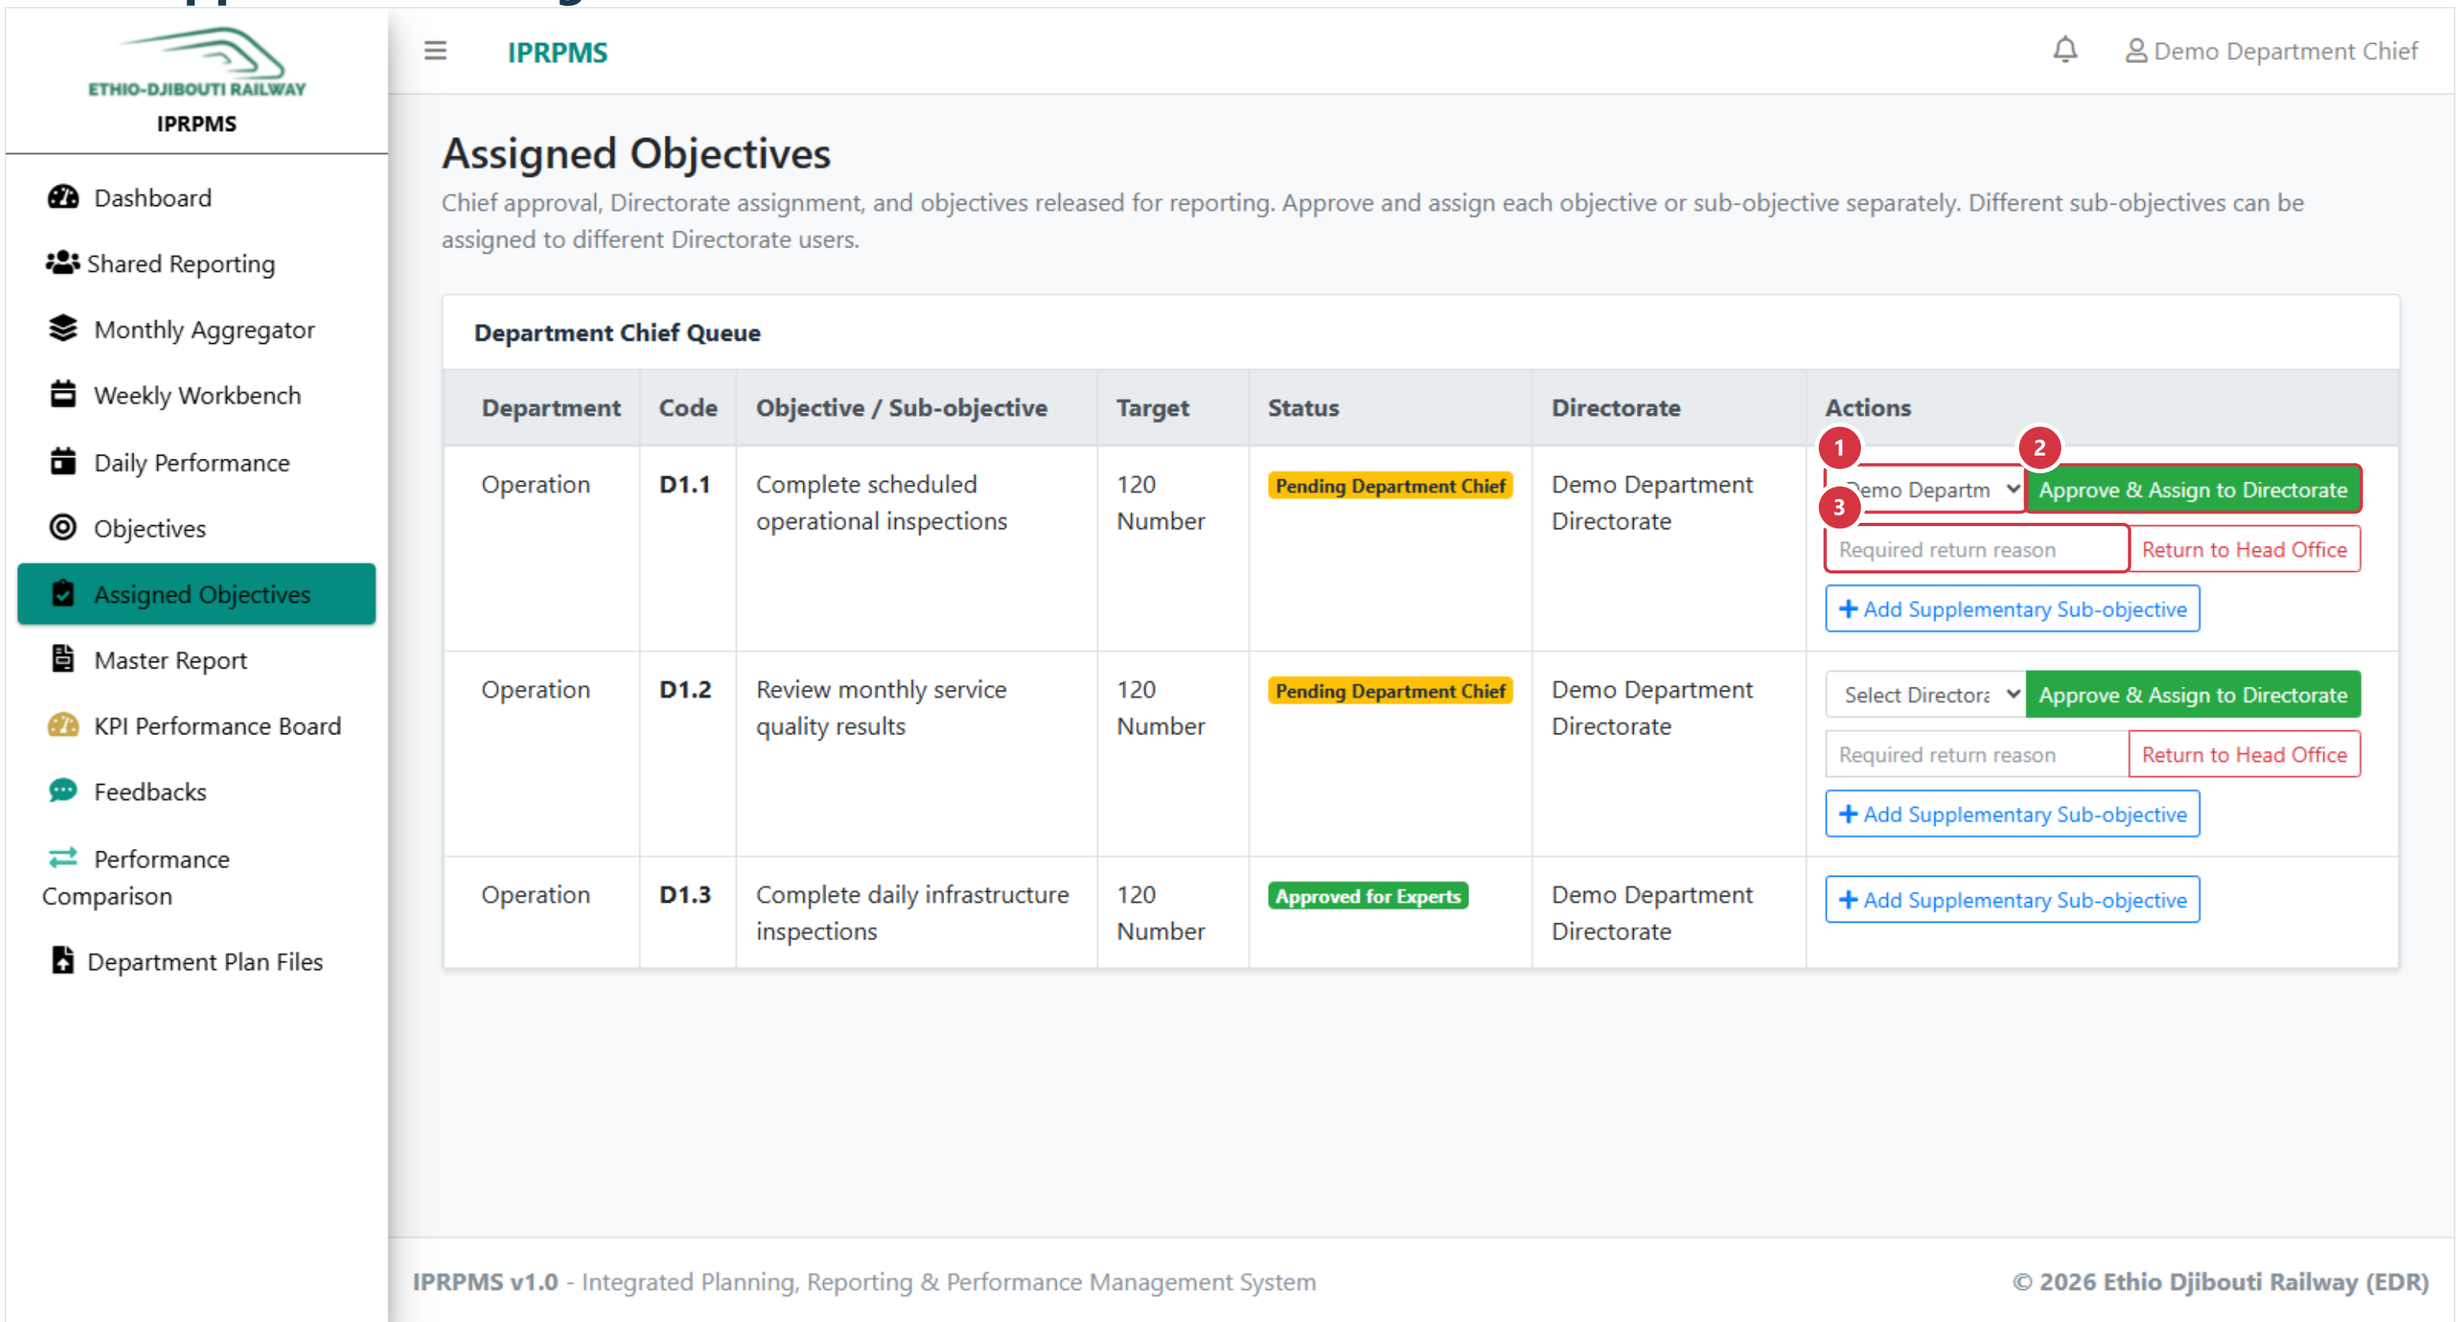

Chief: approve the objective hierarchy

1. Review the objective and use Edit Main when a permitted correction is needed.
2. Click Approve and confirm when the hierarchy is correct.
3. Use Return to request a correction with an explanatory comment.

After this step: Final objective approval publishes the assigned plan items to the performer departments.

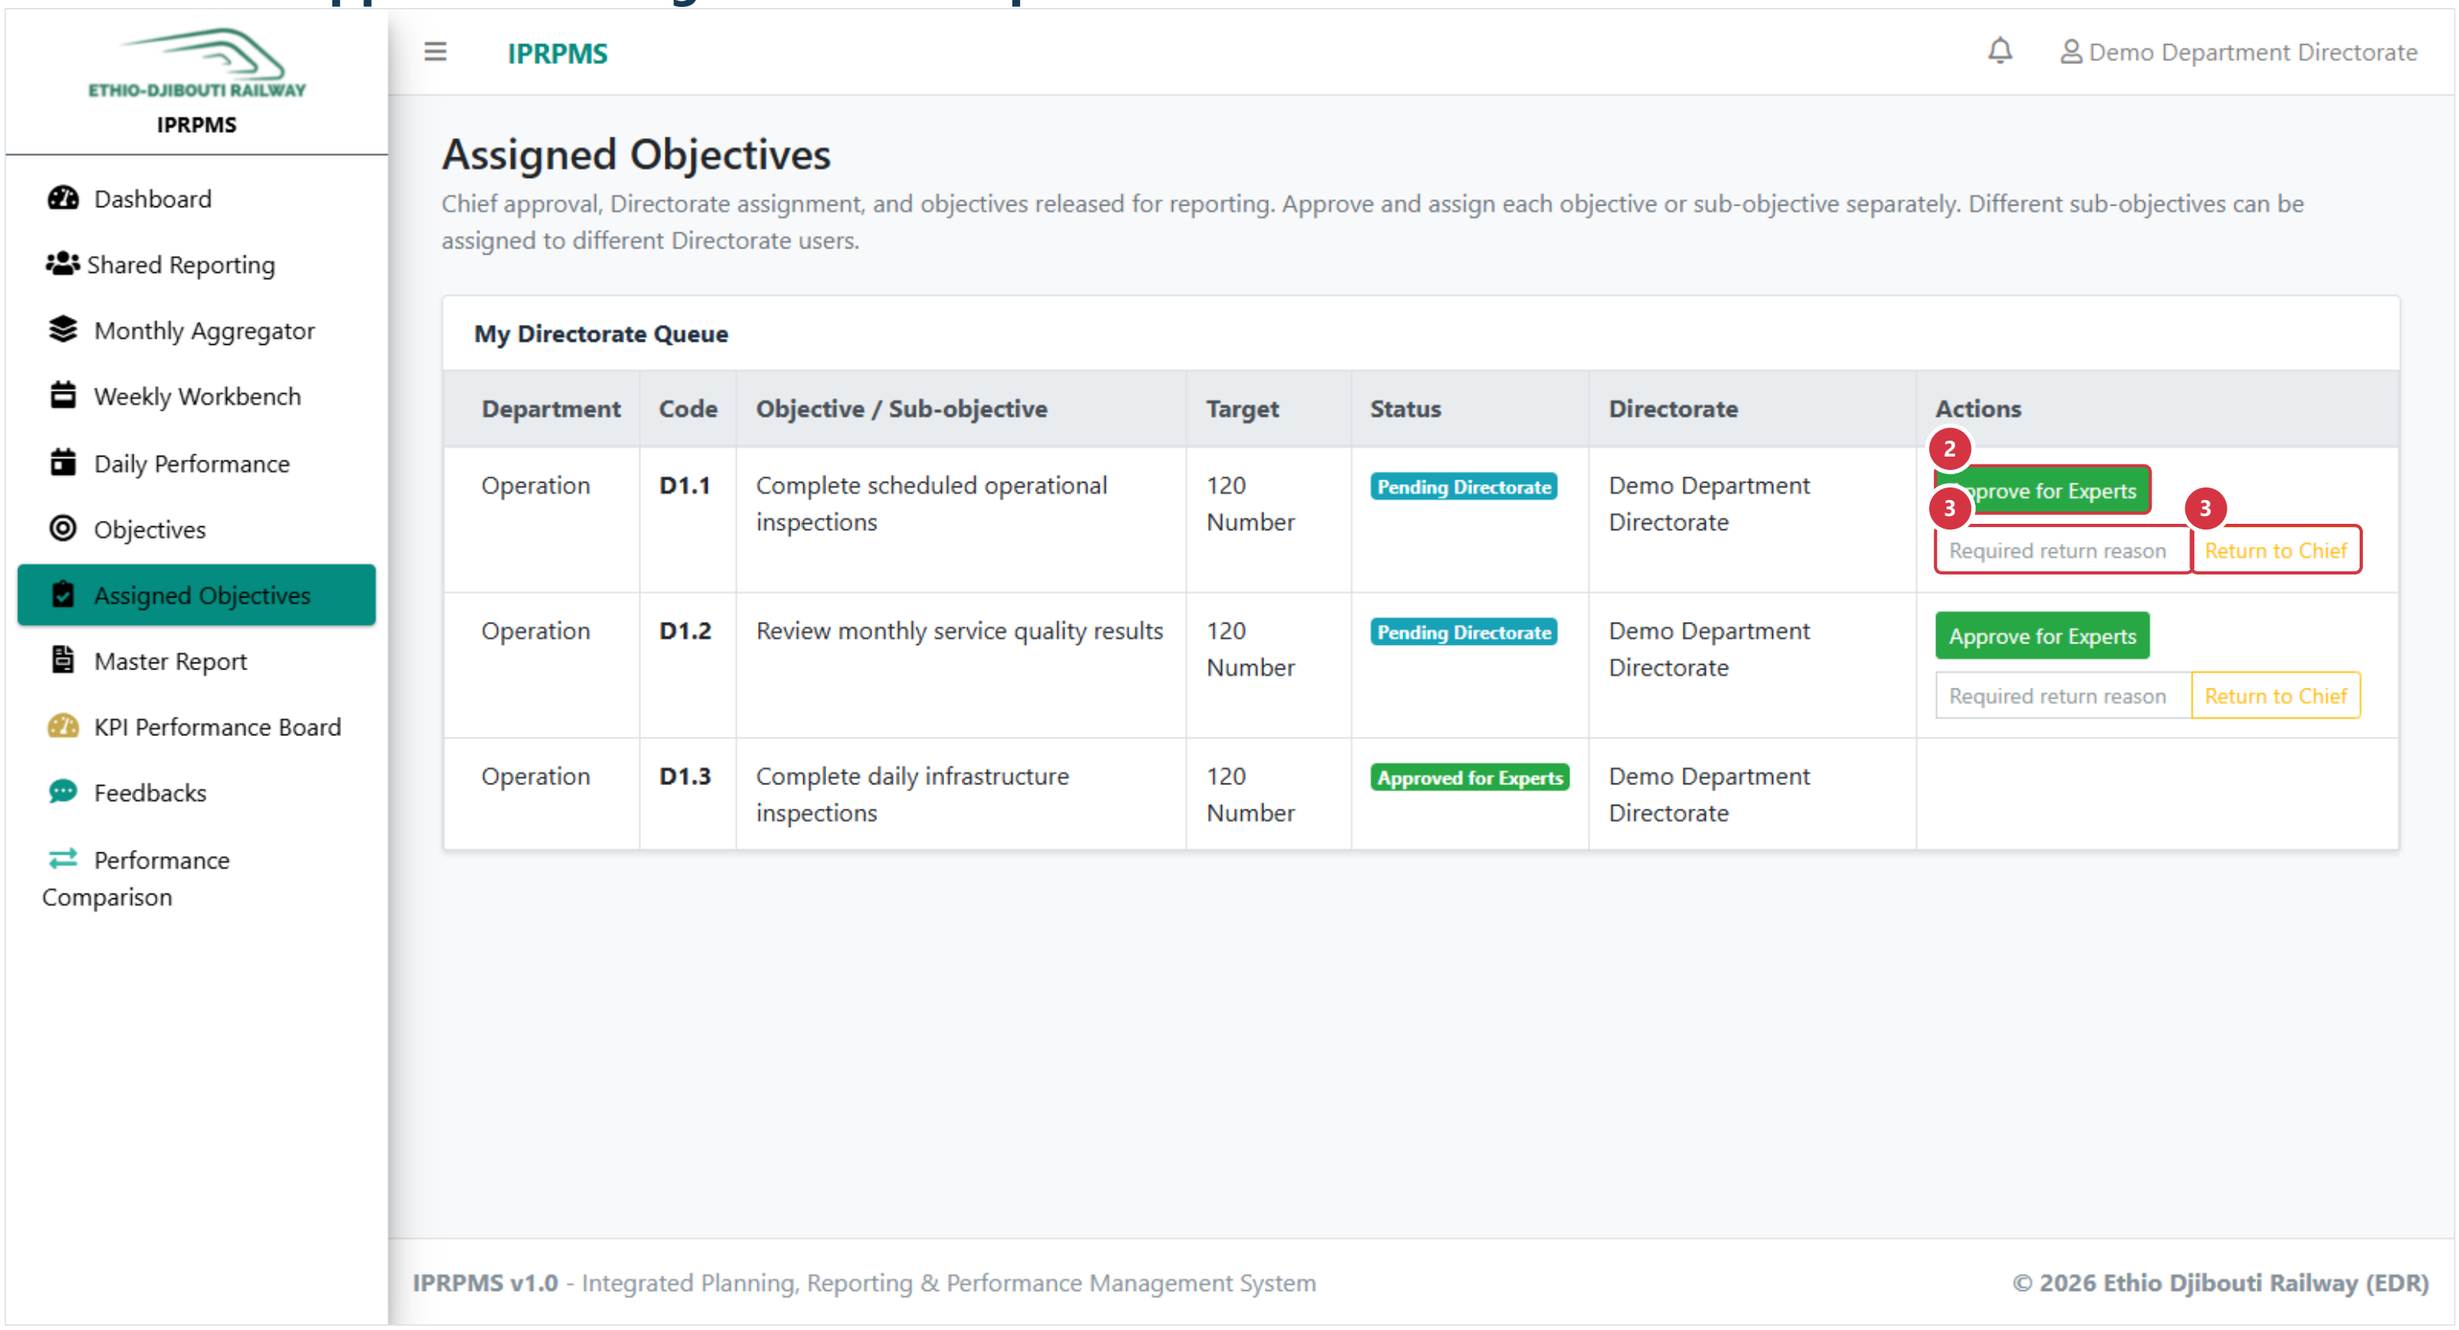

Chief: approve and assign to a Directorate

1. Select the responsible Directorate user.
2. Click Approve & Assign to Directorate on that row.
3. To return an unsuitable assignment, enter a Required return reason and click Return to Head Office.

After this step: The selected Directorate receives the assignment for its own approval.

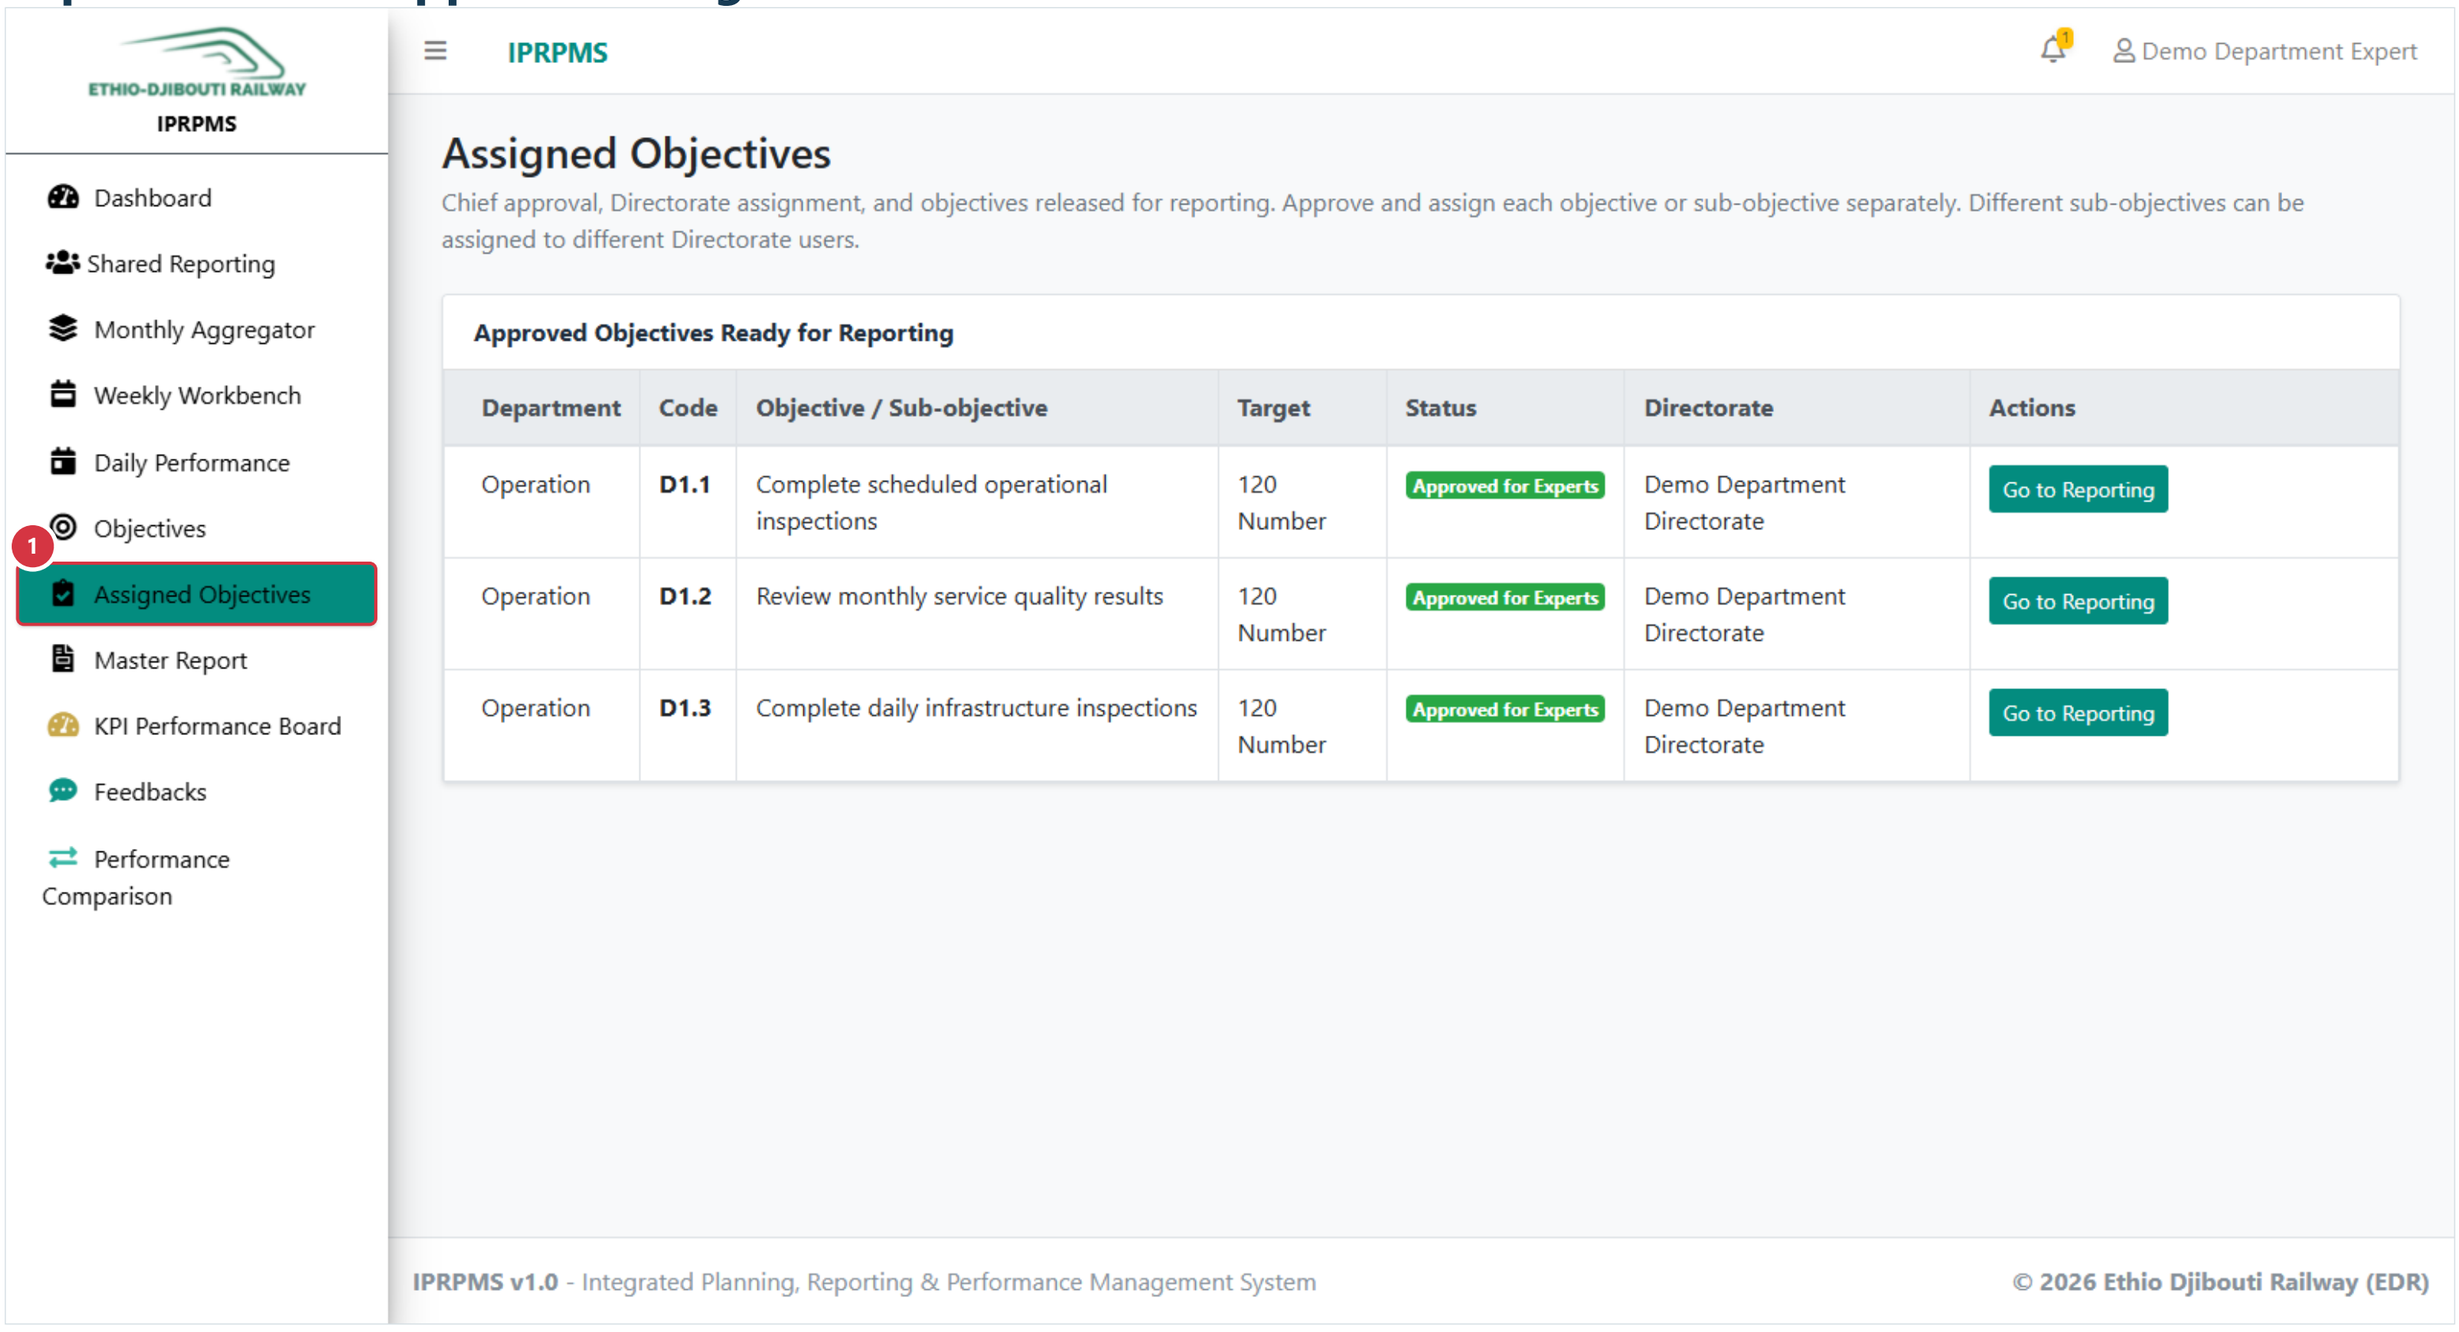

Directorate: approve an assignment for Experts

1. Open Assigned Objectives and review the assigned activity.
2. Click Approve for Experts when responsibility and targets are correct.
3. Otherwise enter a reason and click Return to Chief.

After this step: Only assignments approved for Experts appear in their departmental reporting scope.

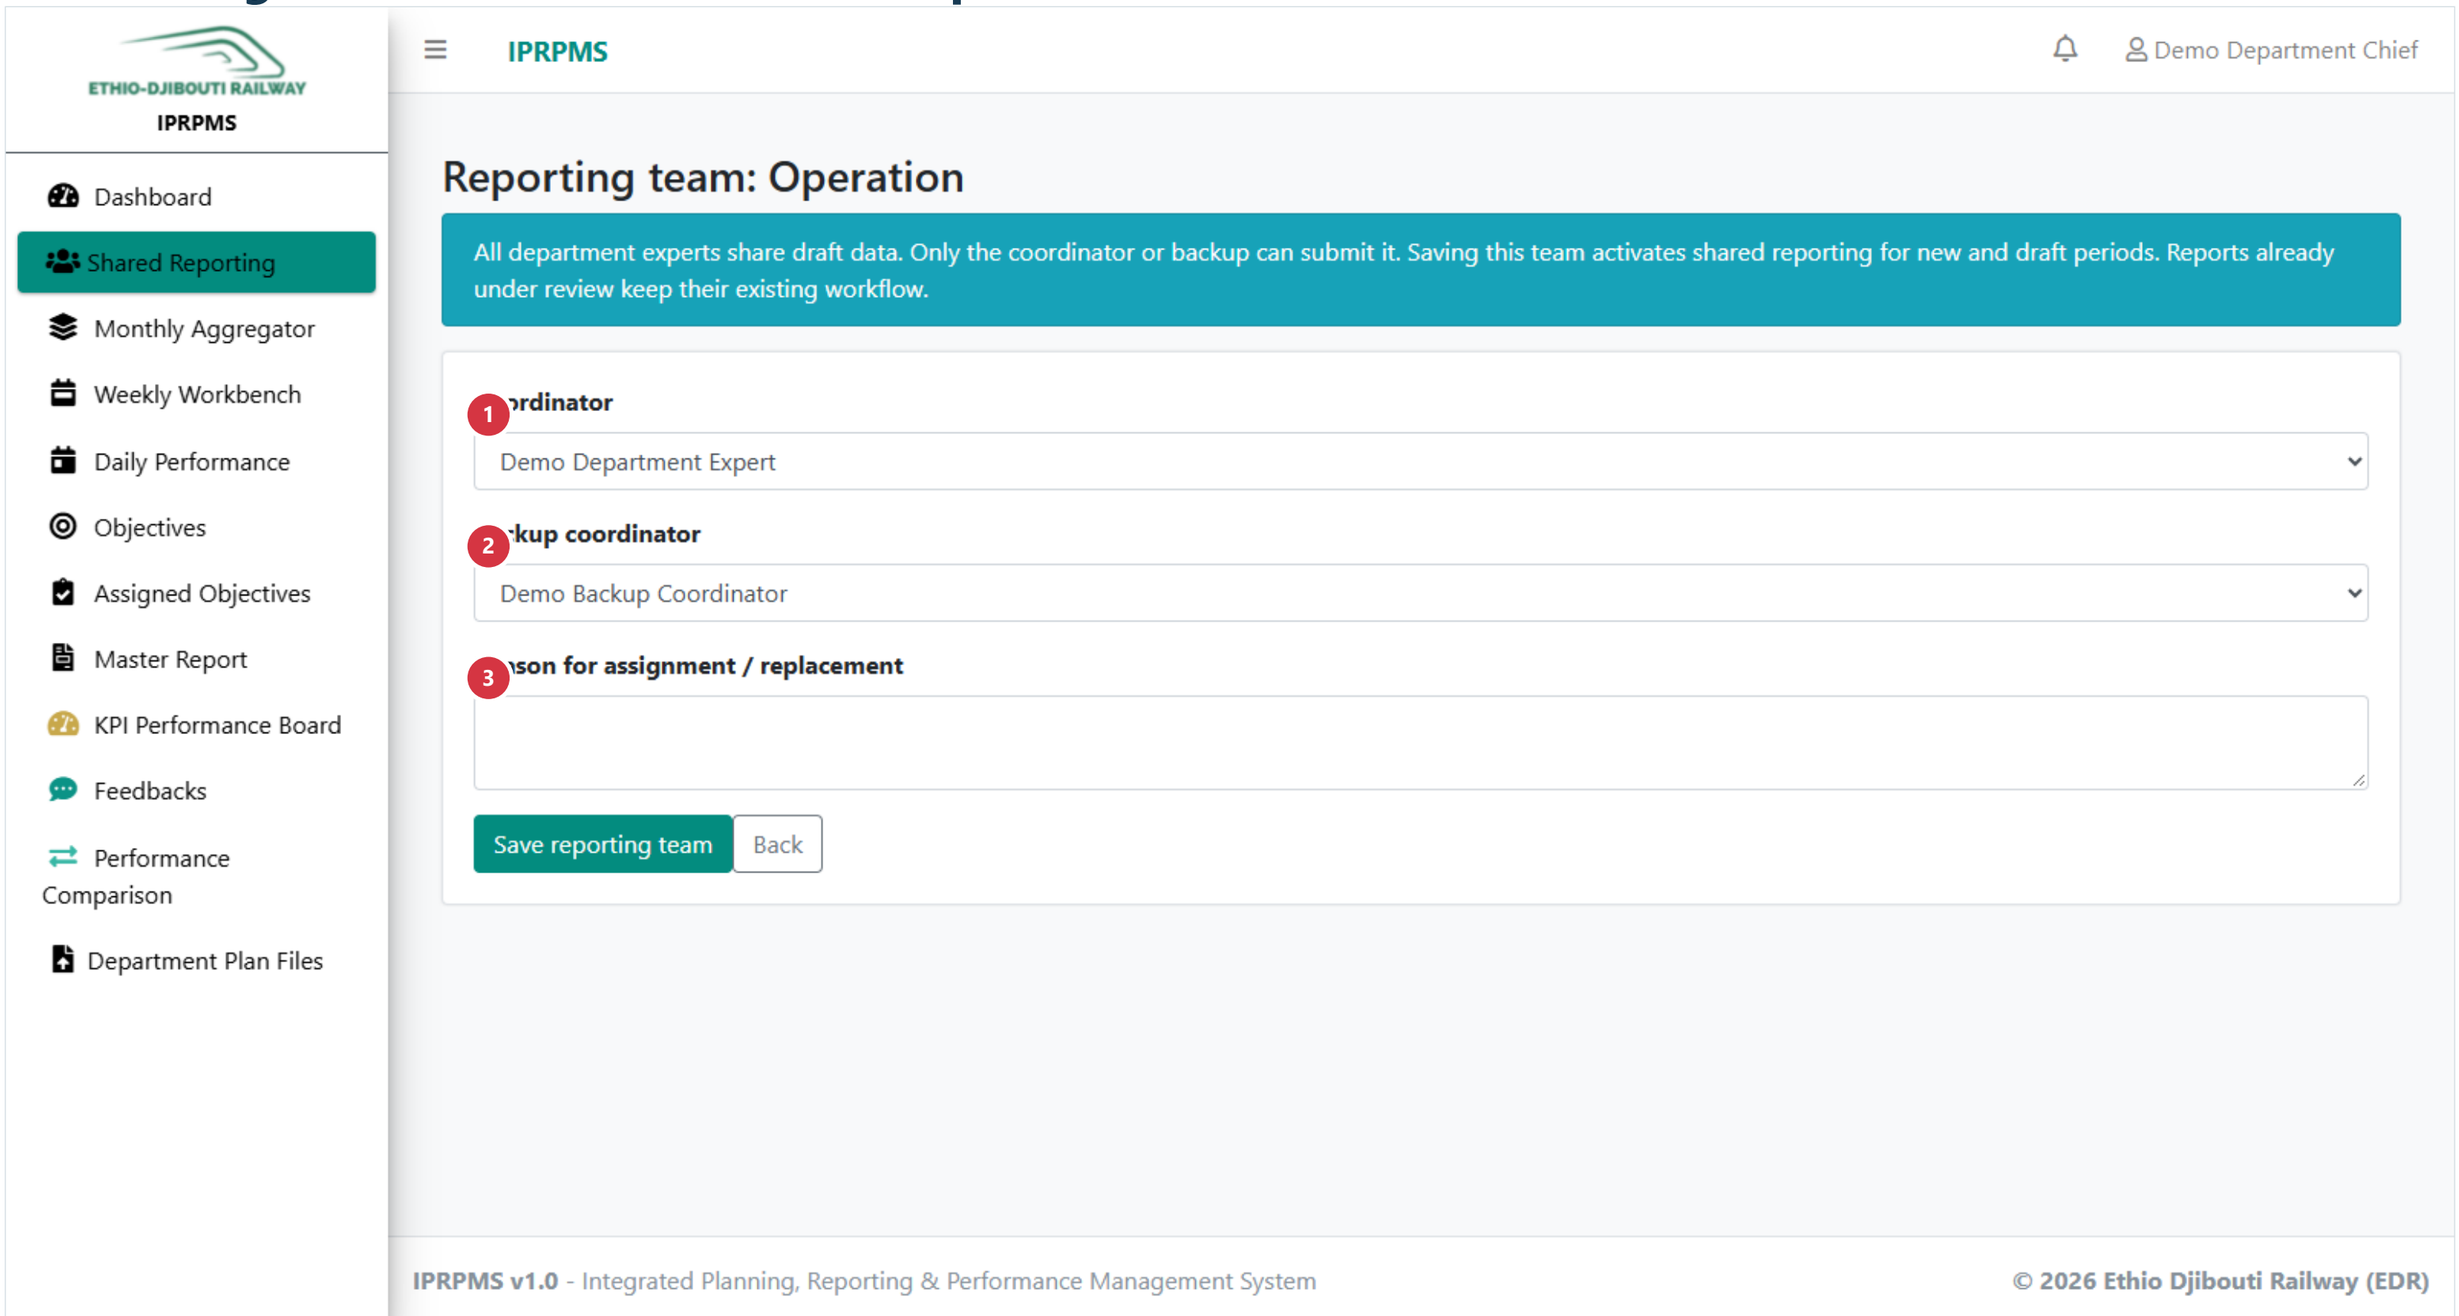

Expert: confirm approved assignments

1. Open Assigned Objectives.
2. Confirm the activity is approved for Experts.
3. Read its target and unit, then open the reporting module for its frequency.

After this step: The assignment screen confirms what your department is responsible for reporting.

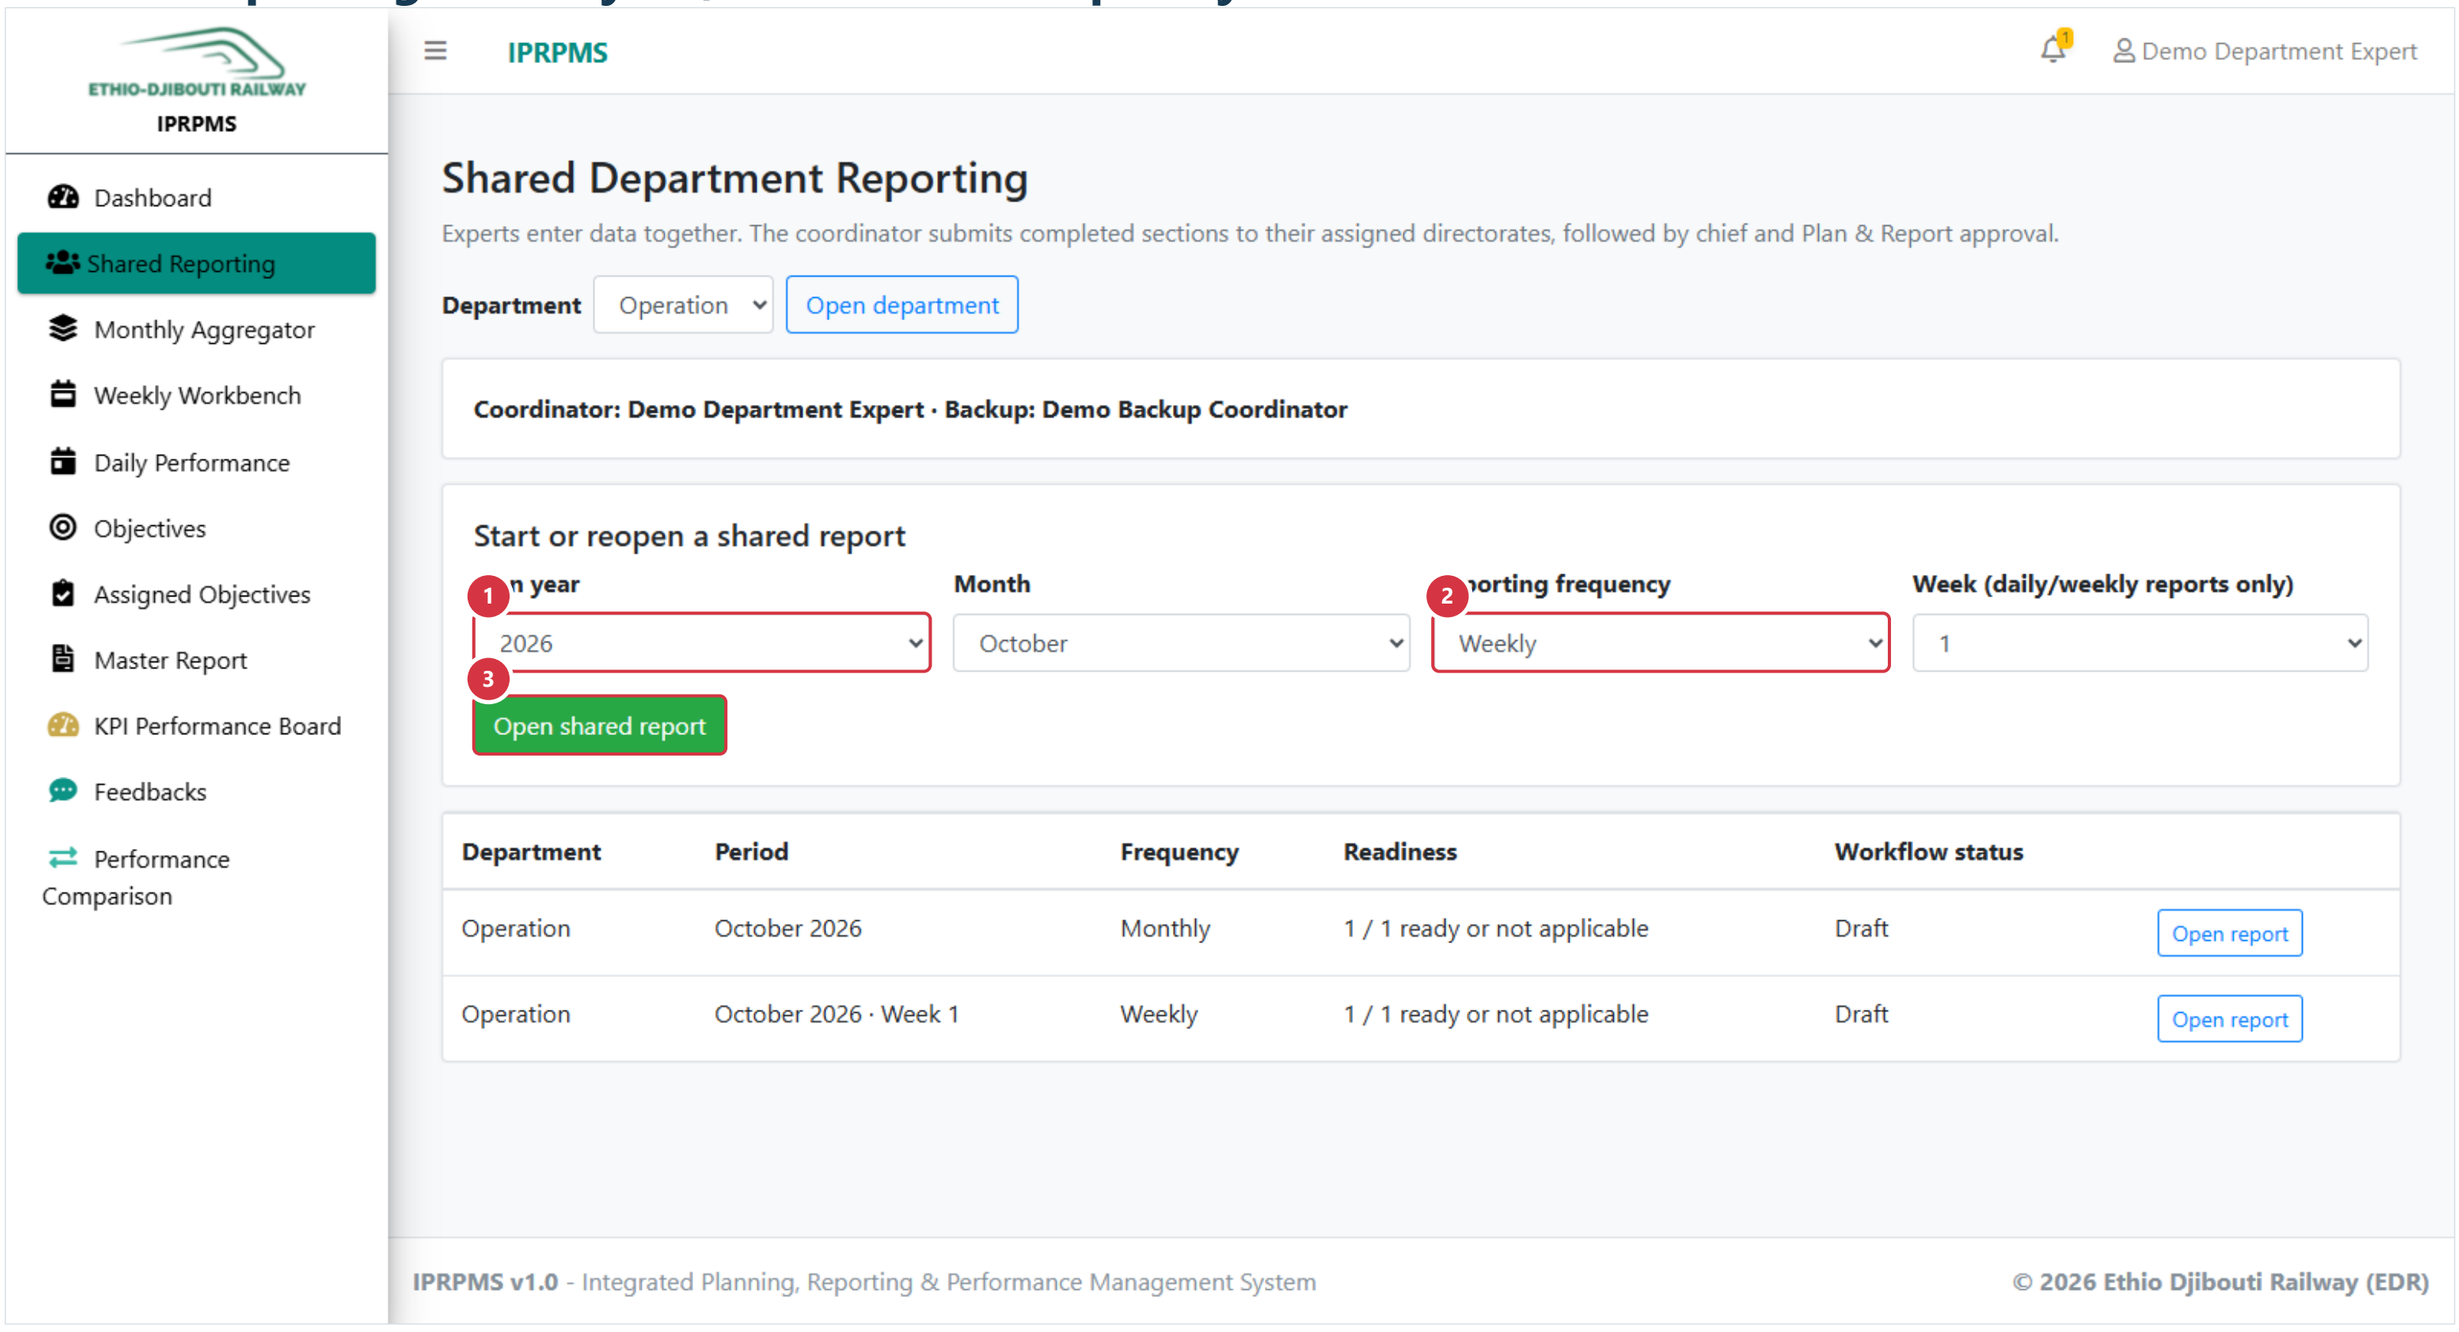

Chief: assign the coordinator and backup

1. Select the primary coordinator.
2. Select a different active Expert as backup.
3. Enter the assignment/change reason and save the reporting team.

After this step: Coordinator and backup are responsibilities assigned to Department Experts. They can submit the shared report.

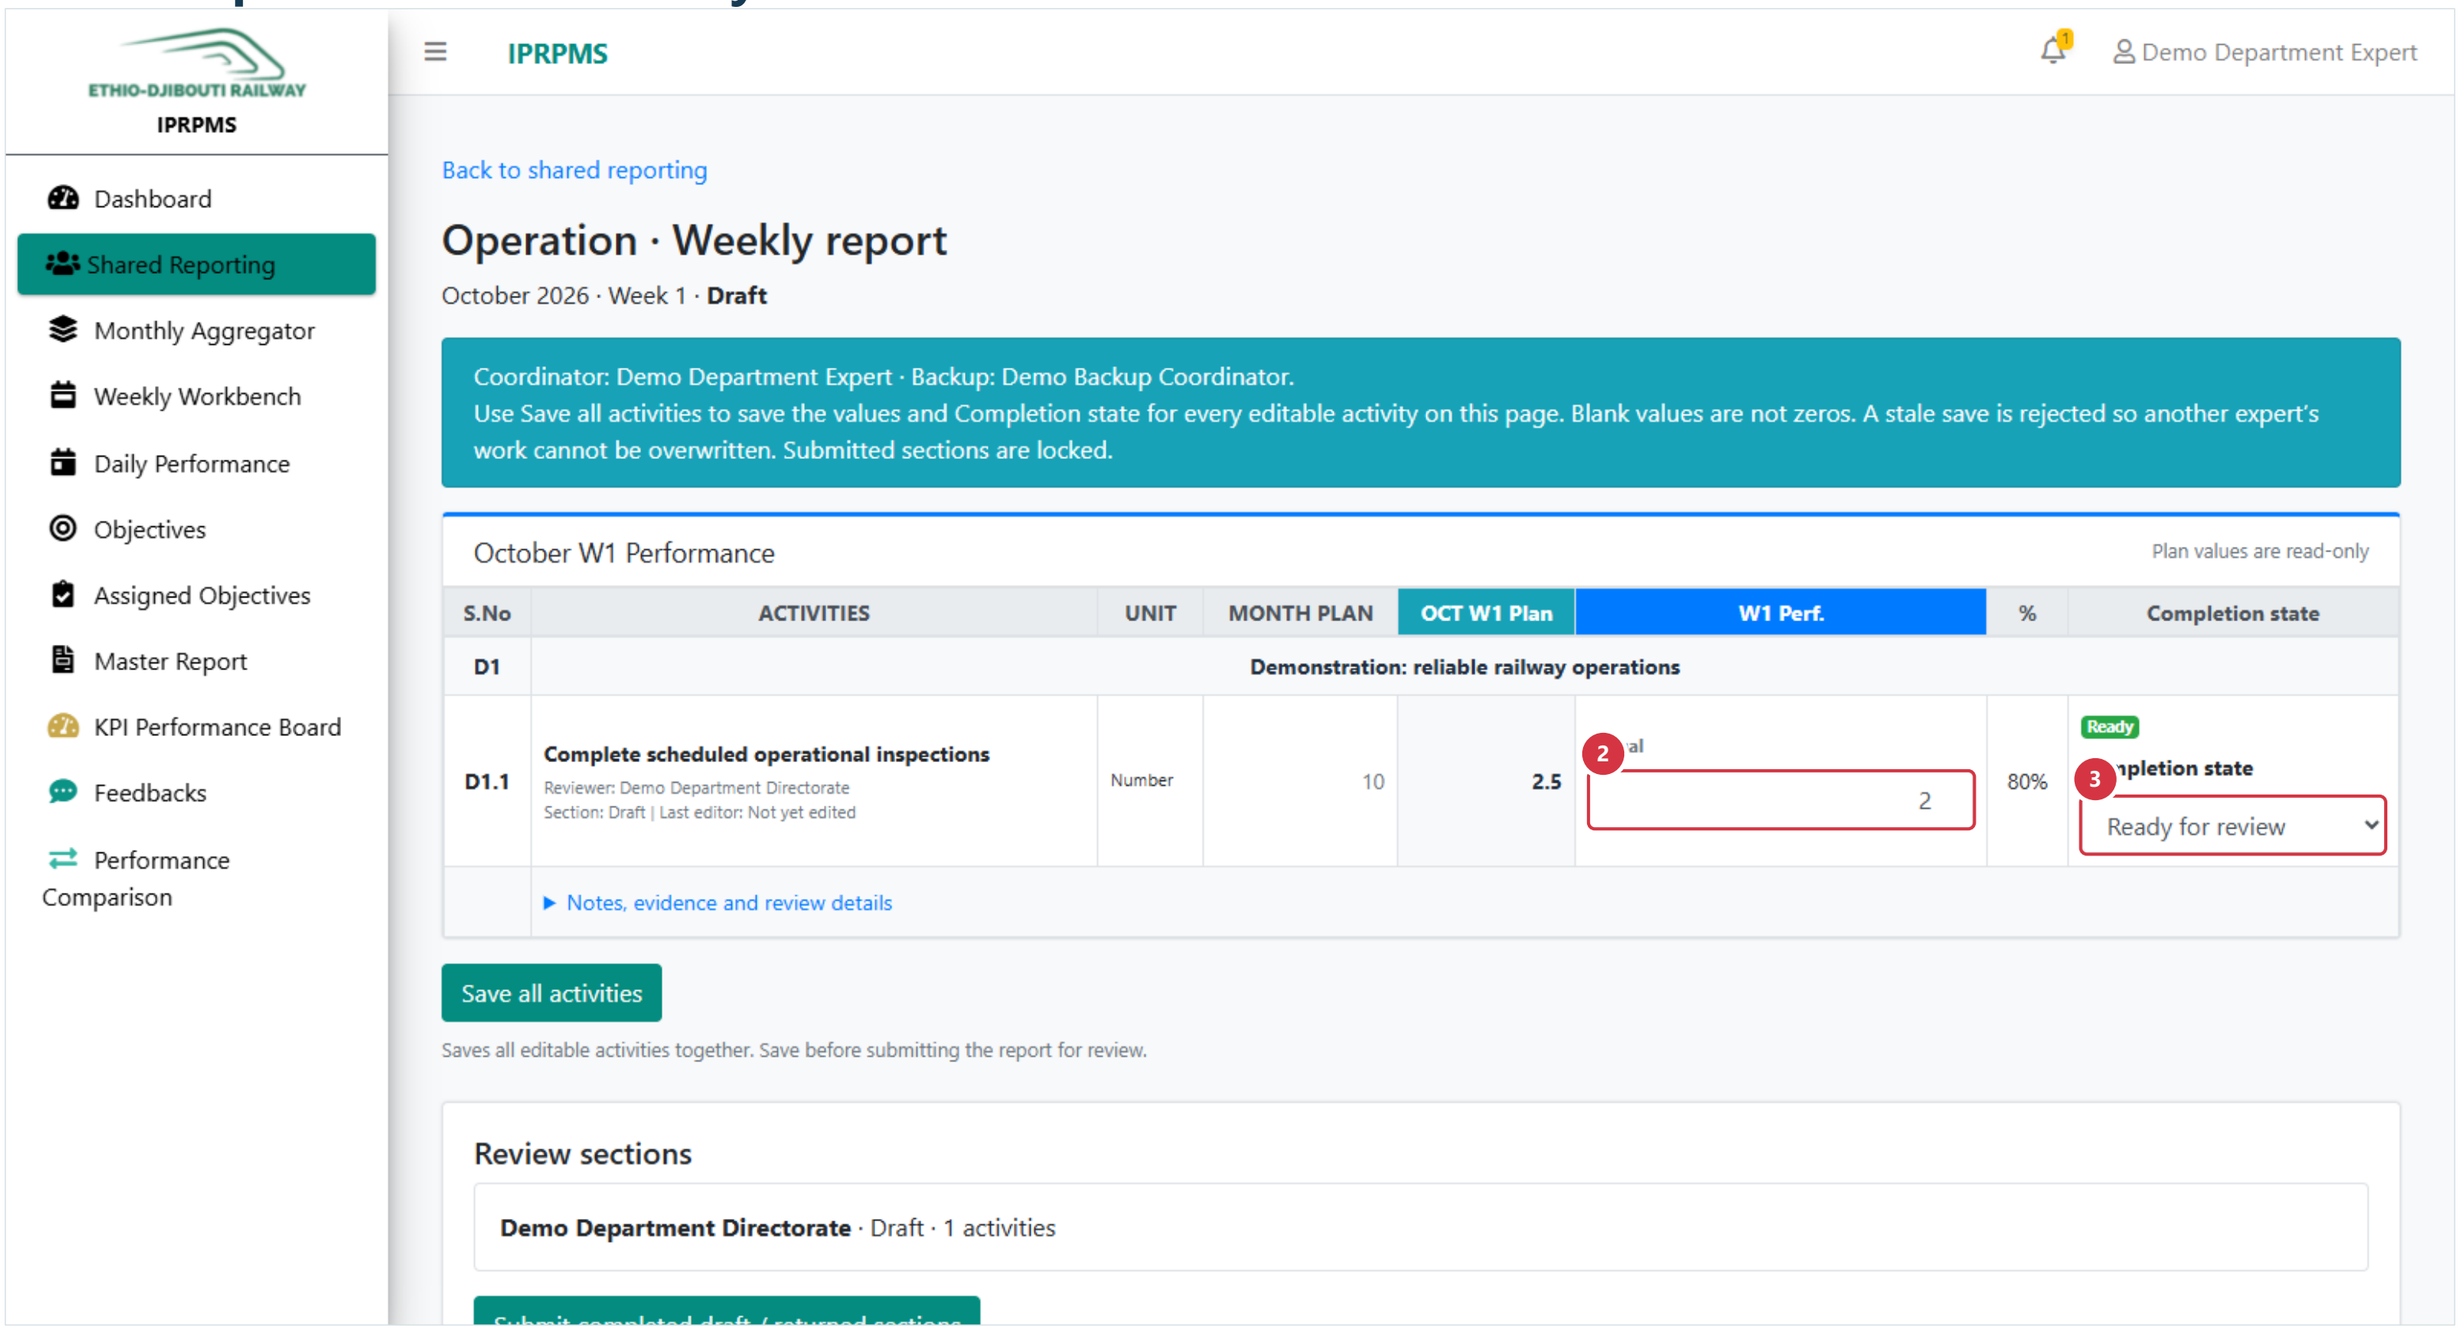

Shared Reporting: select year, month and frequency

1. Select Plan year and Month.
2. Choose Daily, Weekly or Monthly in Reporting frequency.
3. Choose a Week for daily/weekly reporting, then click Open shared report.

After this step: The report opens only for approved assigned activities planned for that period and frequency.

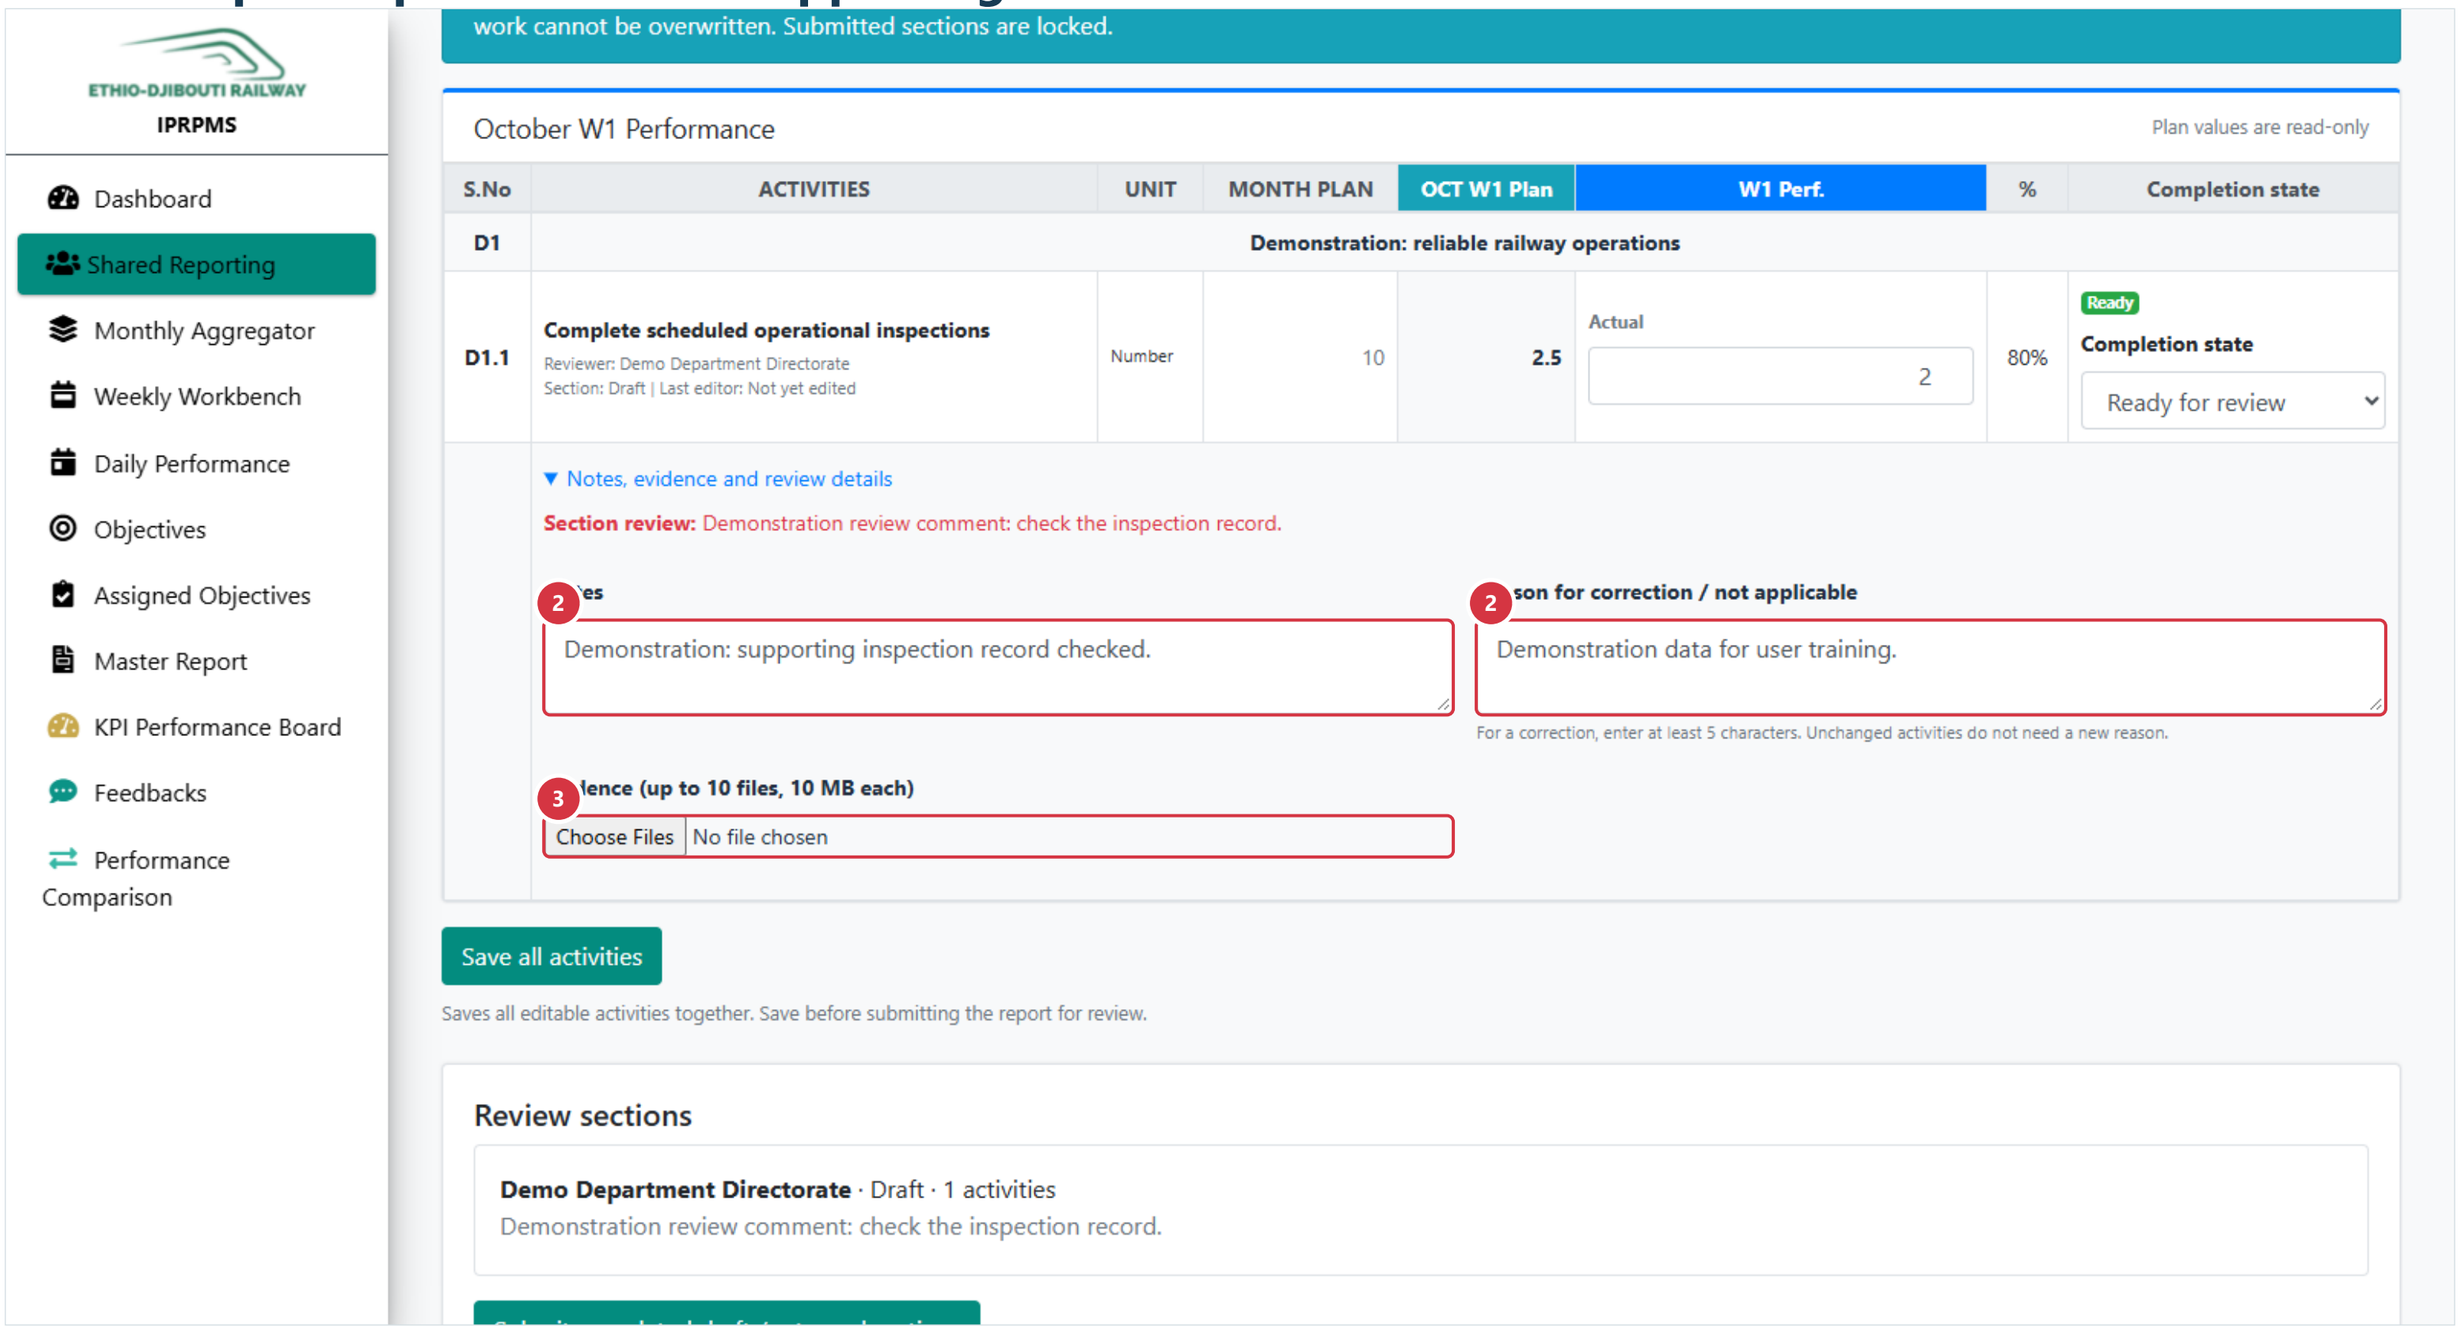

Shared report: enter the weekly actual

1. Check the report heading and activity code.
2. Enter Actual using the unit shown.
3. Choose Ready for review when the row is complete.

After this step: A blank actual is missing information. Enter zero only when the measured result is actually zero.

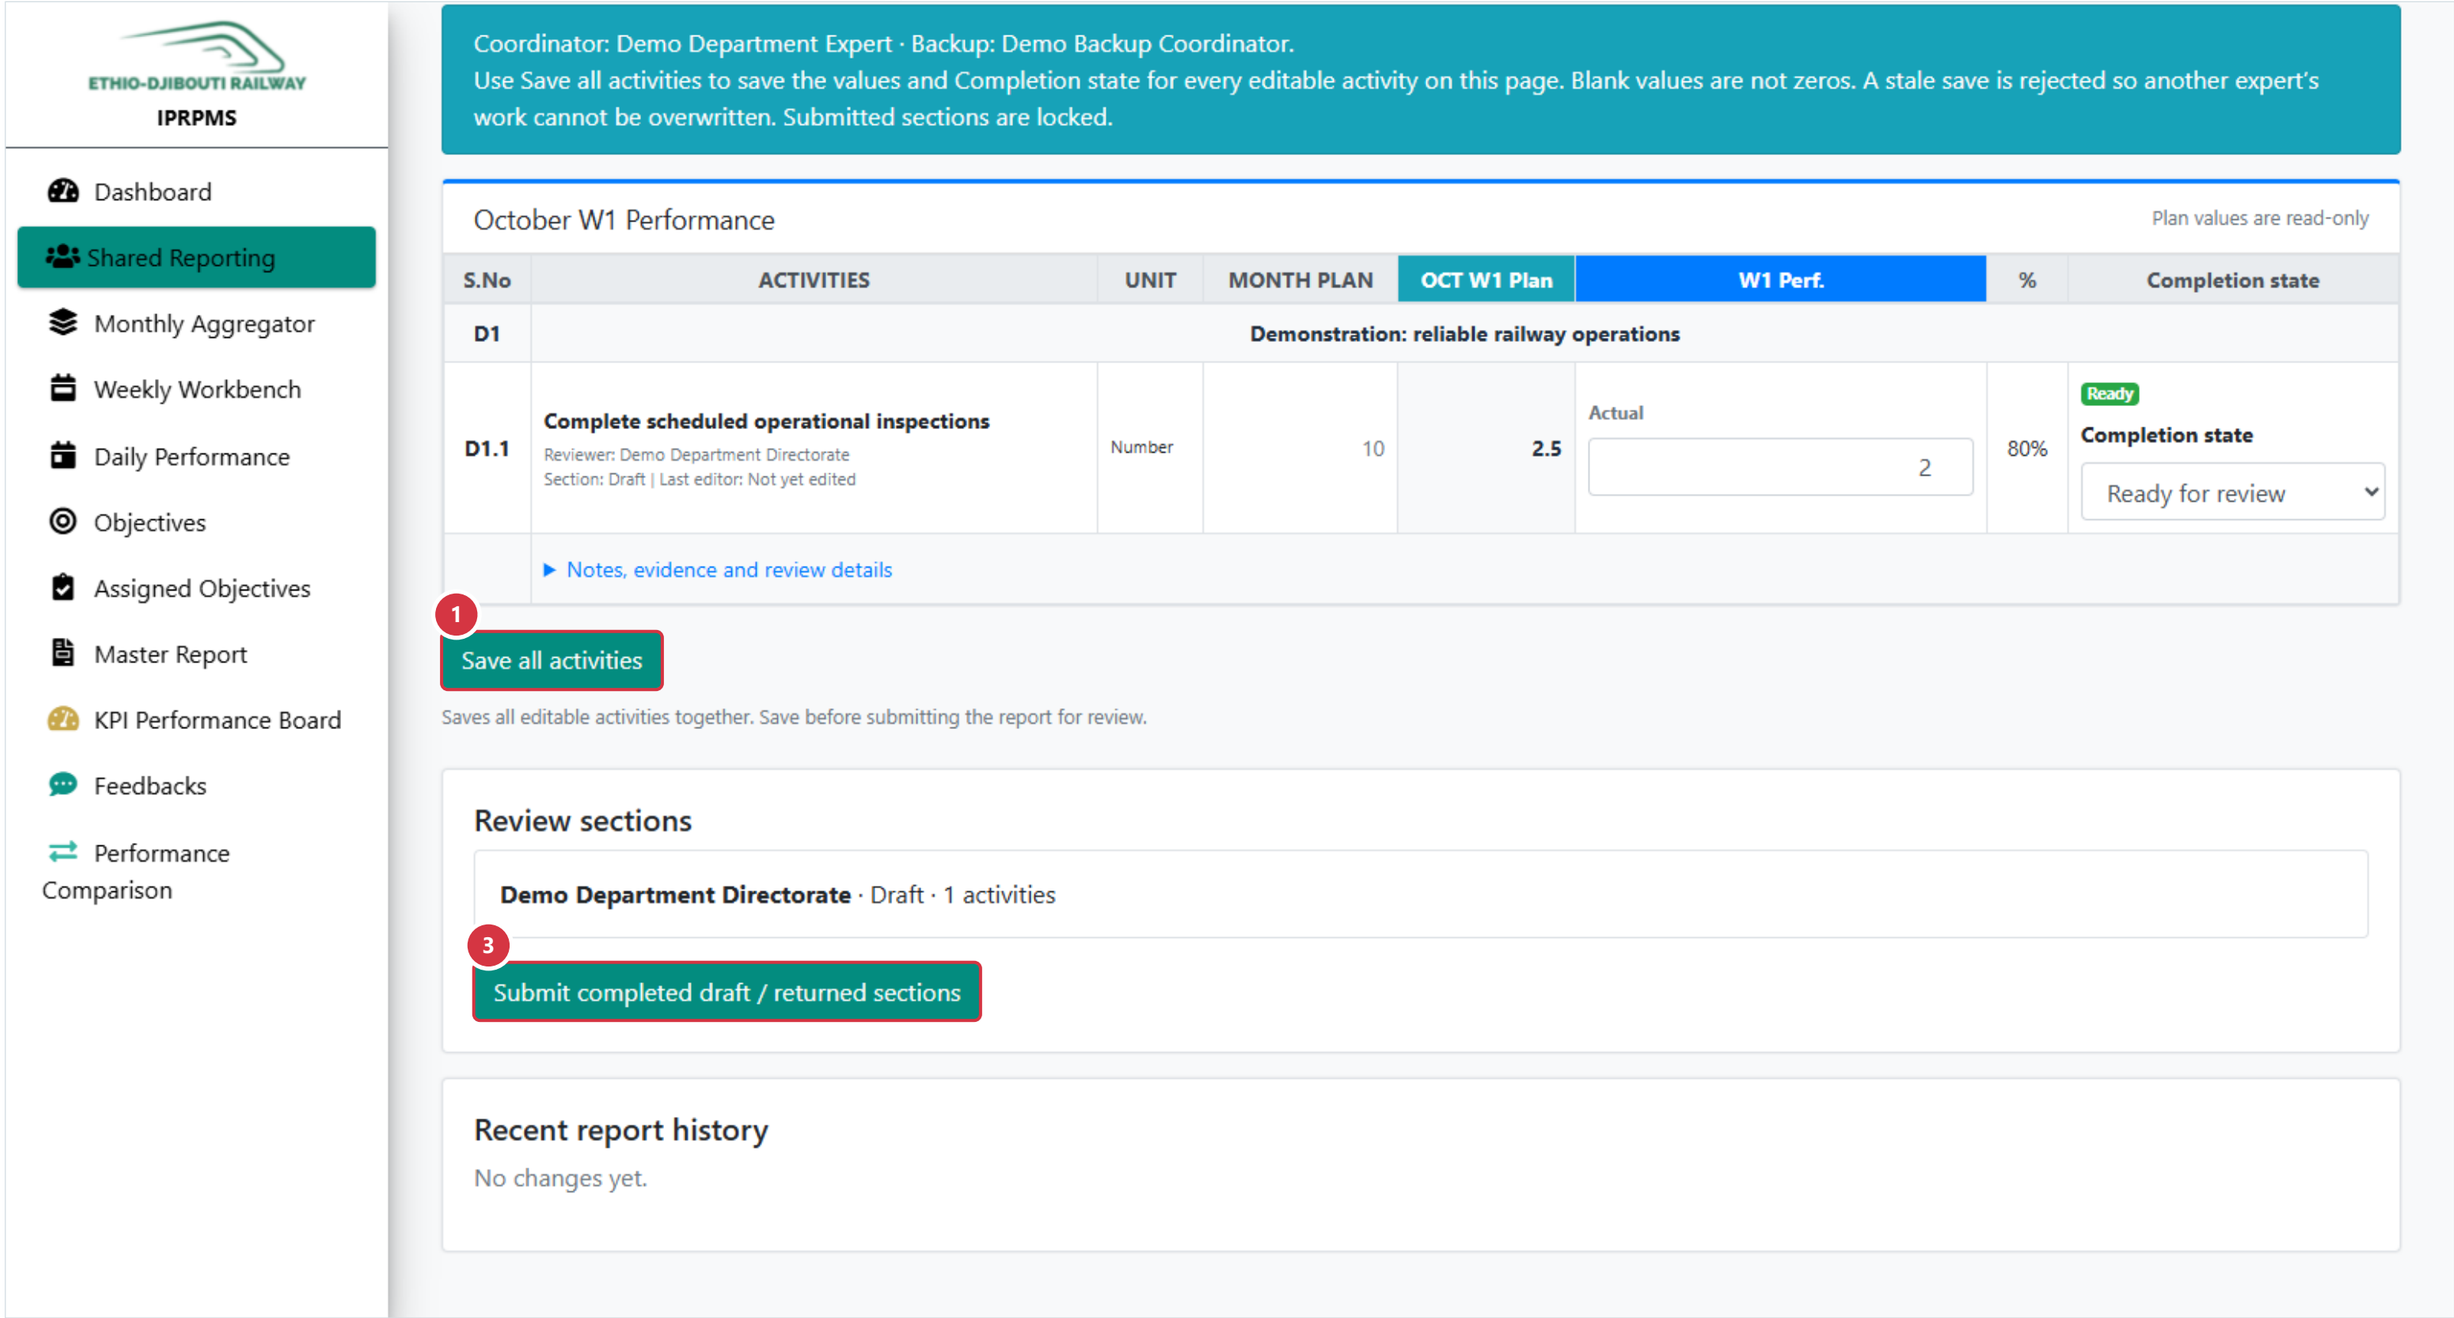

Shared report: open notes and supporting evidence

1. Click Notes, evidence and review details under the activity.
2. Enter Notes and a correction/Not applicable reason when required.
3. Choose Evidence files and save the activity changes.

After this step: Each evidence file may be at most 10 MB. The screen lists the supported formats and ten-file limit.

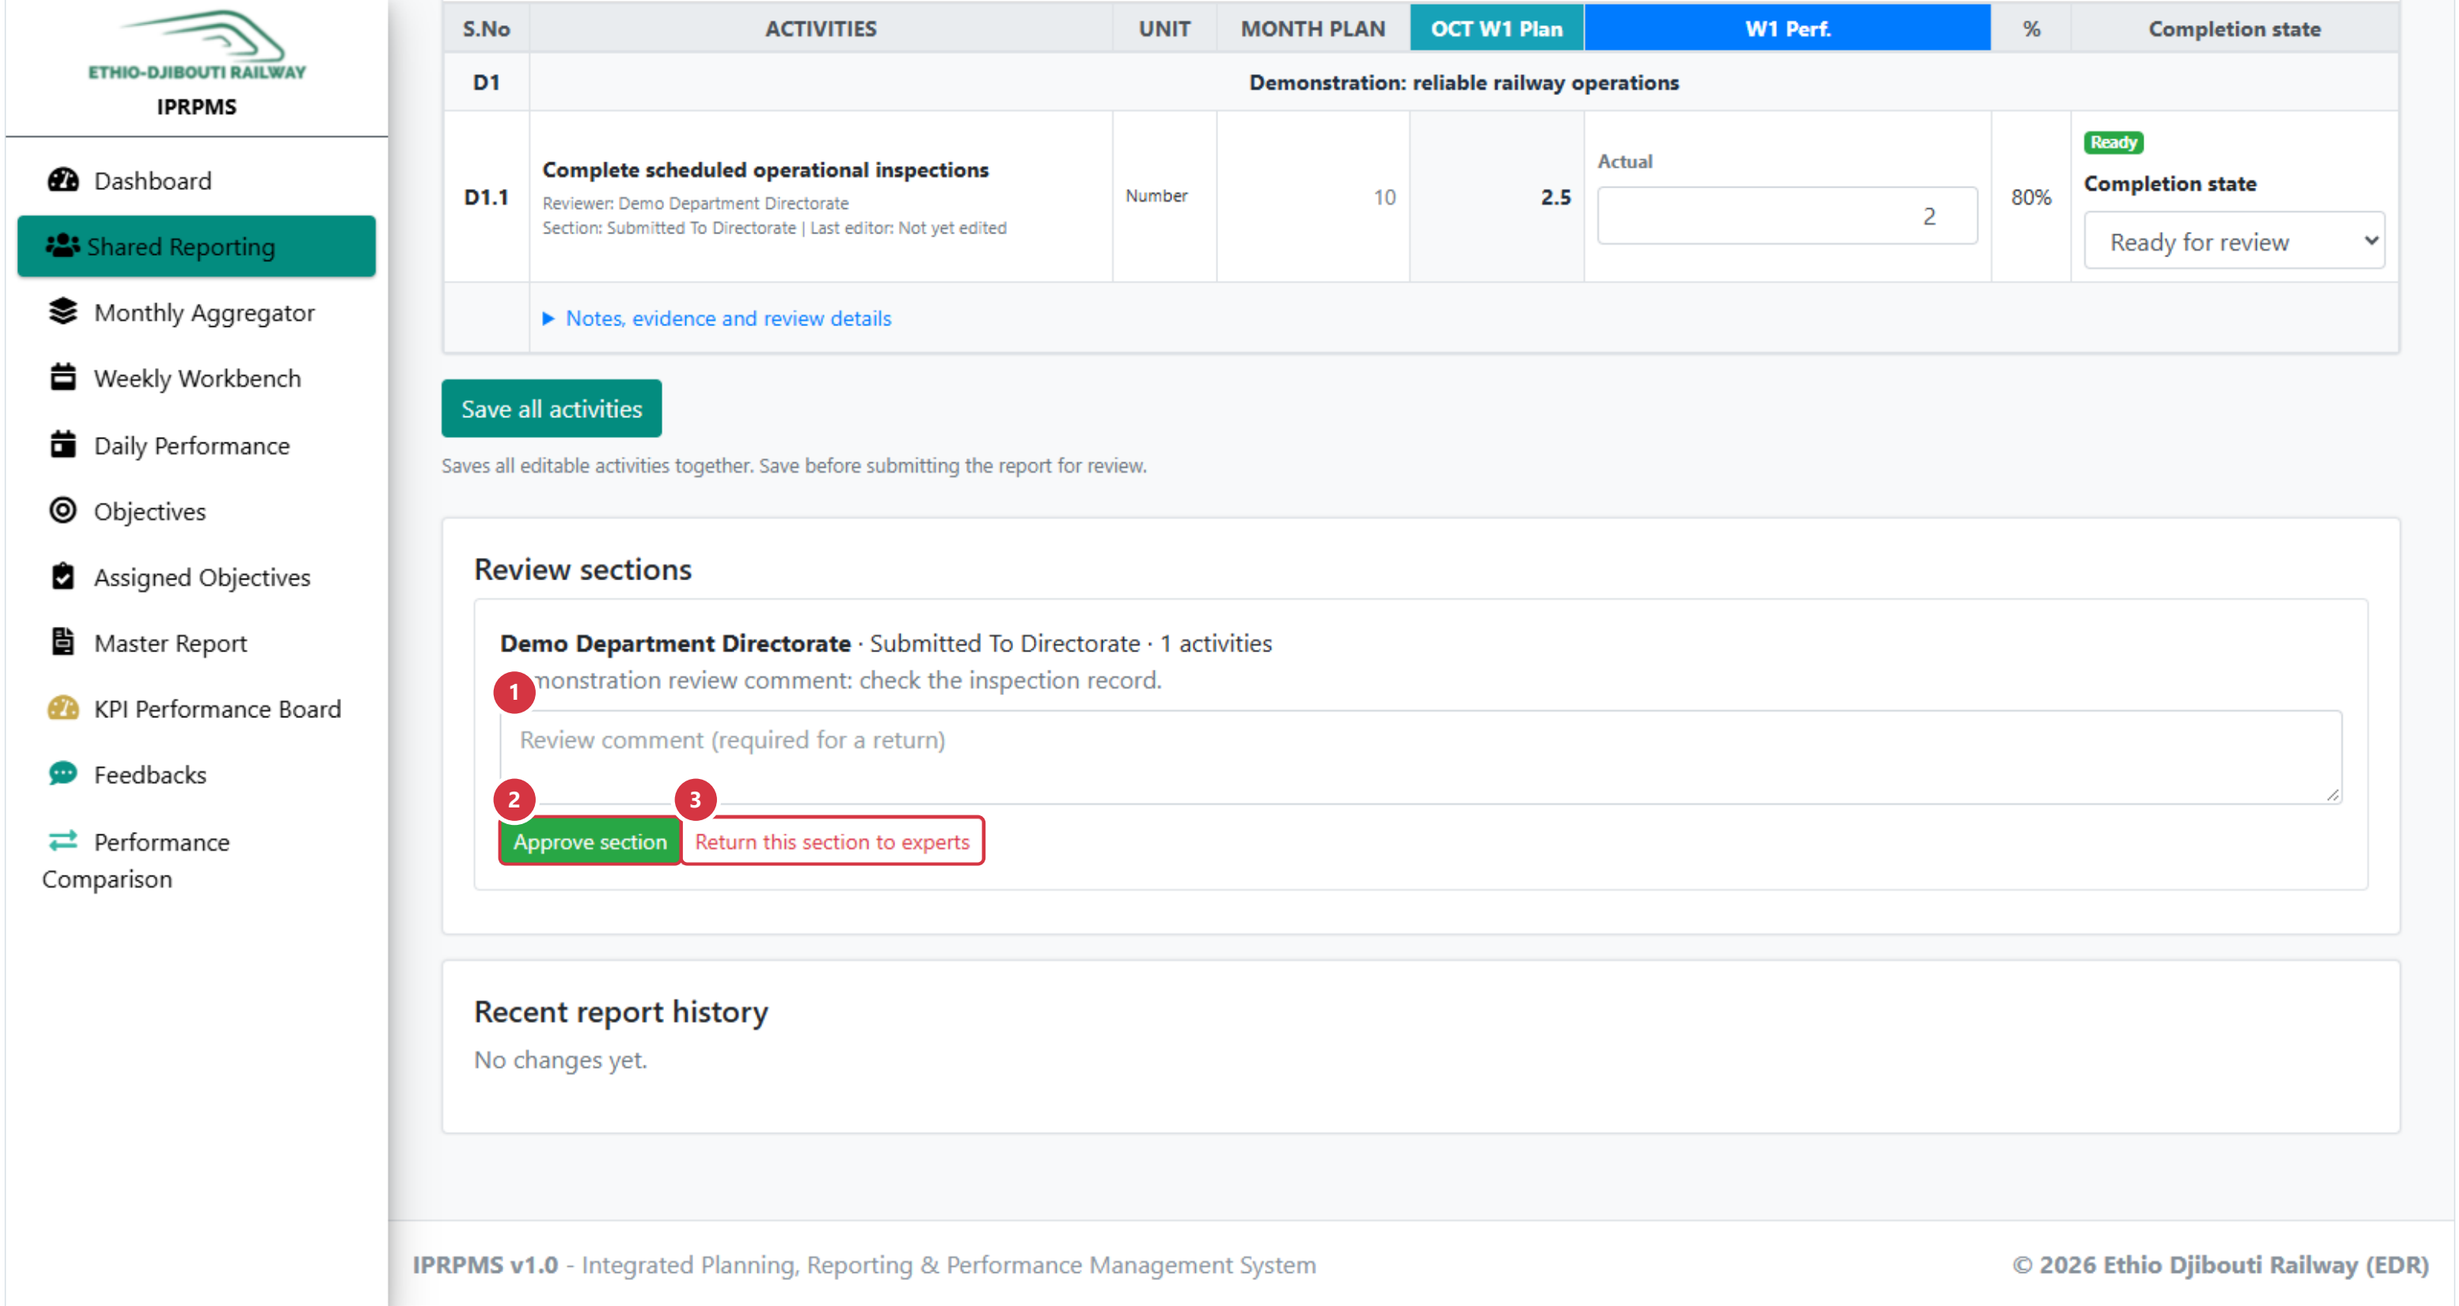

Shared report: save before submitting

1. Click Save all activities to persist the editable entries.
2. Check readiness and resolve any validation messages.
3. Click Submit completed draft / returned sections.

After this step: Only the coordinator or backup can submit. Every required row must be ready or have a valid Not applicable reason.

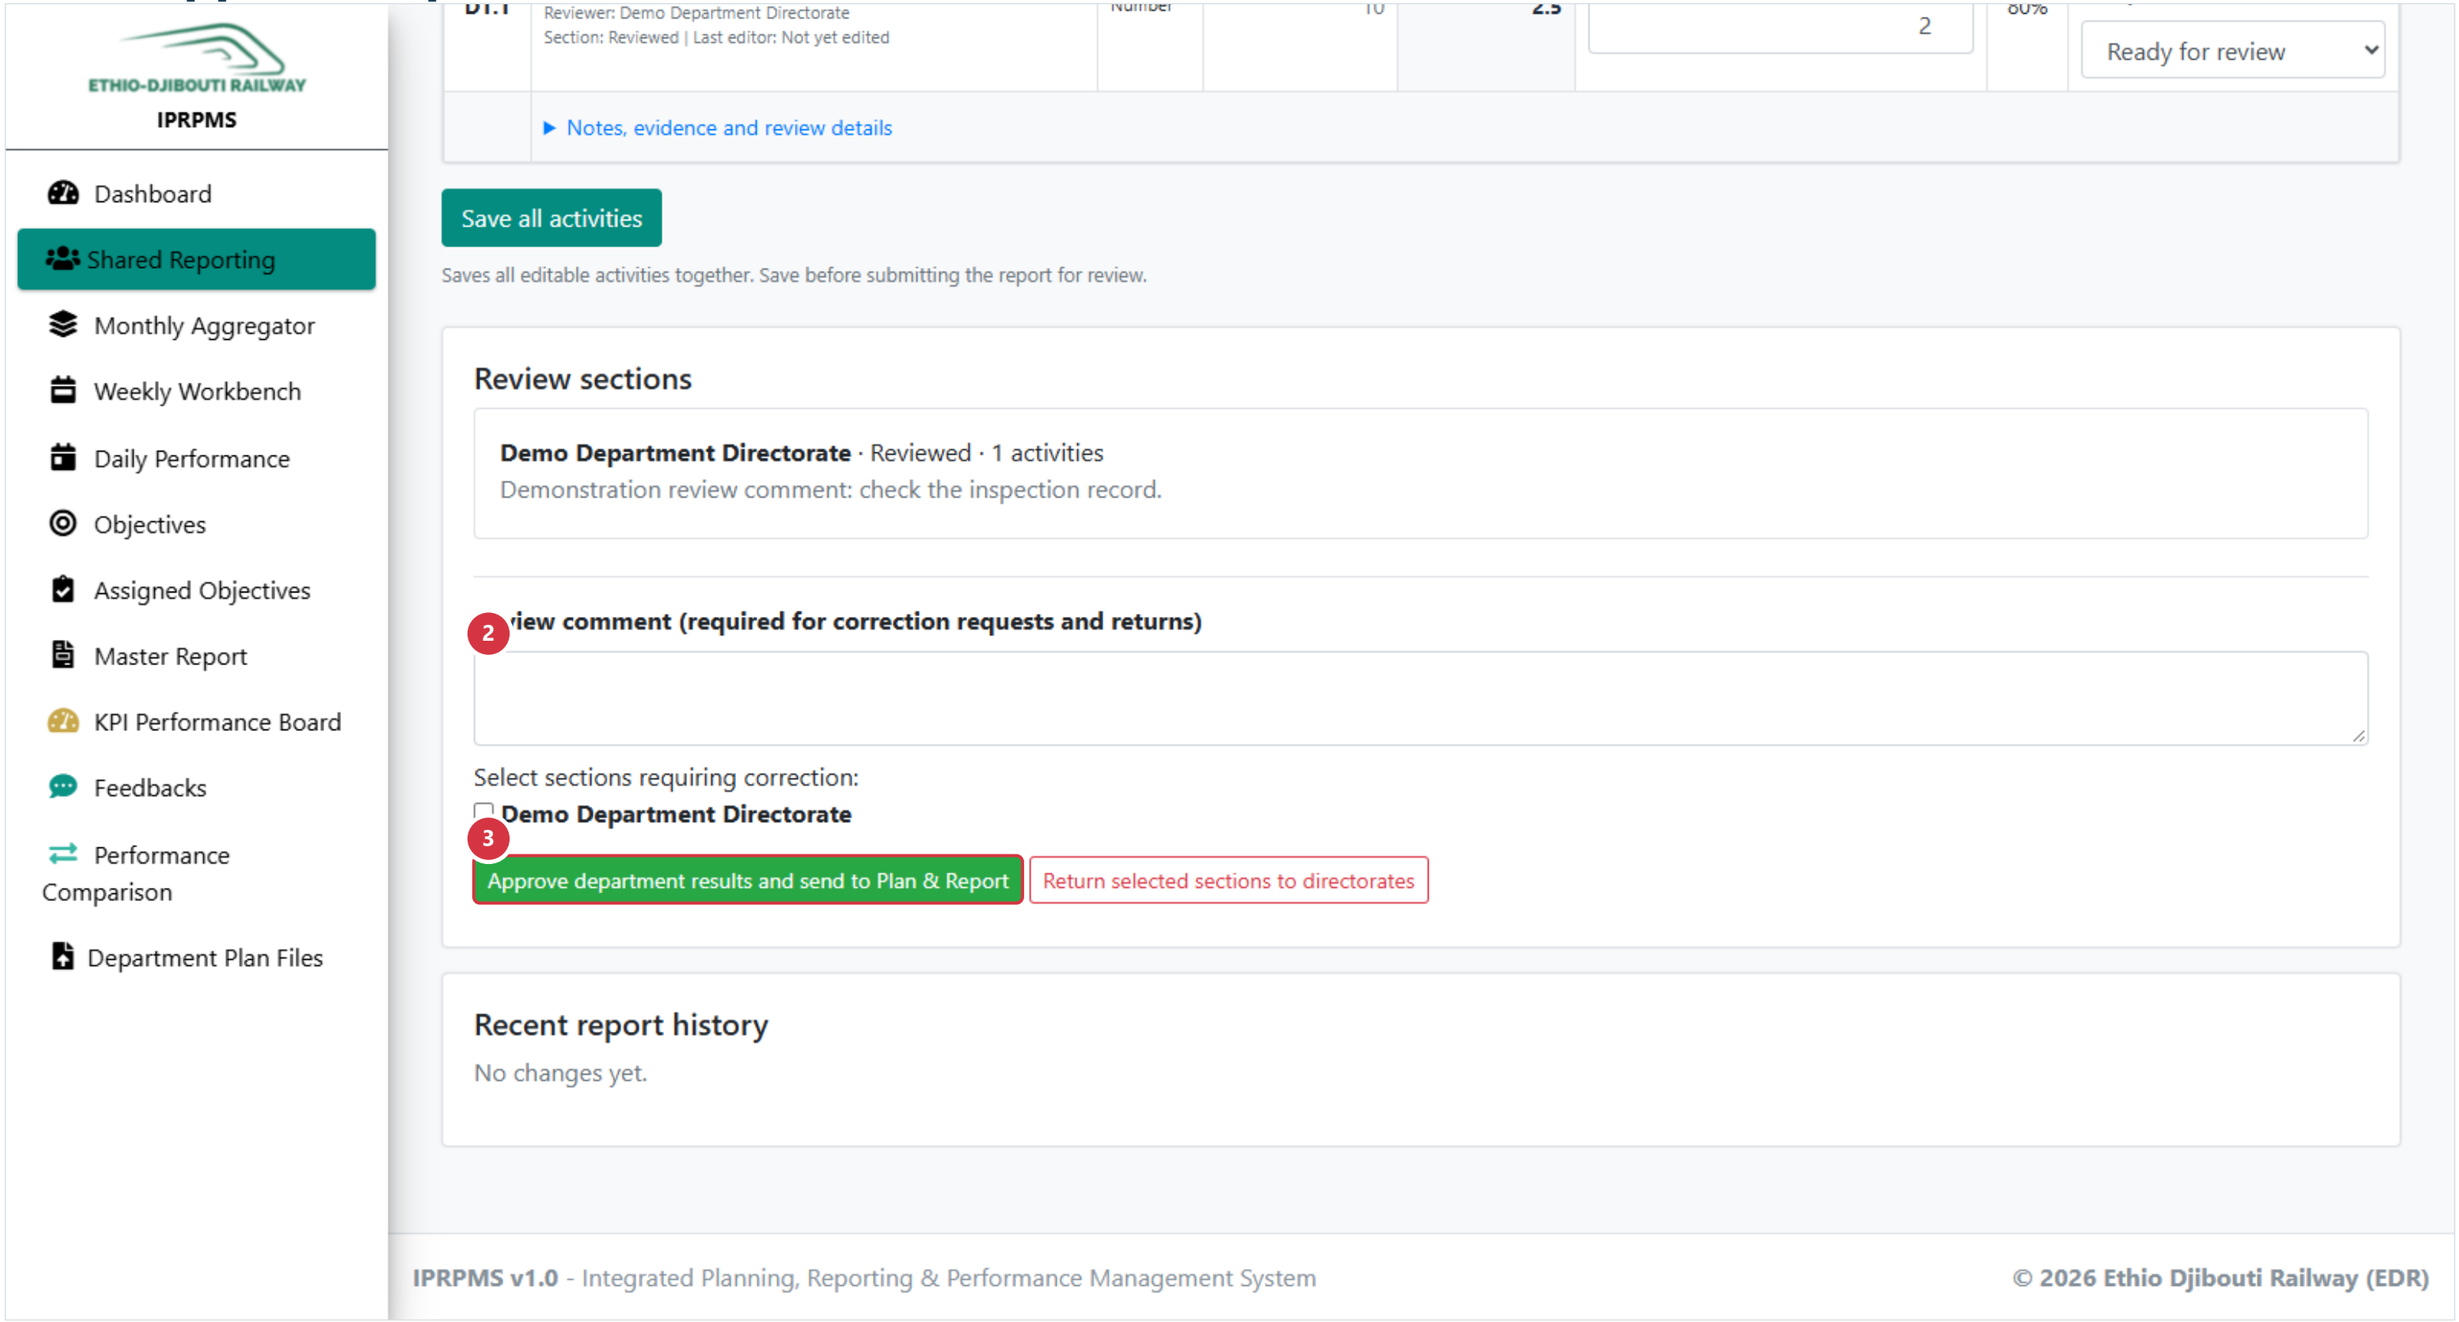

Directorate: review its reporting section

1. After checking values and evidence, enter the Section review note.
2. Click Approve section for a correct section.
3. To request a correction, enter a clear note and click Return this section to experts.

After this step: Approve section advances a clean section. Return this section to experts reopens that section for correction.

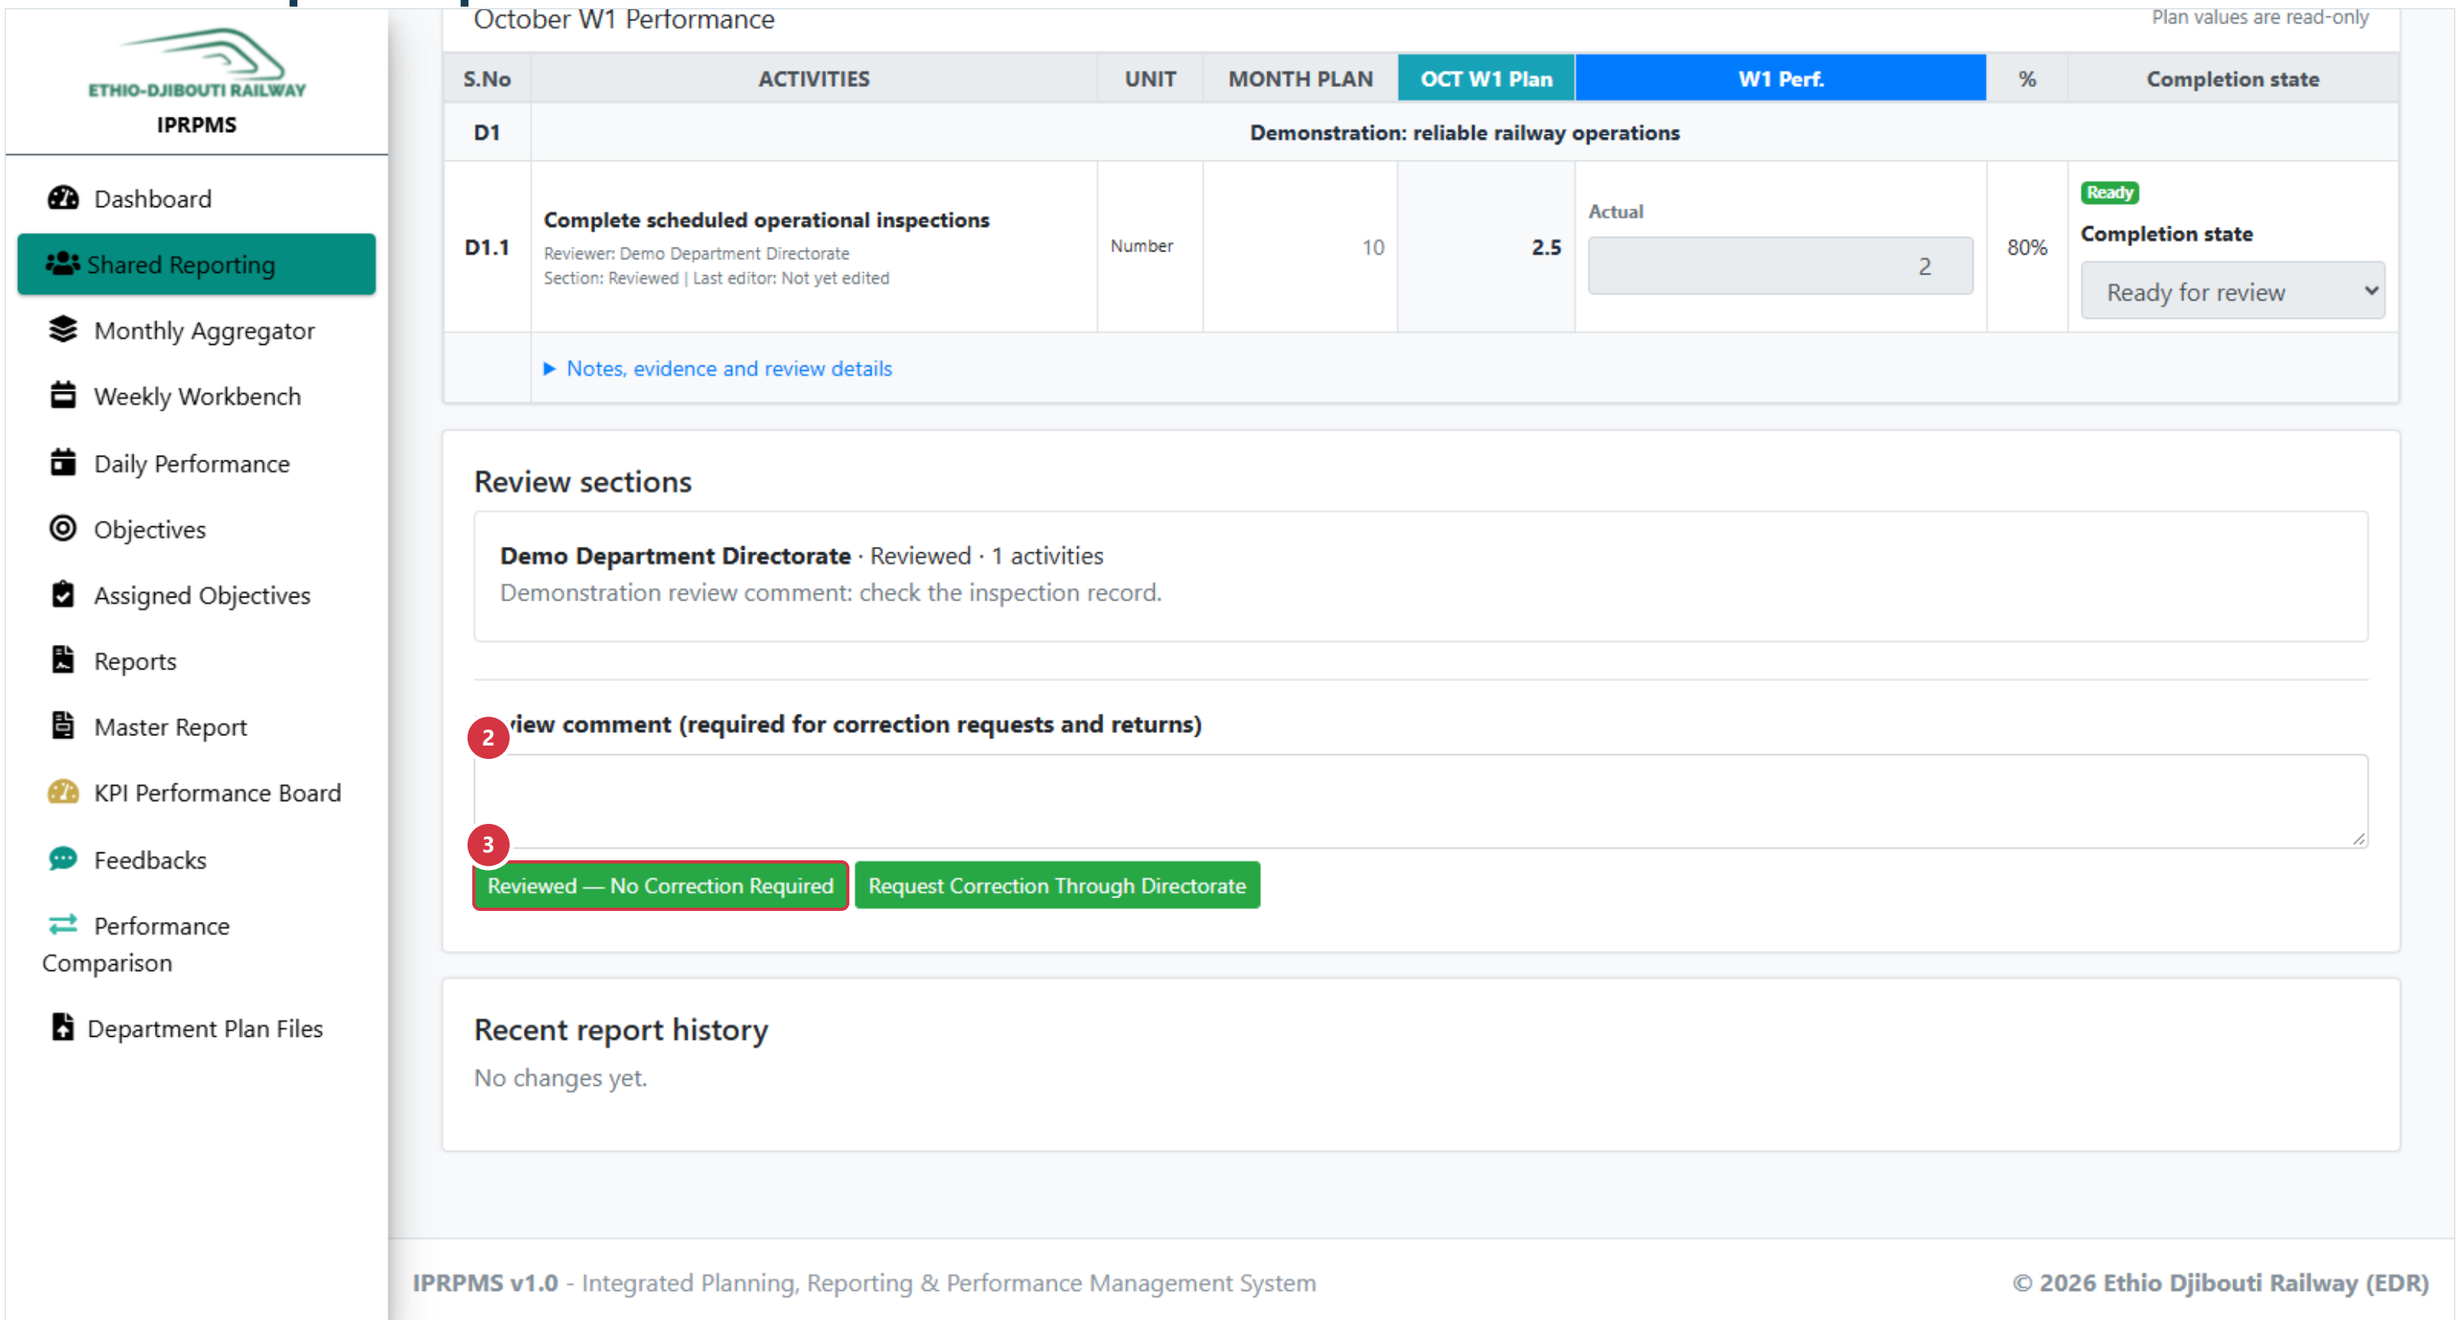

Chief: approve department results

1. Read the consolidated report and section decisions.
2. Enter a Review comment if needed.
3. Click Approve department results and send to Plan & Report.

After this step: The originating department stays visible in the report heading and subsequent notification.

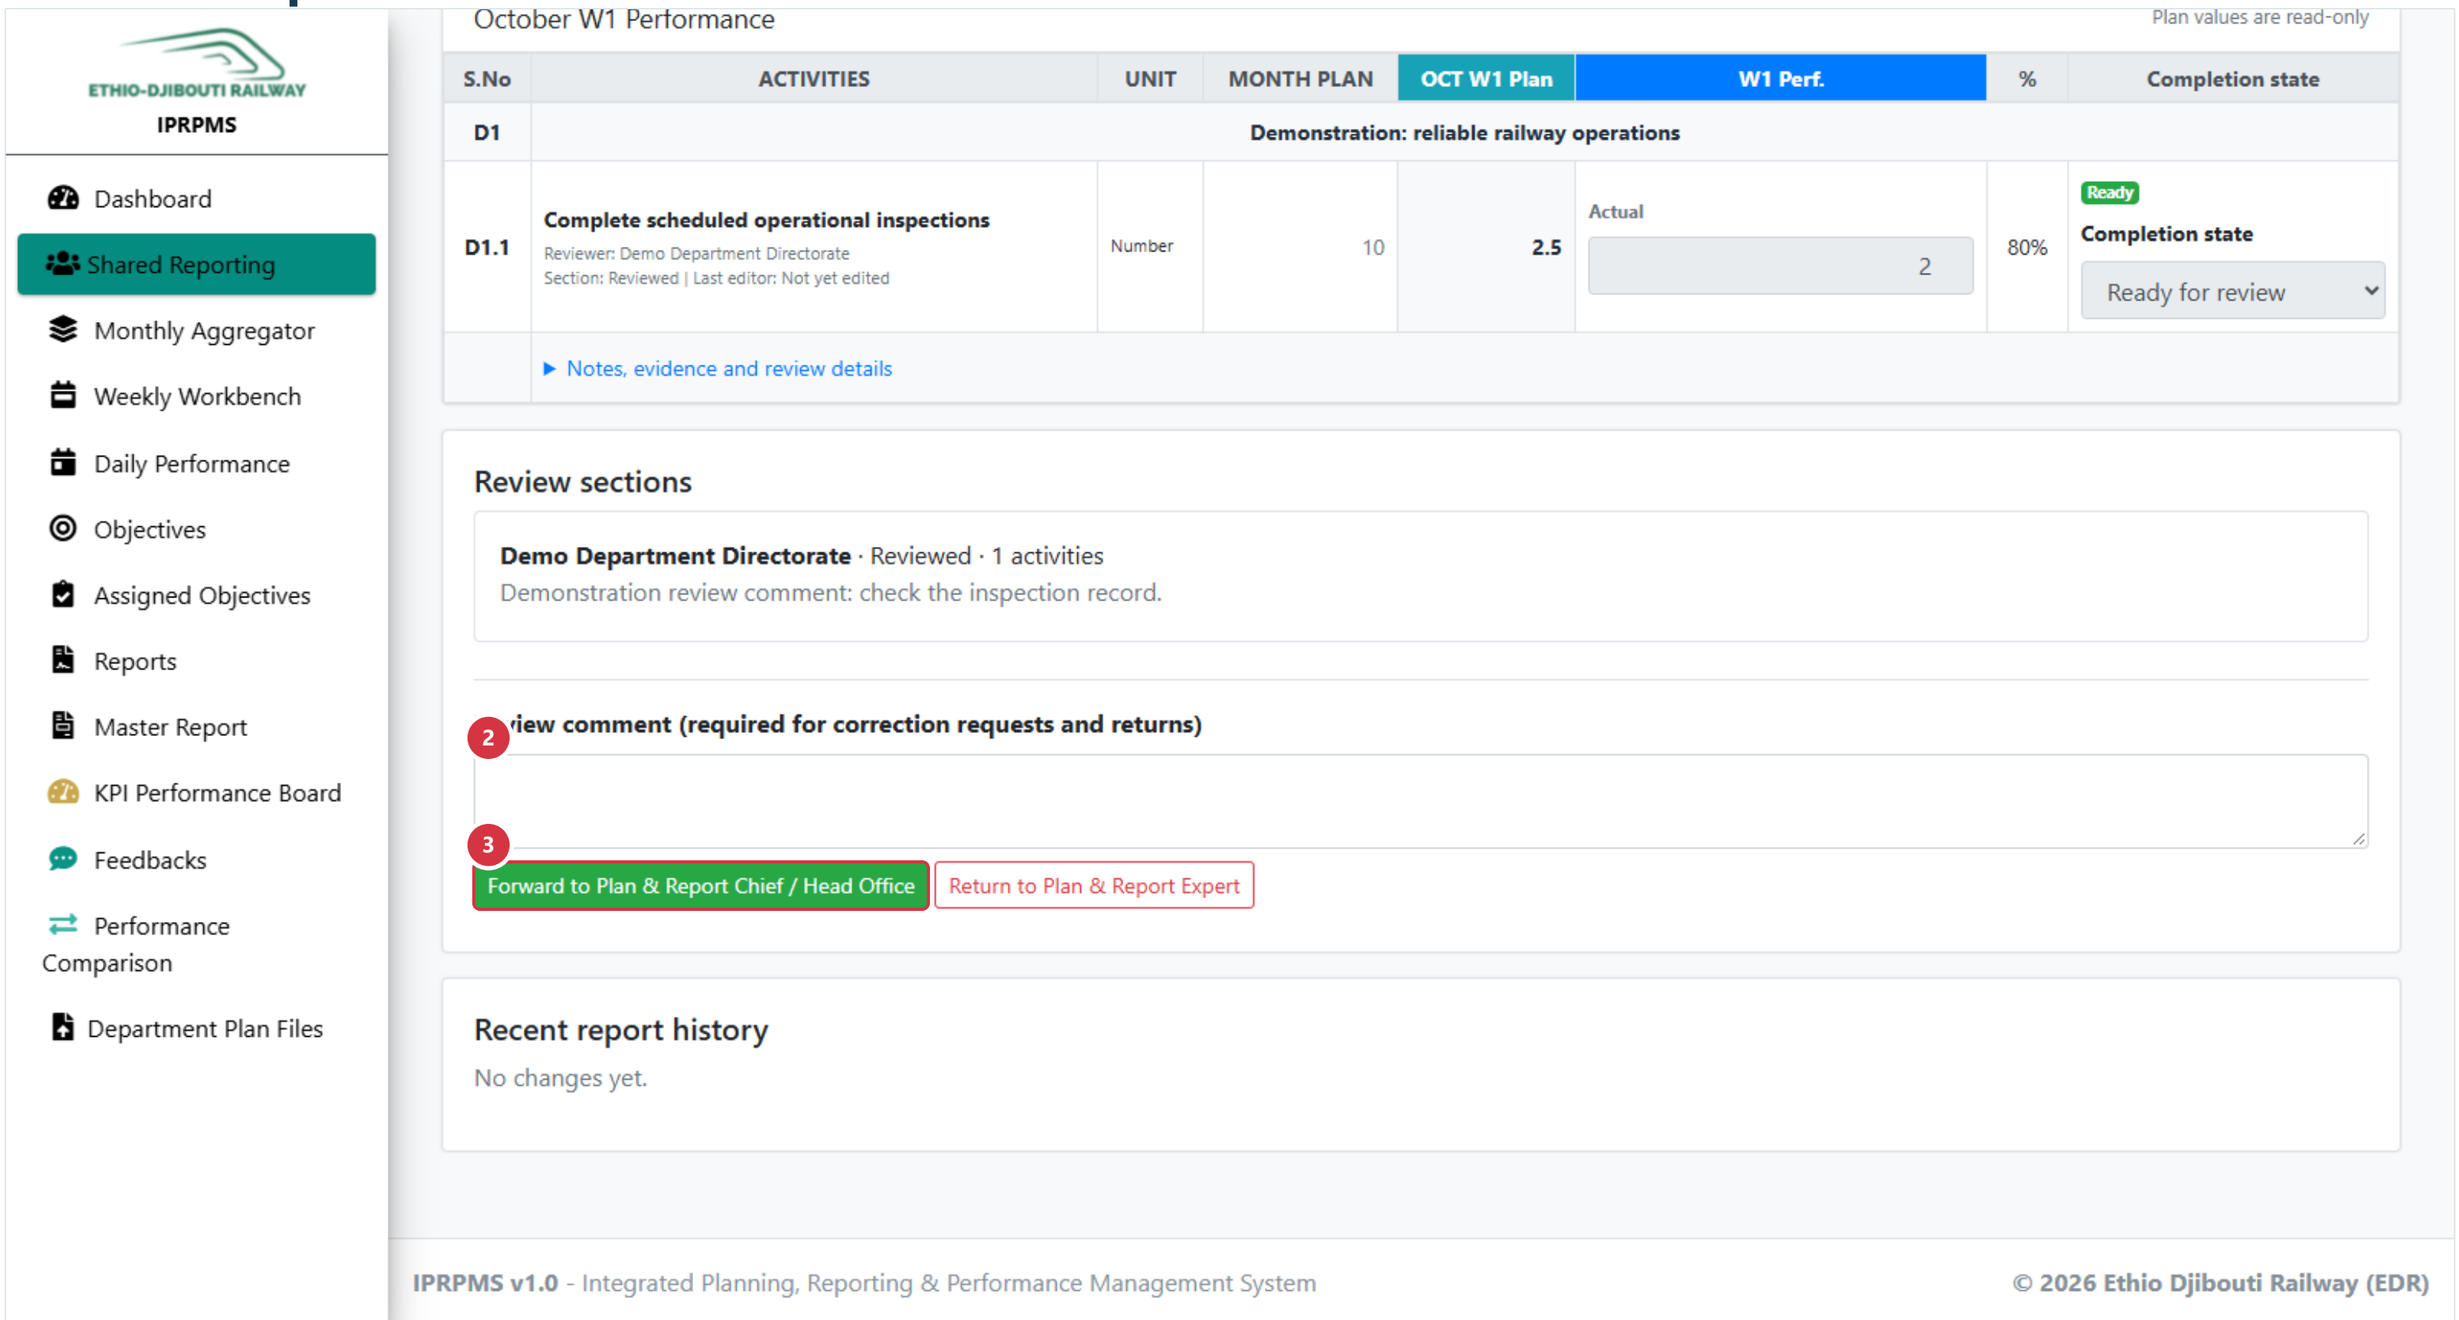

Plan and Report Expert: confirm review without correction

1. Check the department, period, evidence and approved departmental figures.
2. Add a Review comment as needed.
3. Click Reviewed - No Correction Required.

After this step: The report moves to Plan and Report Directorate for confirmation and forwarding.

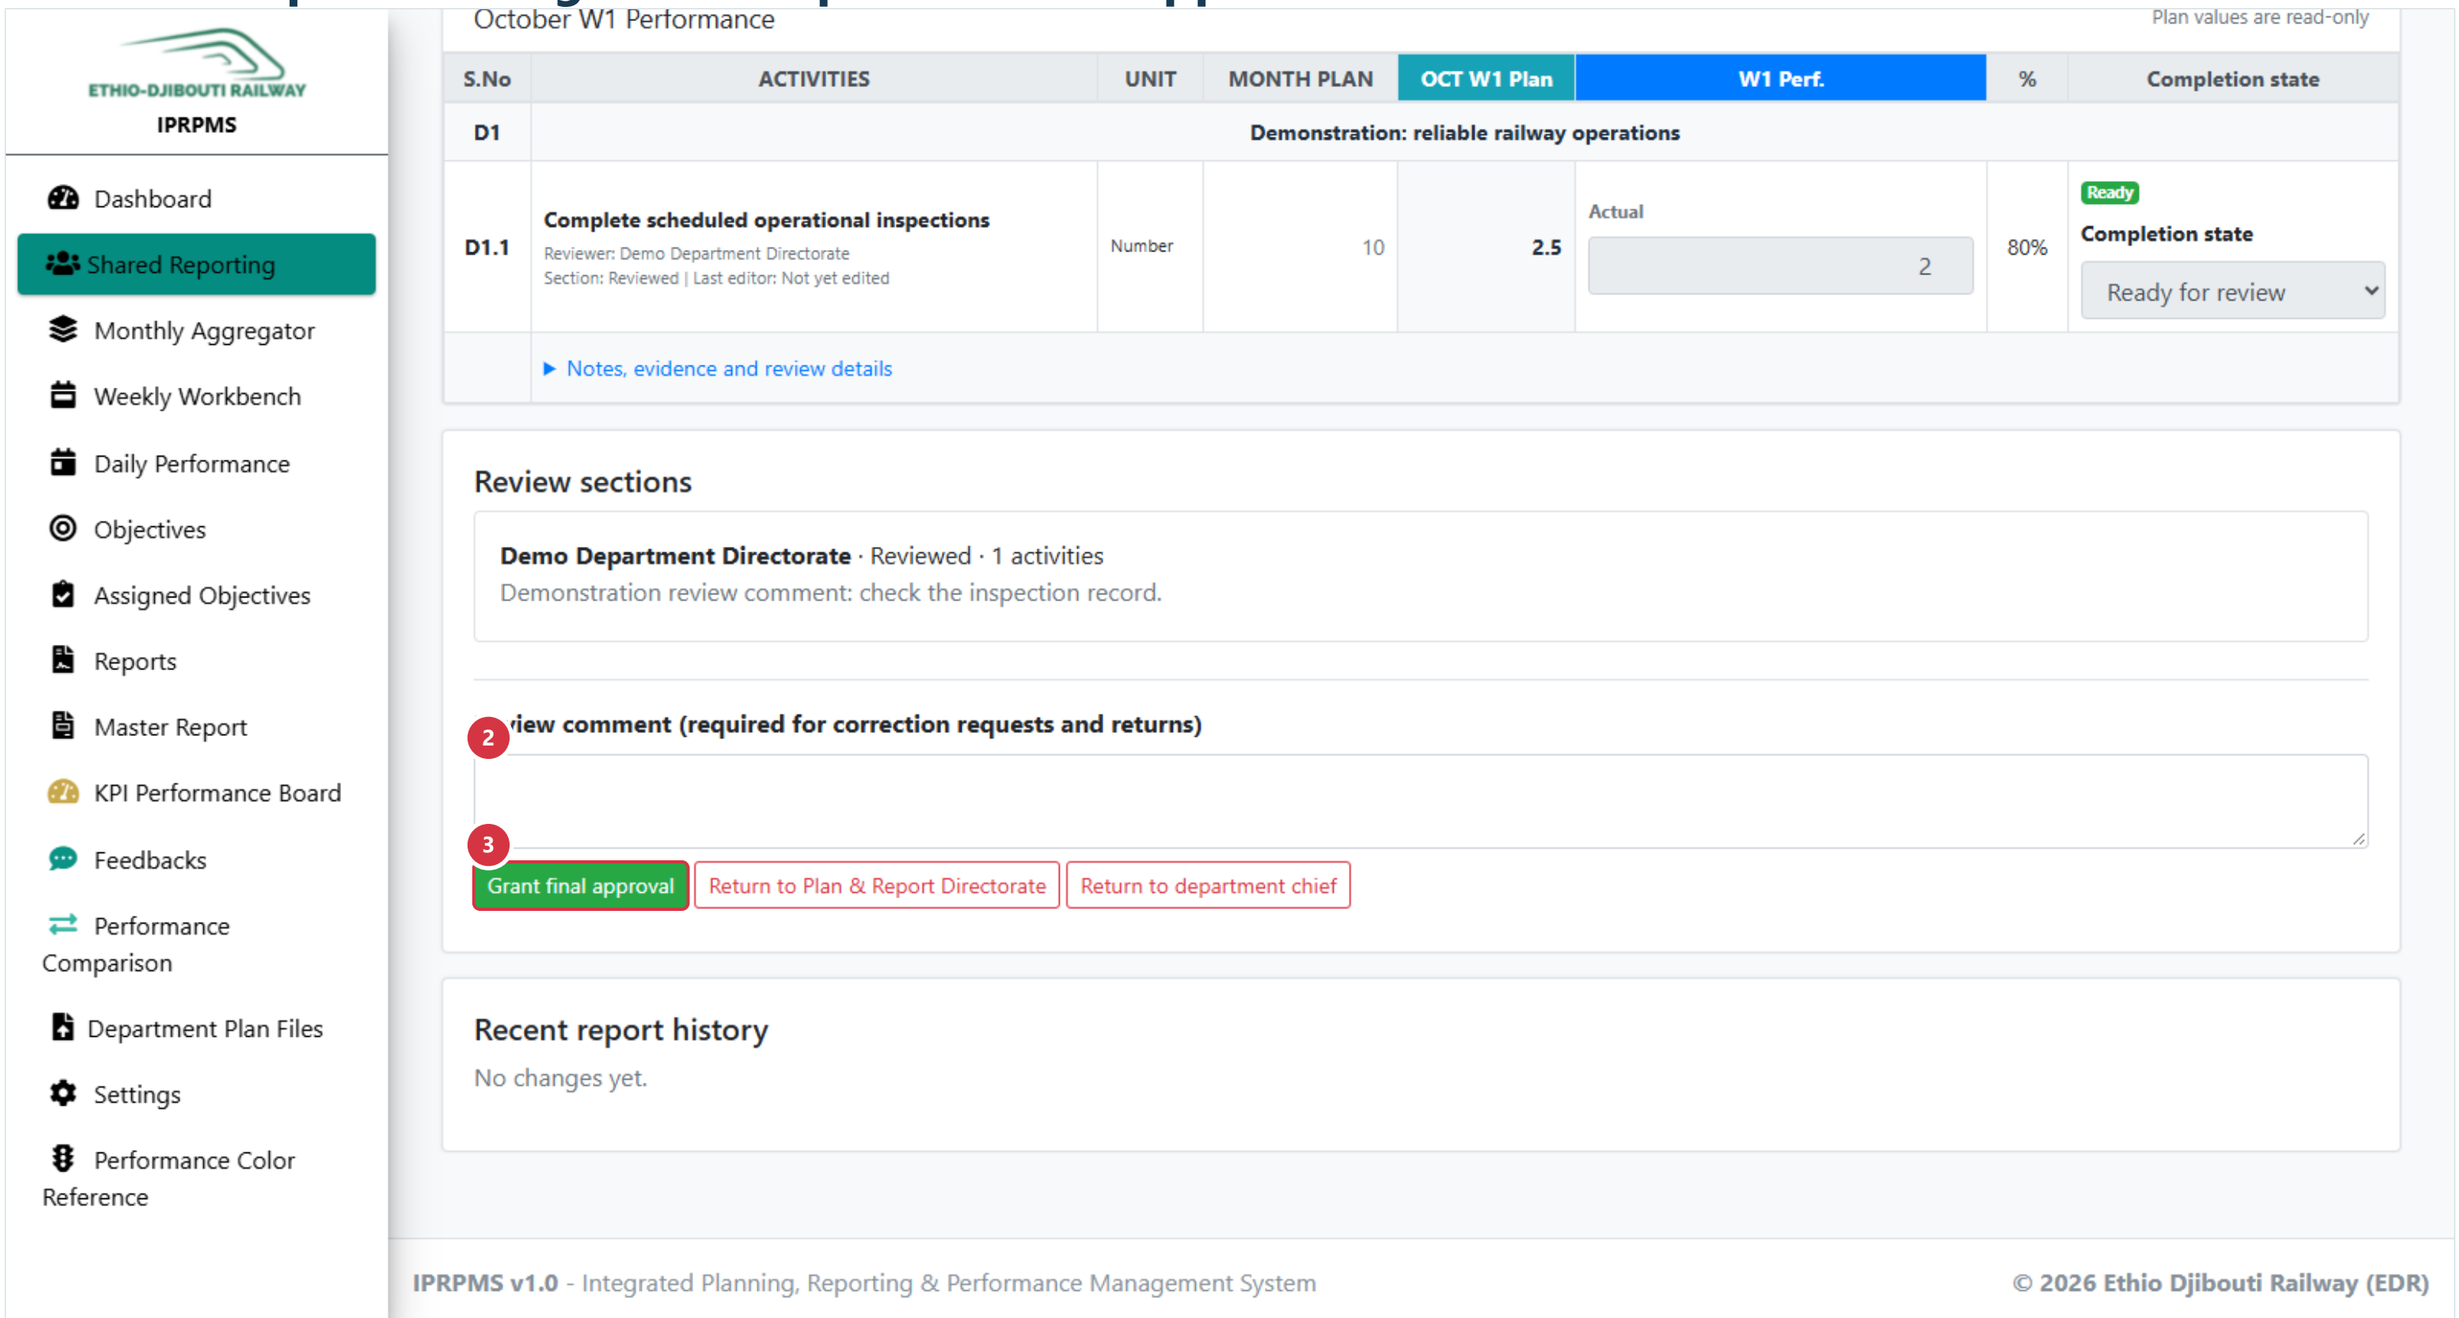

Plan and Report Directorate: forward for final decision

1. Review the department report and Expert comment.
2. Enter a Review comment where needed.
3. Click Forward to Plan & Report Chief / Head Office.

After this step: If the Expert needs to revise the review, use Return to Plan & Report Expert.

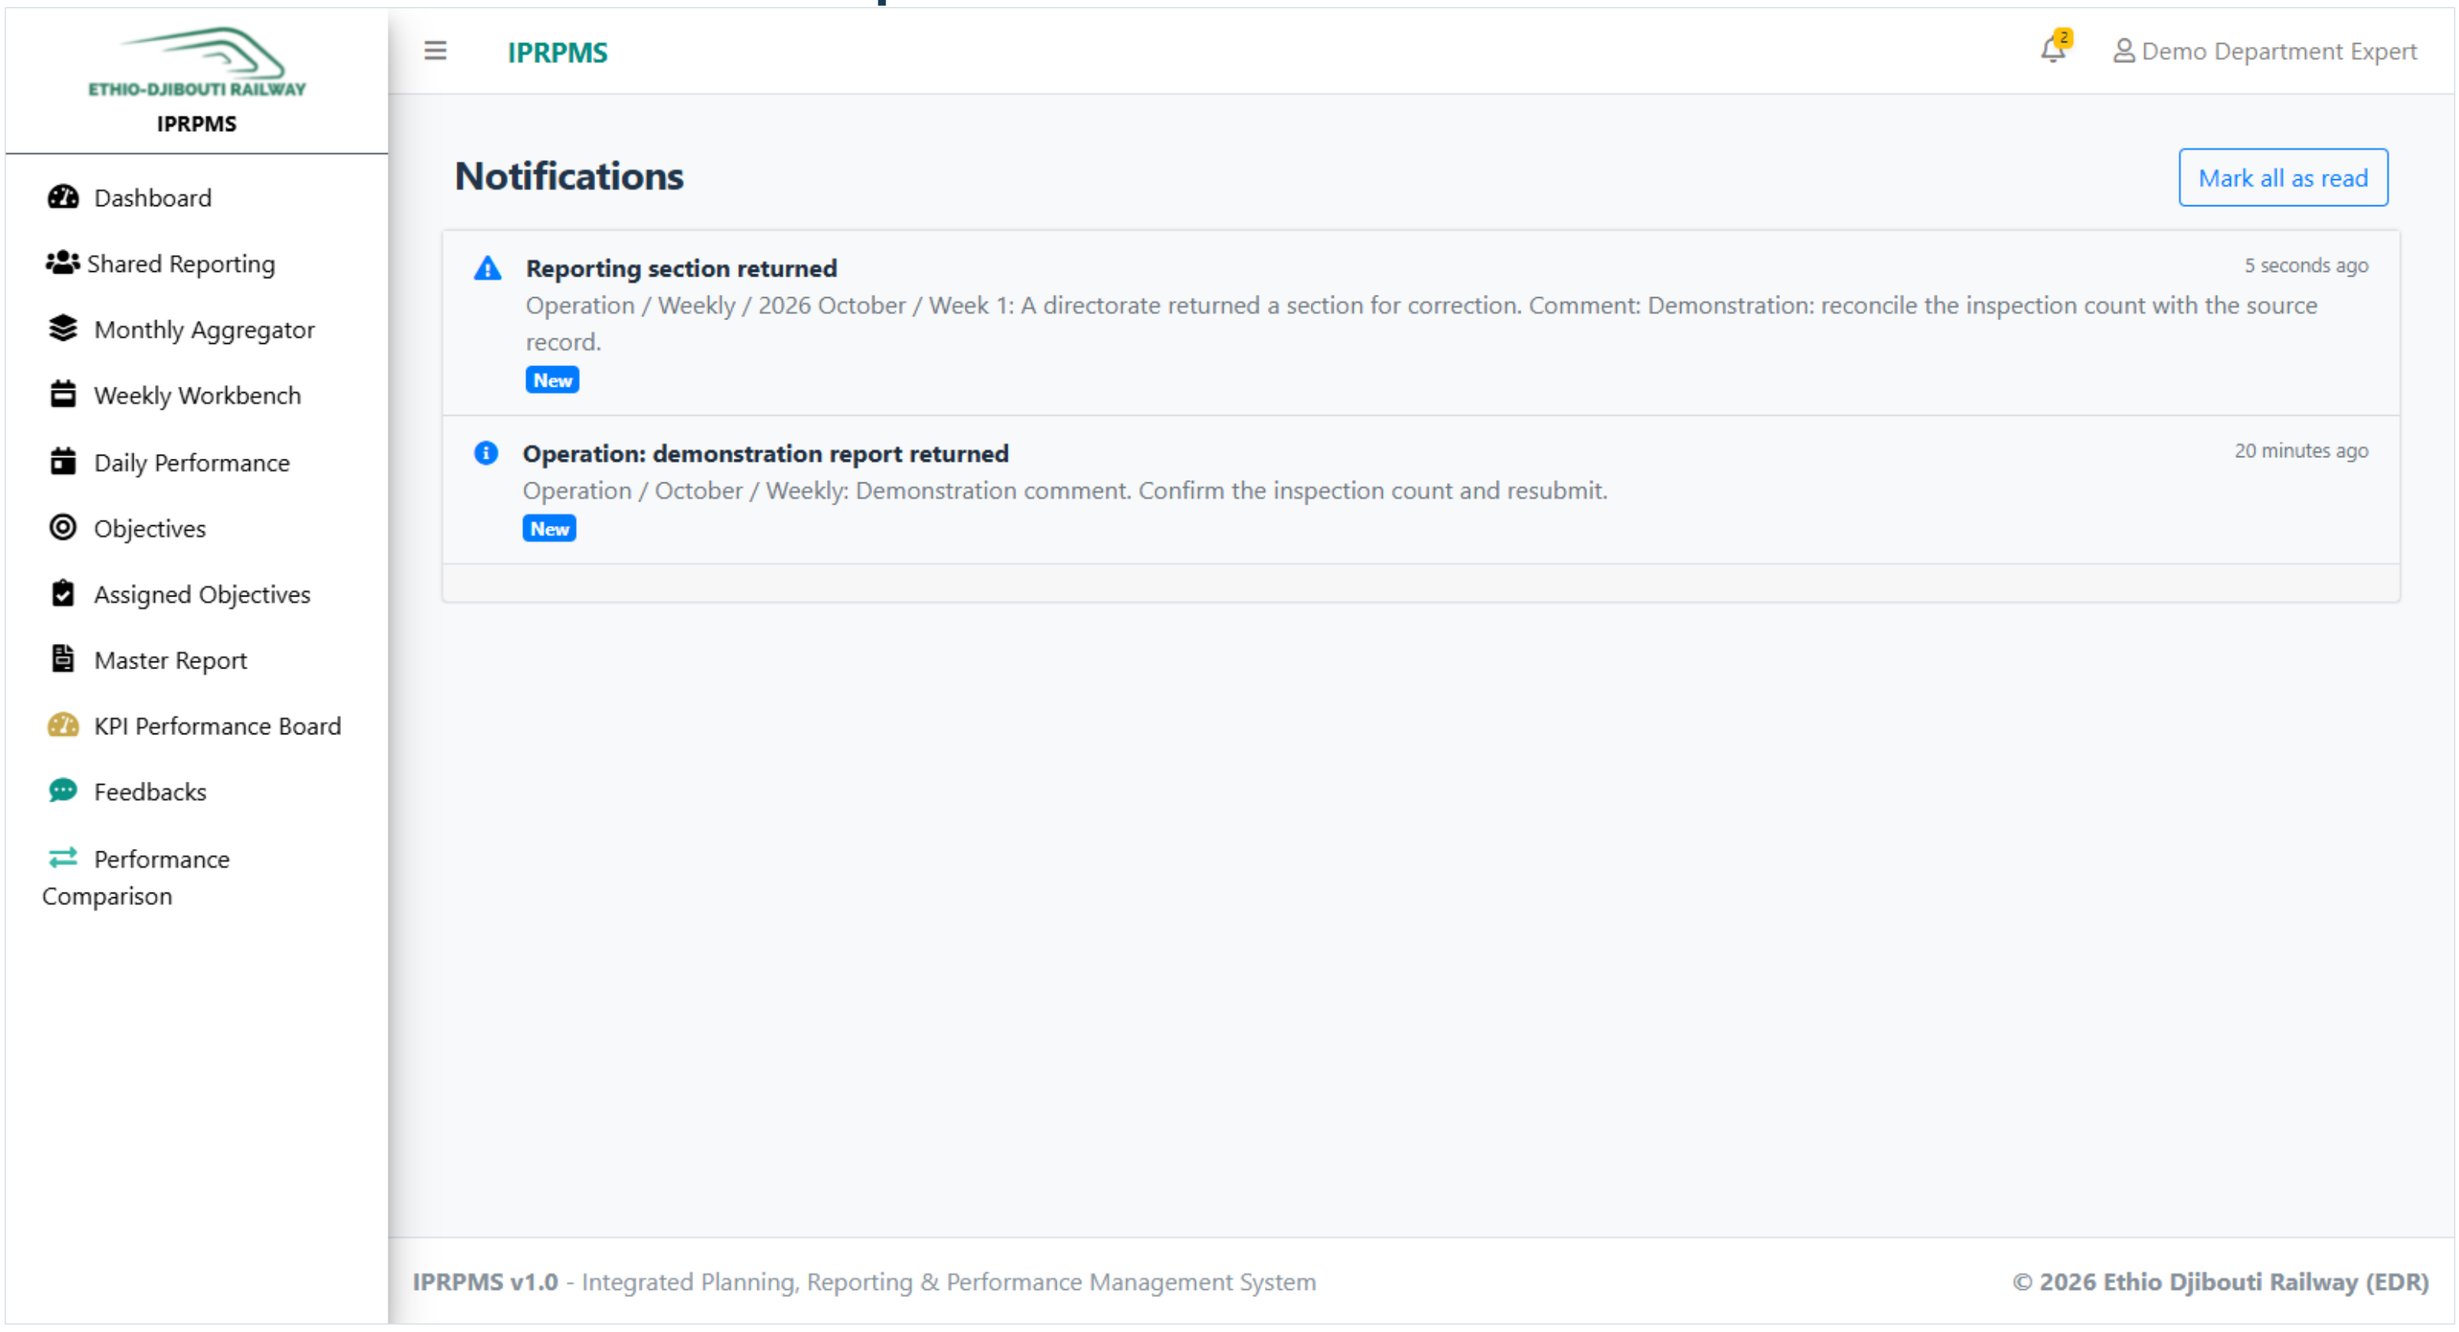

Plan and Report Chief: grant final performance approval

1. Verify the report belongs to the correct department and period.
2. Review the figures and the accumulated comments.
3. Click Grant final approval.

After this step: Final approved results become eligible for official reporting and comparison.

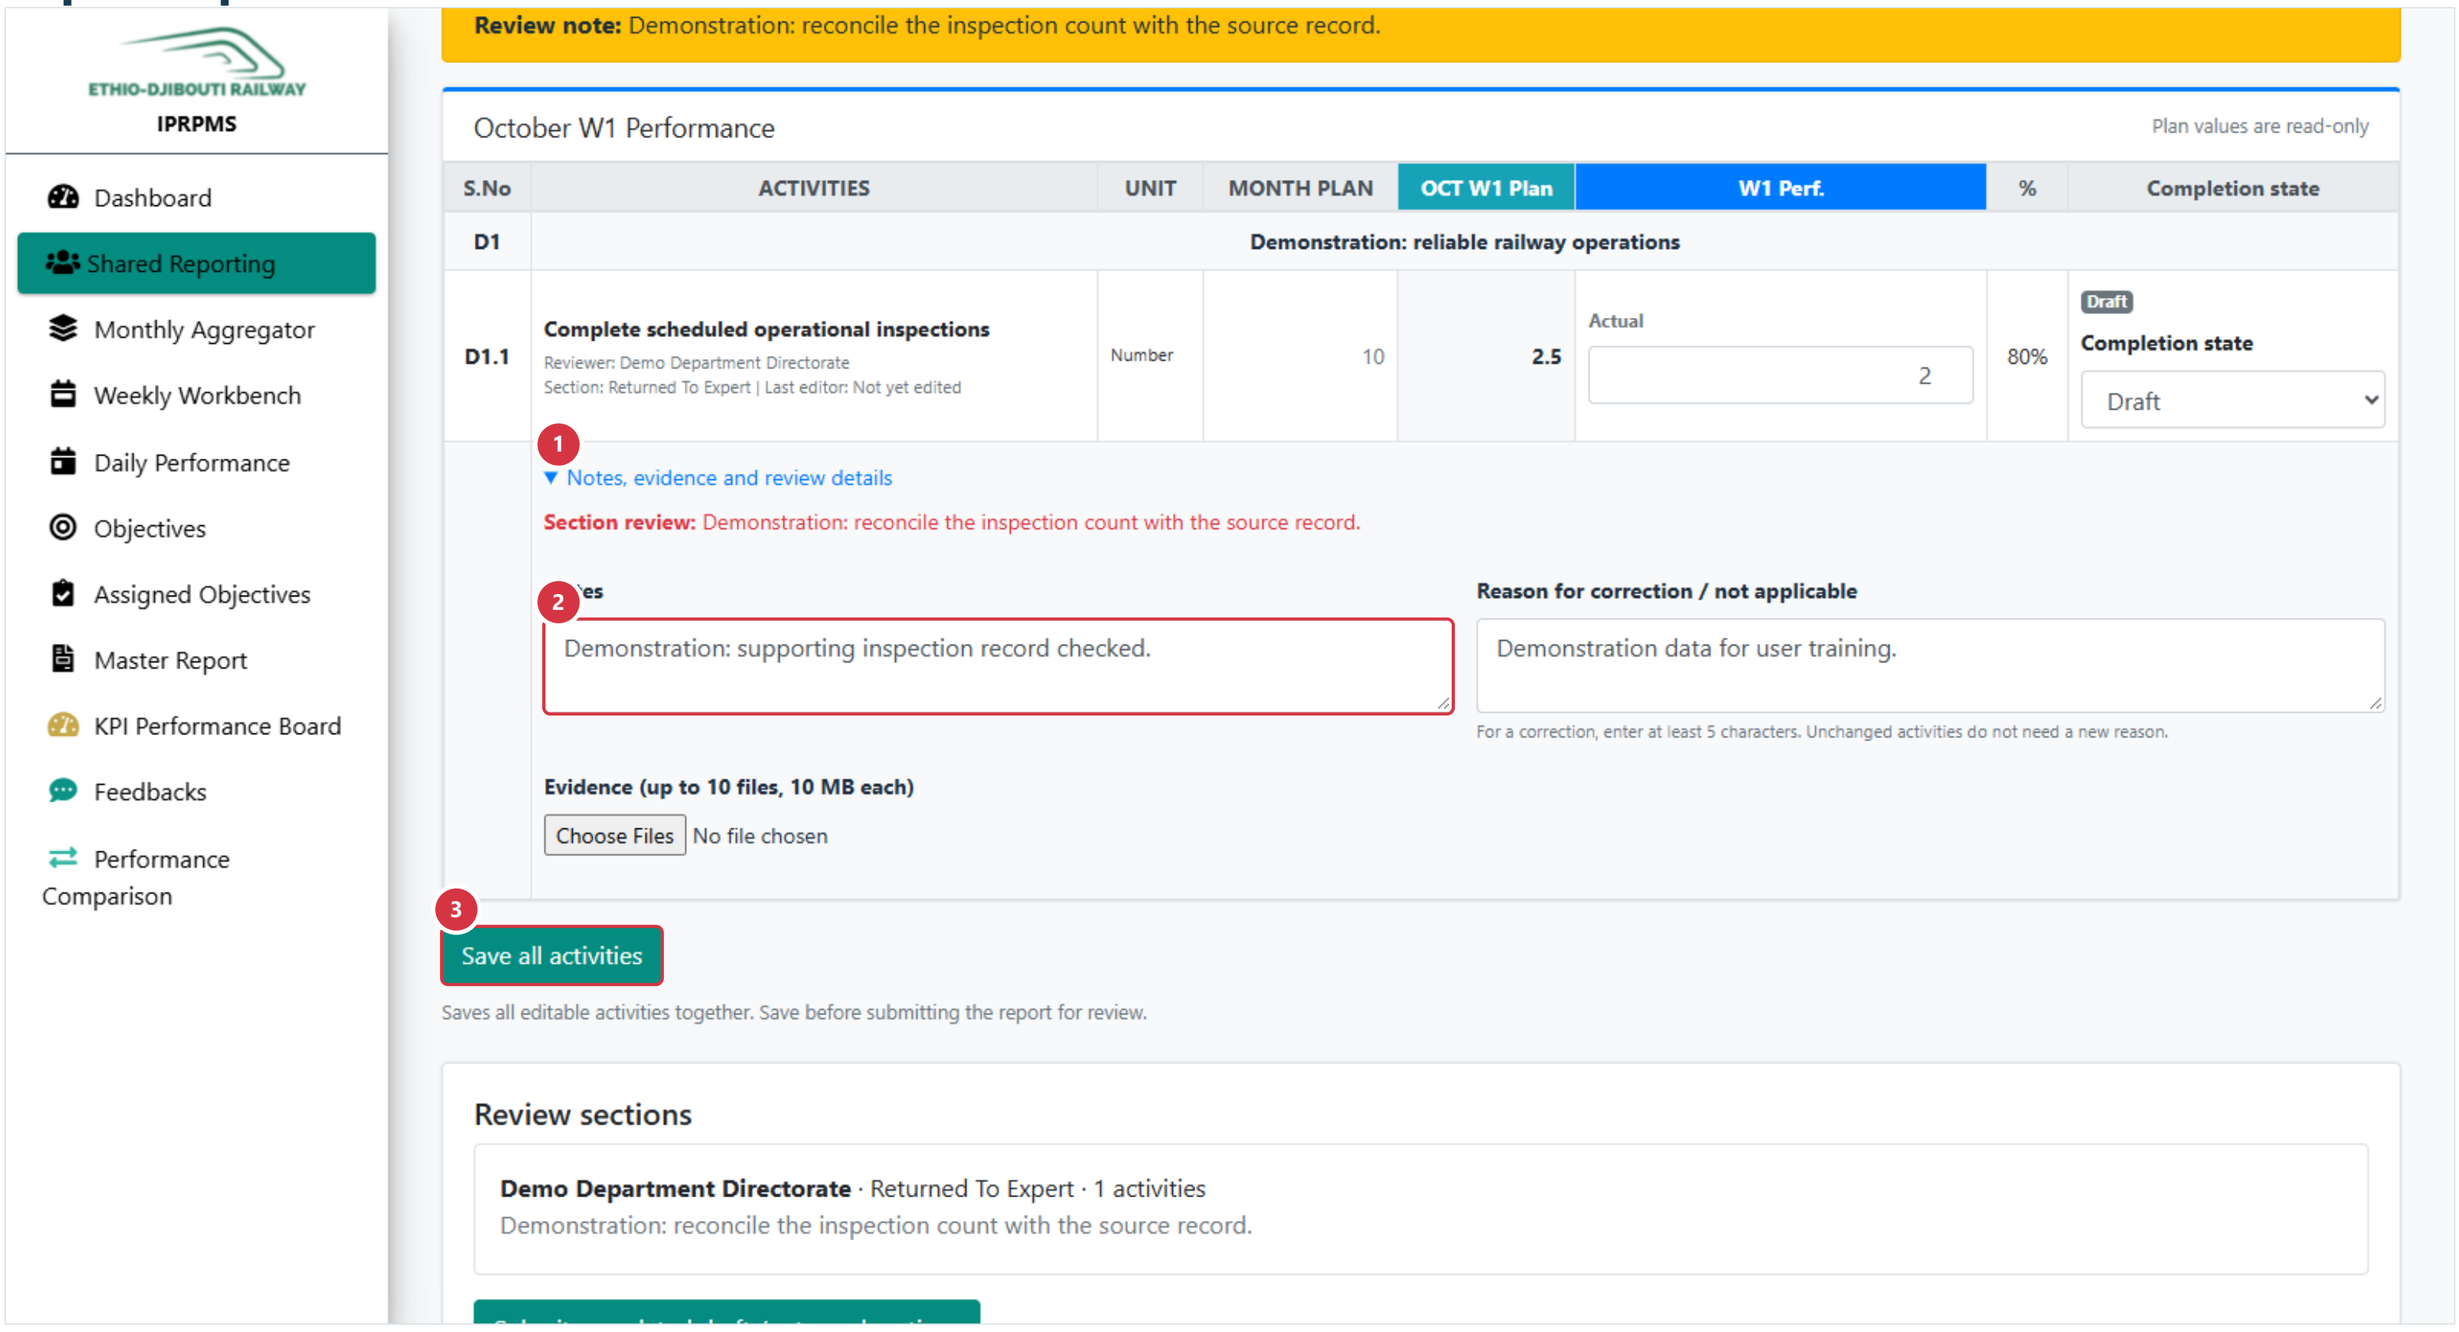

Follow a return notification to the report

1. Open Notifications.
2. Read the department, period and reviewer message in the returned-section notice.
3. Open the report link or mark the notice read after acting.

After this step: The demonstration notification was generated by a real return-section action in the temporary copy.

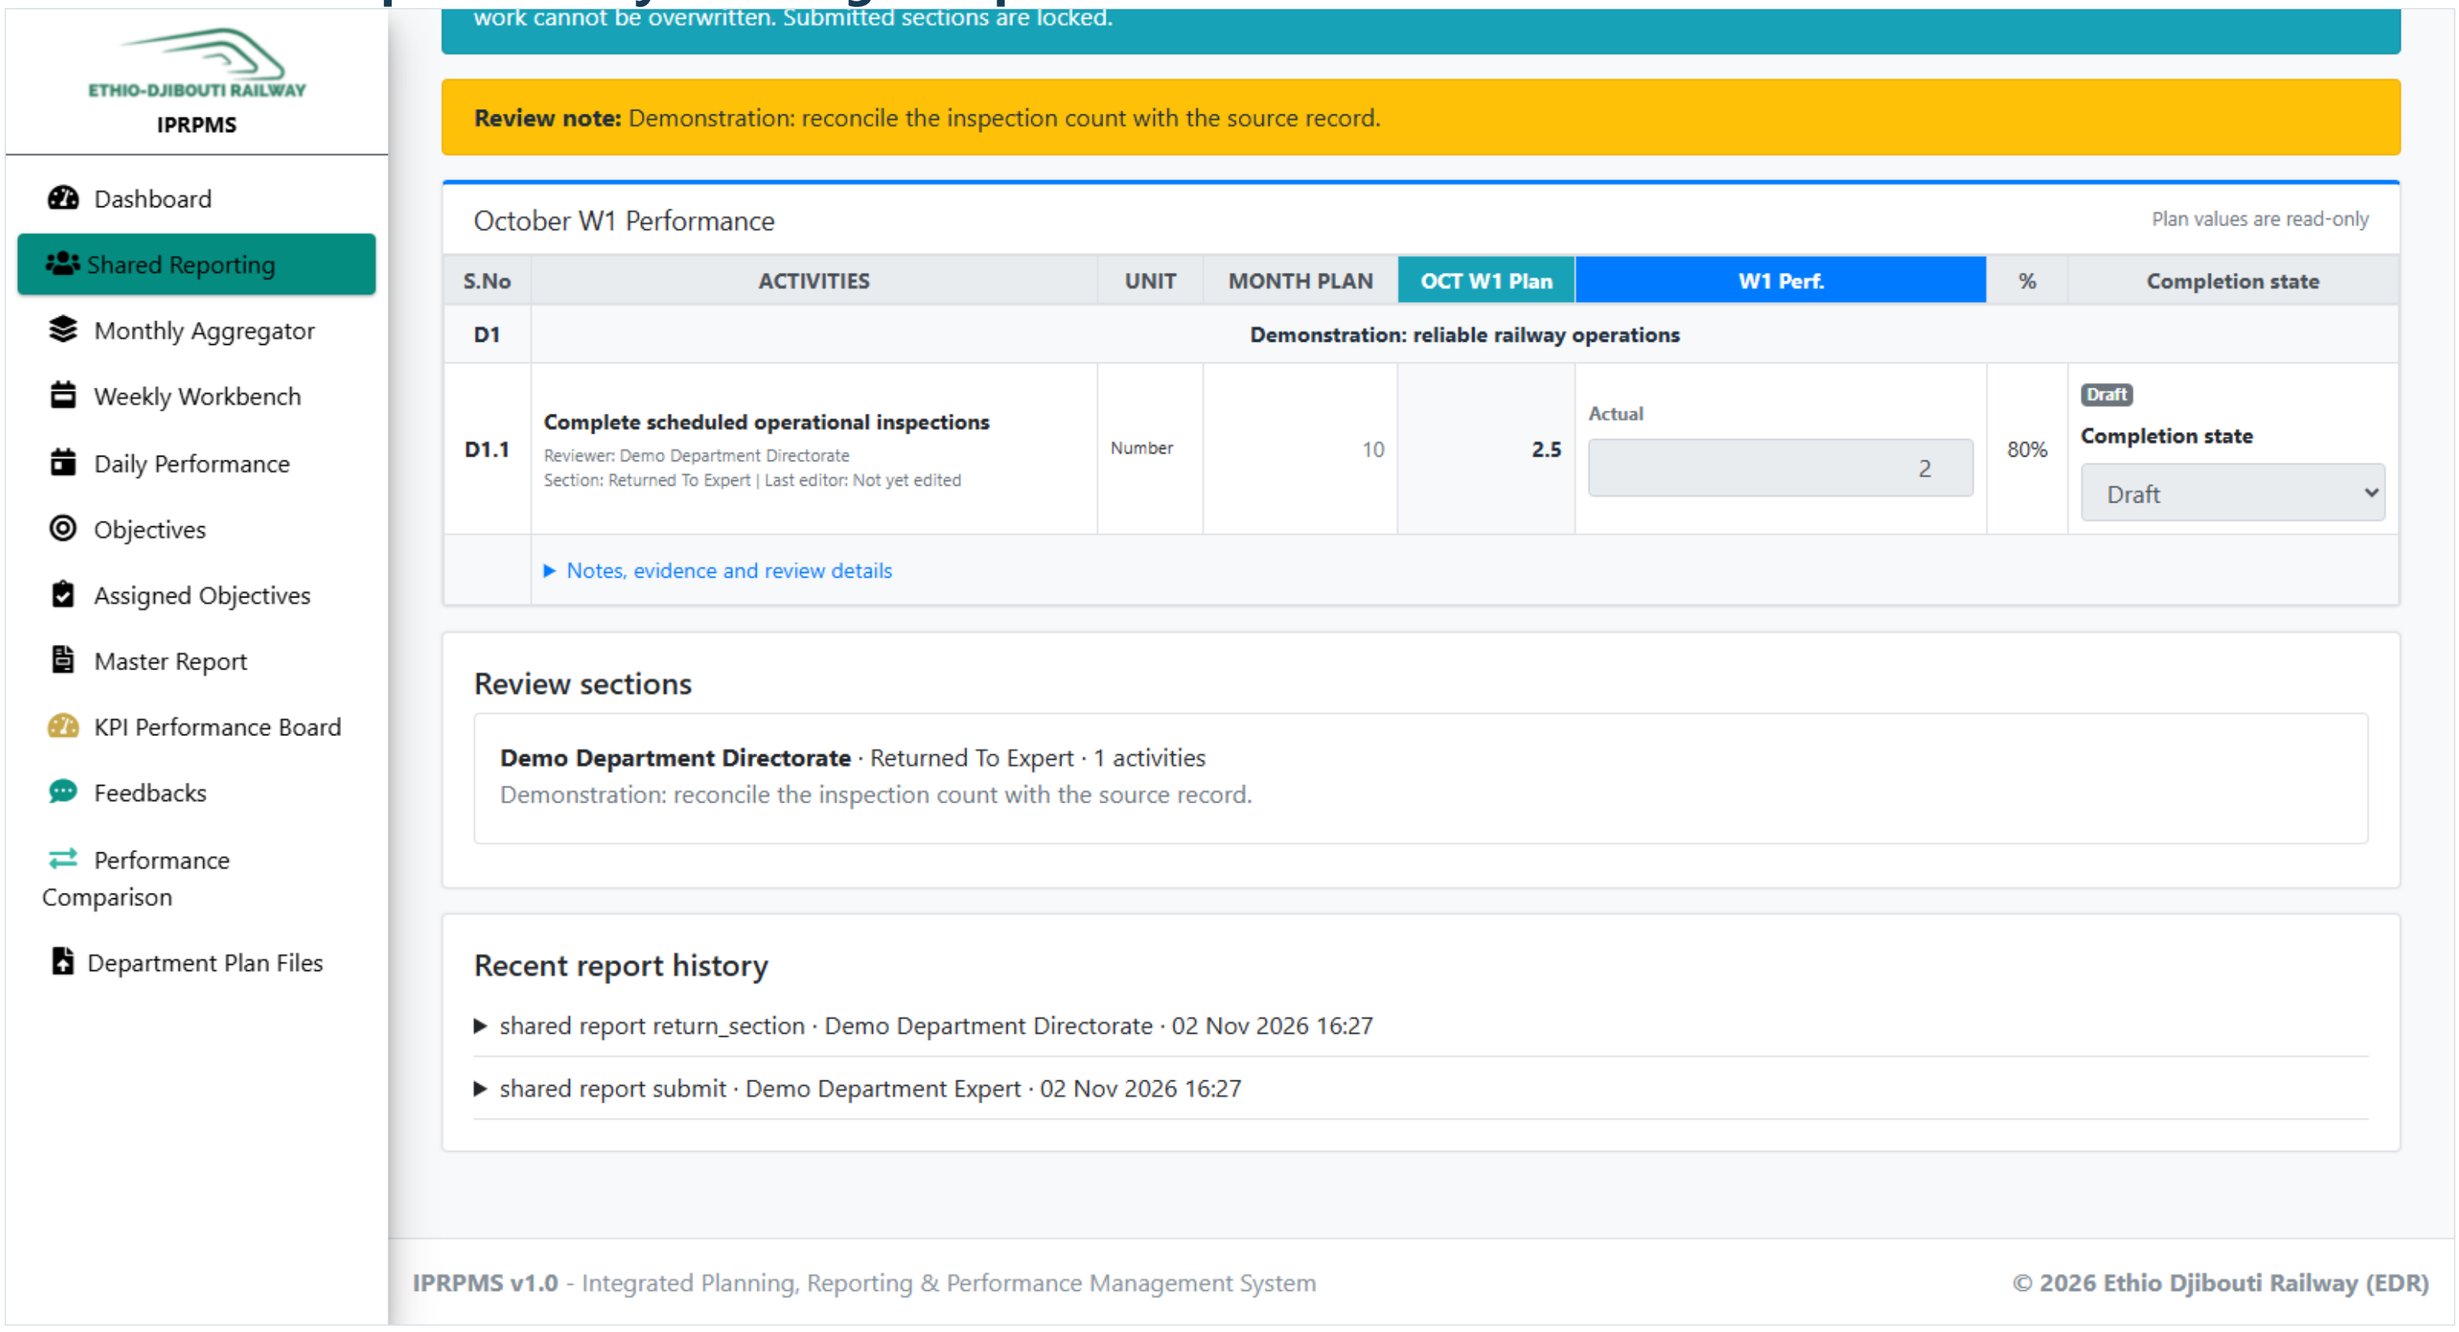

Expert: open a returned section and correction comment

1. Read the returned section and its correction comment.
2. Open the activity notes/evidence details to inspect the relevant data.
3. Correct the editable row, save and ask the coordinator to resubmit the completed section.

After this step: This capture follows an actual demonstration Submit and Return action performed through the application forms.

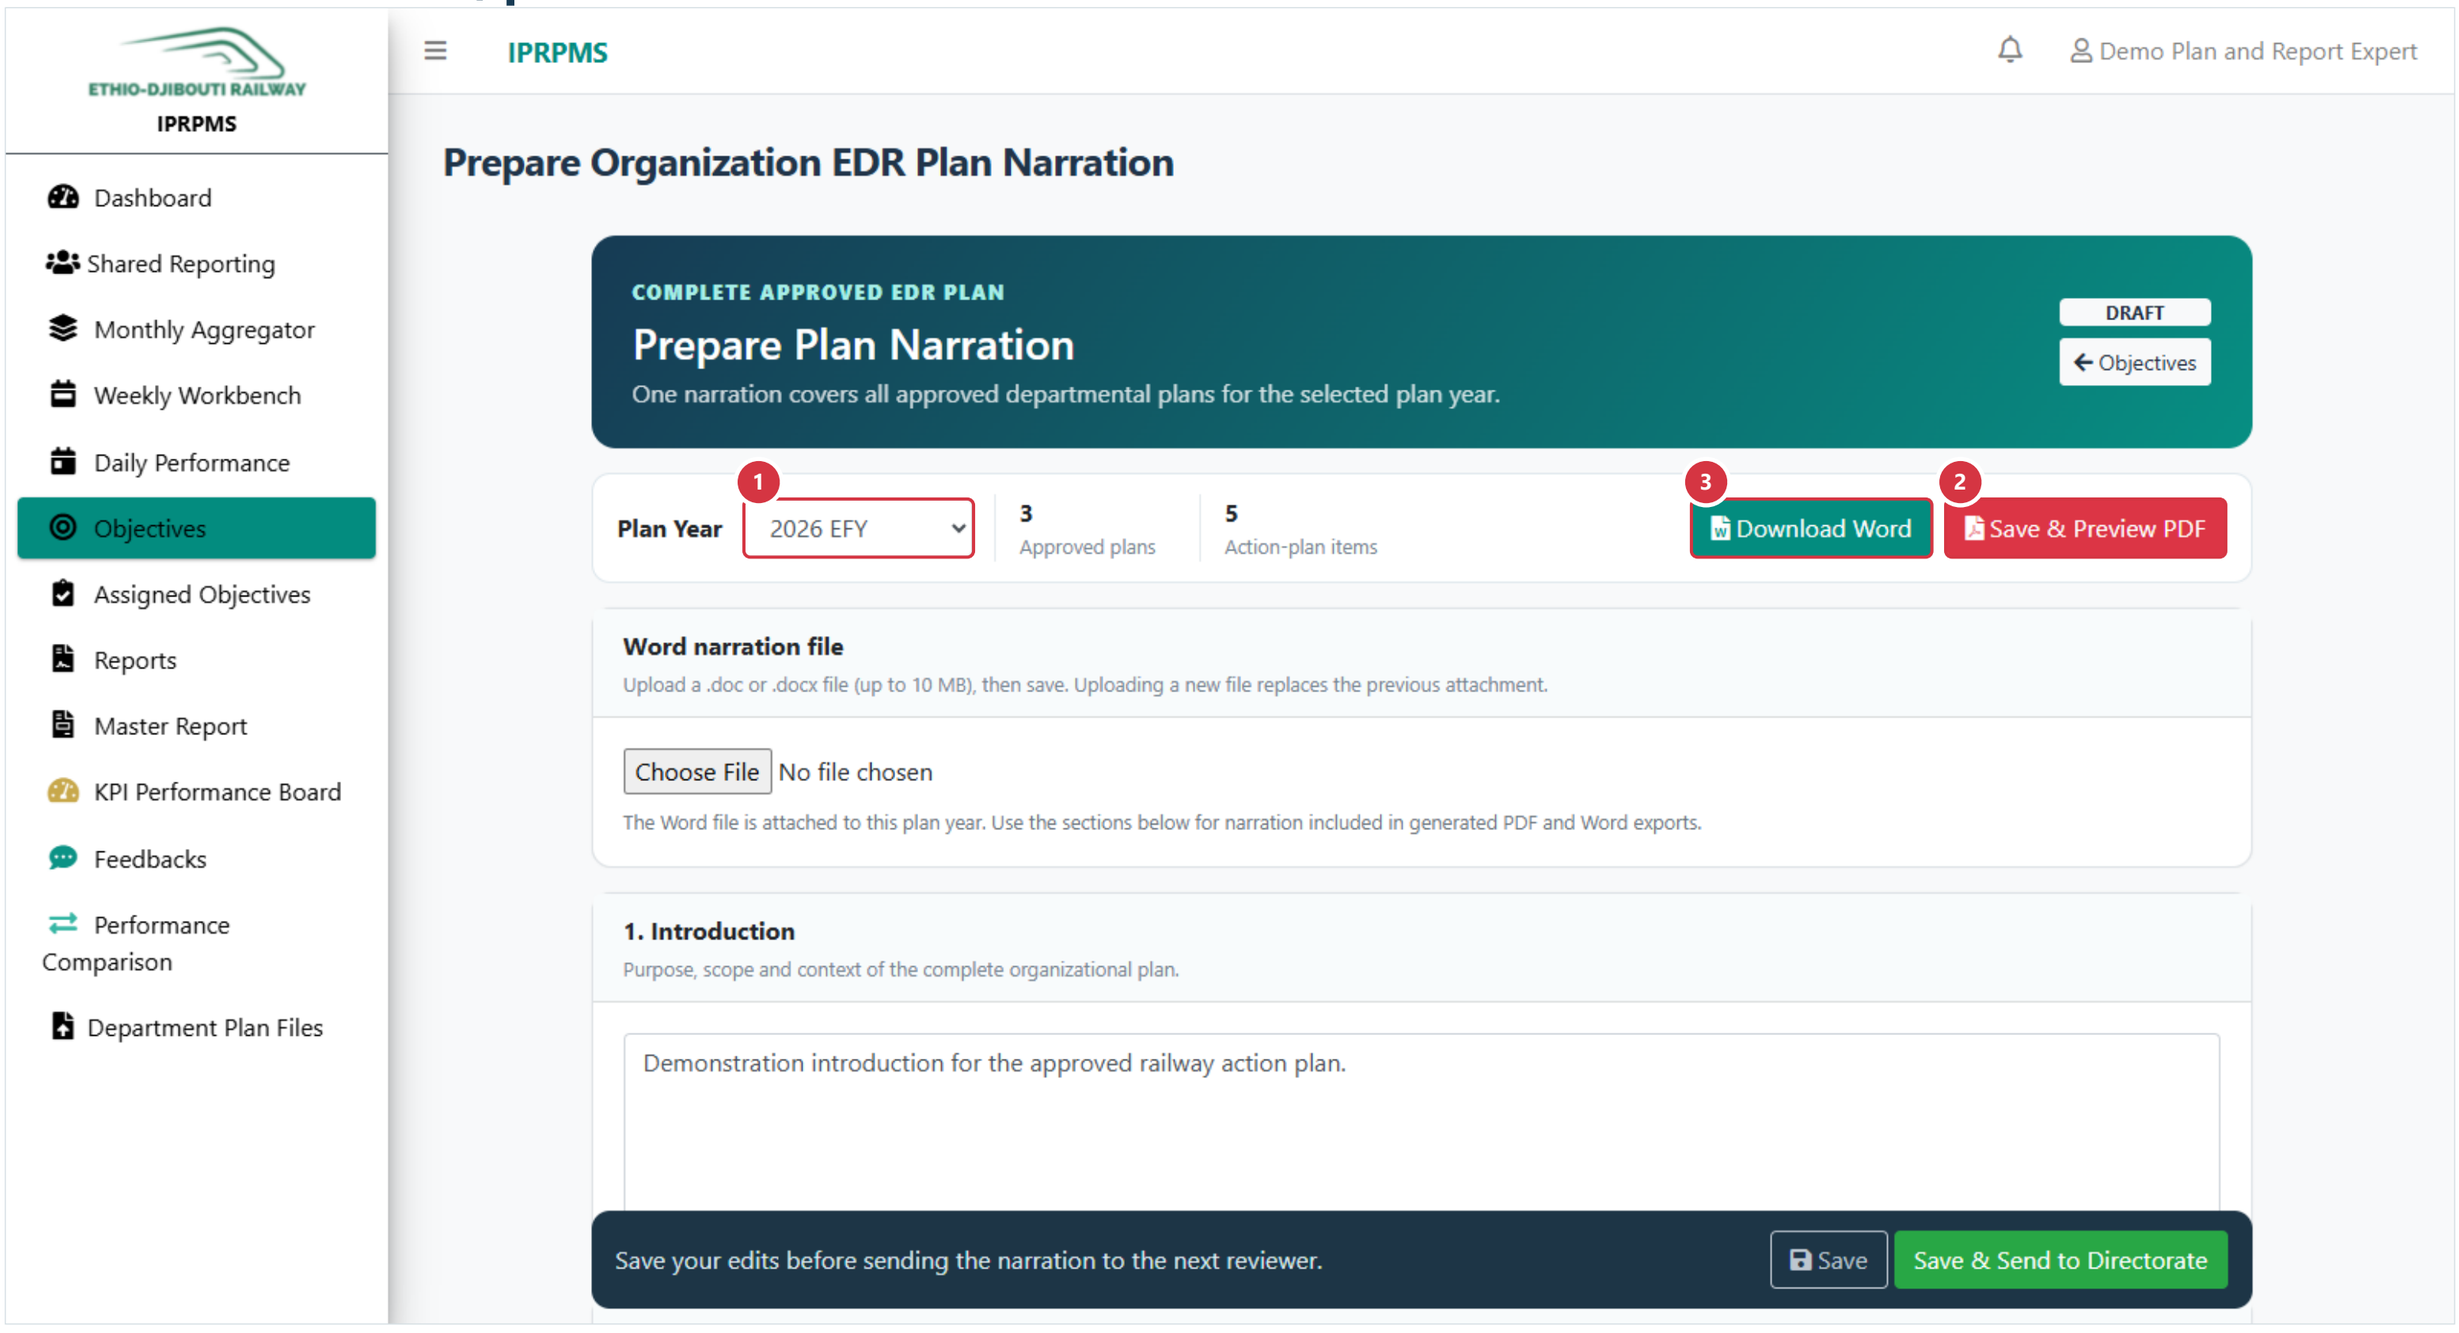

Read the real report history and origin department

1. Confirm the originating department in the report heading.
2. Scroll to Recent report history.
3. Read the action, actor, time and recorded reason before following up.

After this step: The demonstration history records the actual form submissions used to produce this capture.

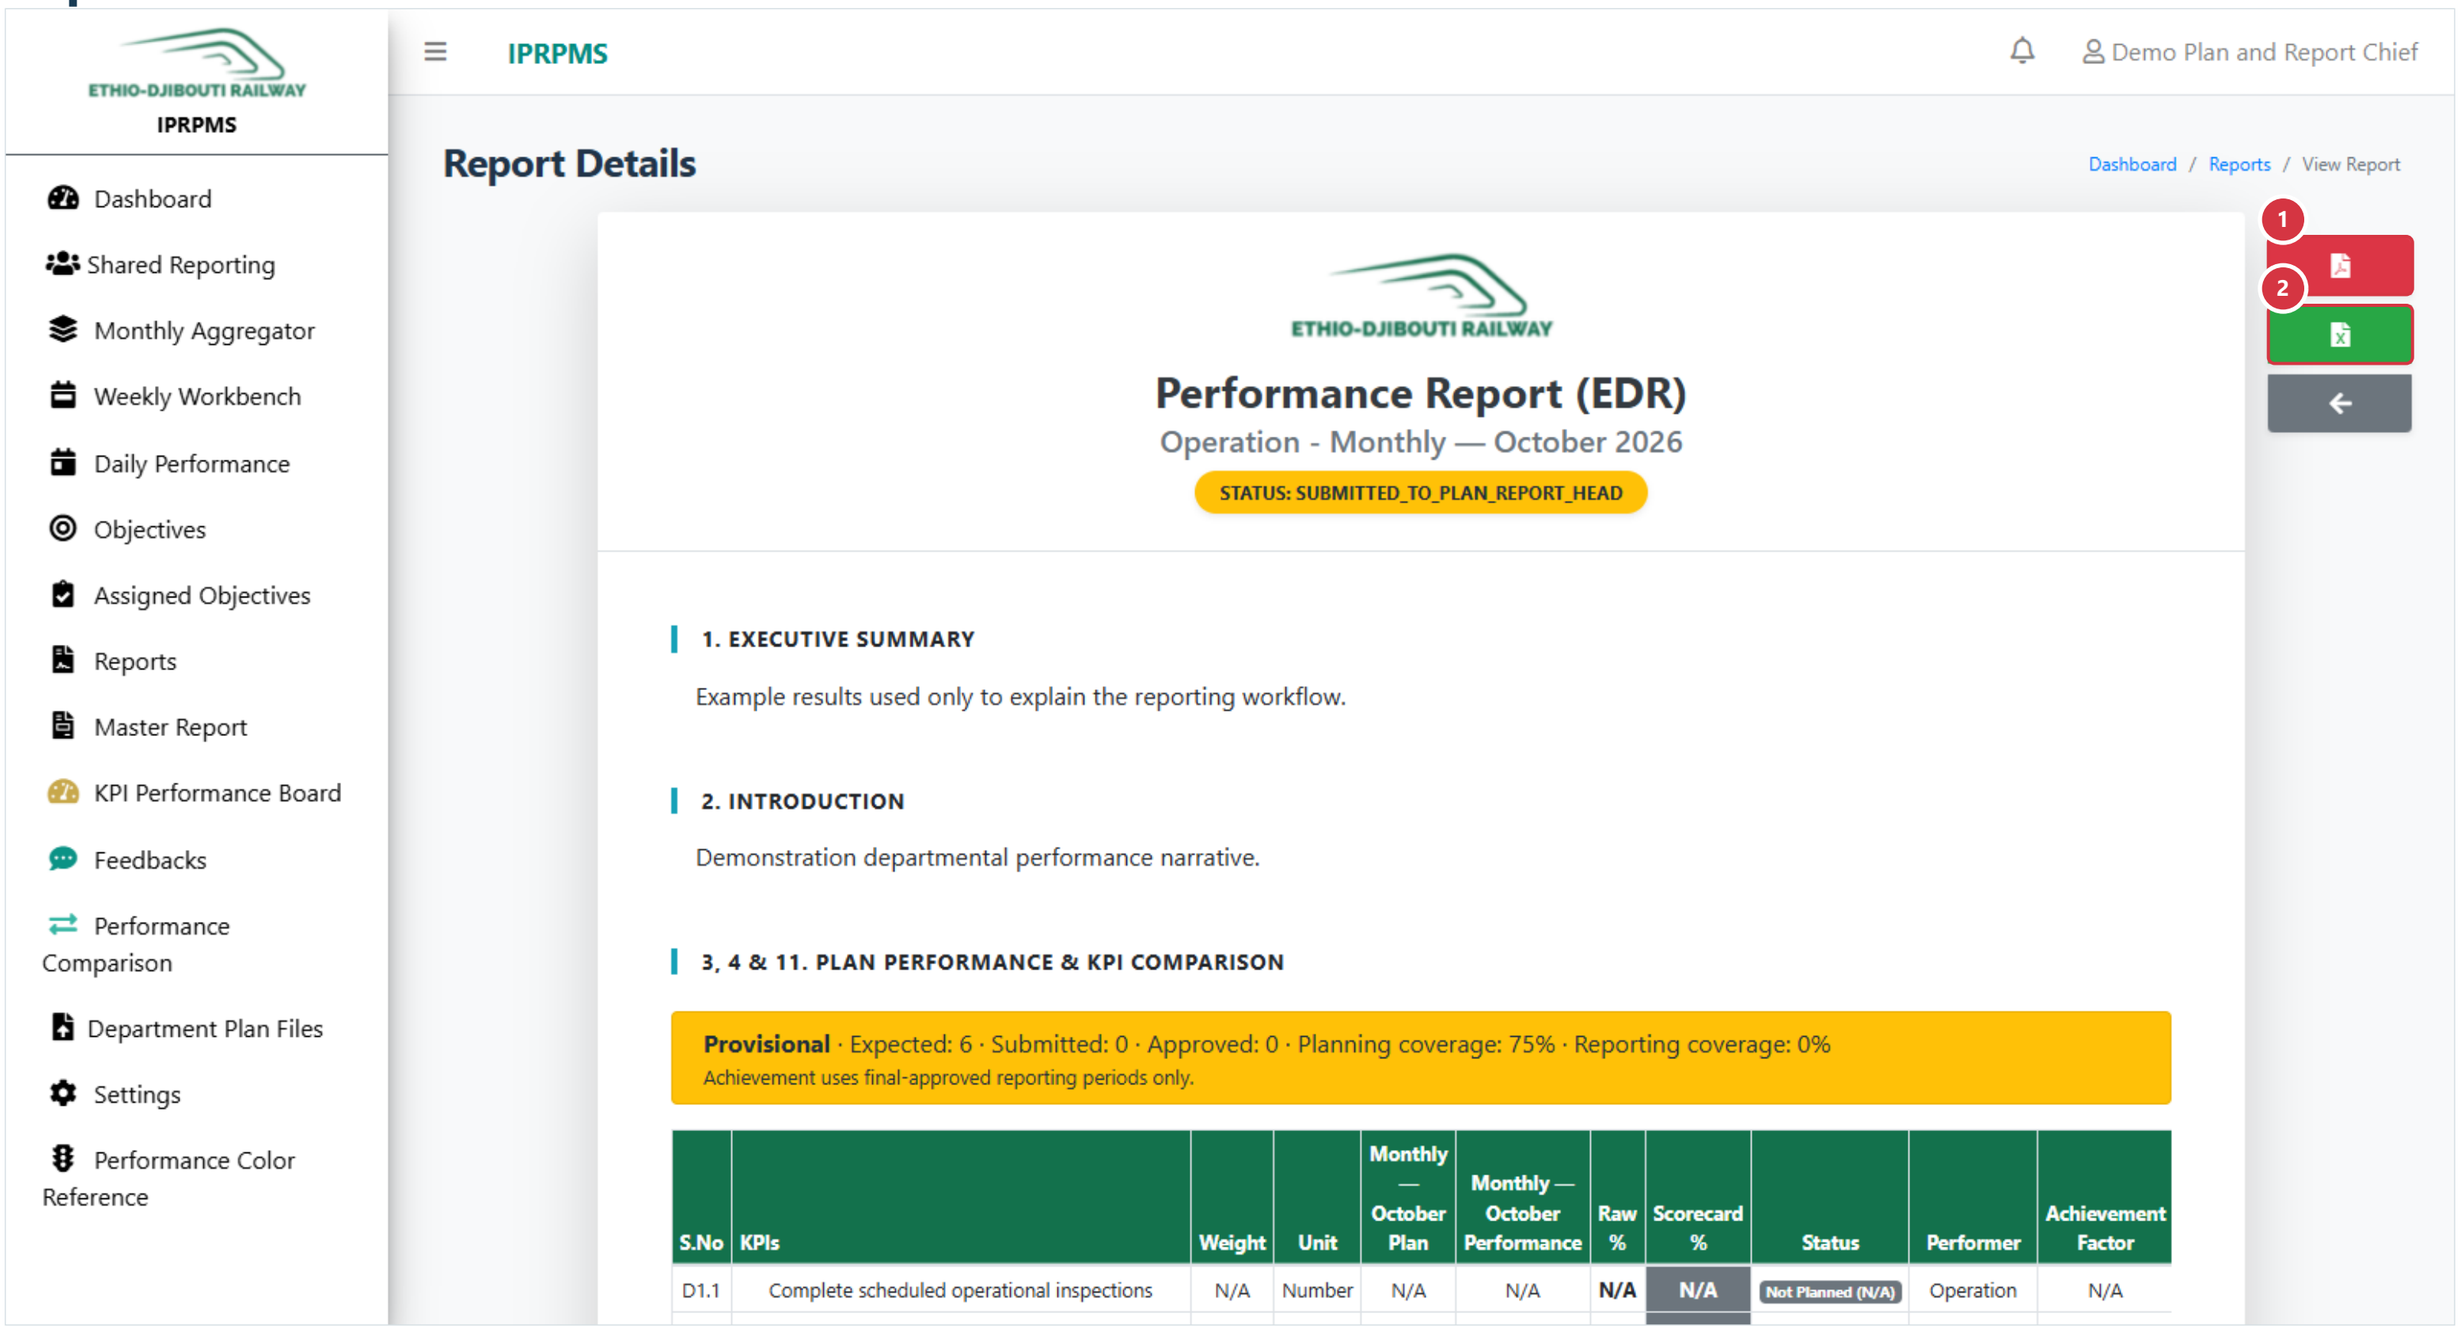

Plan narration: save, preview and Word download

1. Select the correct plan year and save your latest edits.
2. Click Save & Preview PDF to inspect the formatted document.
3. Click Download Word for the generated Word file.

After this step: The page also permits a separate uploaded Word narration attachment for the selected year.

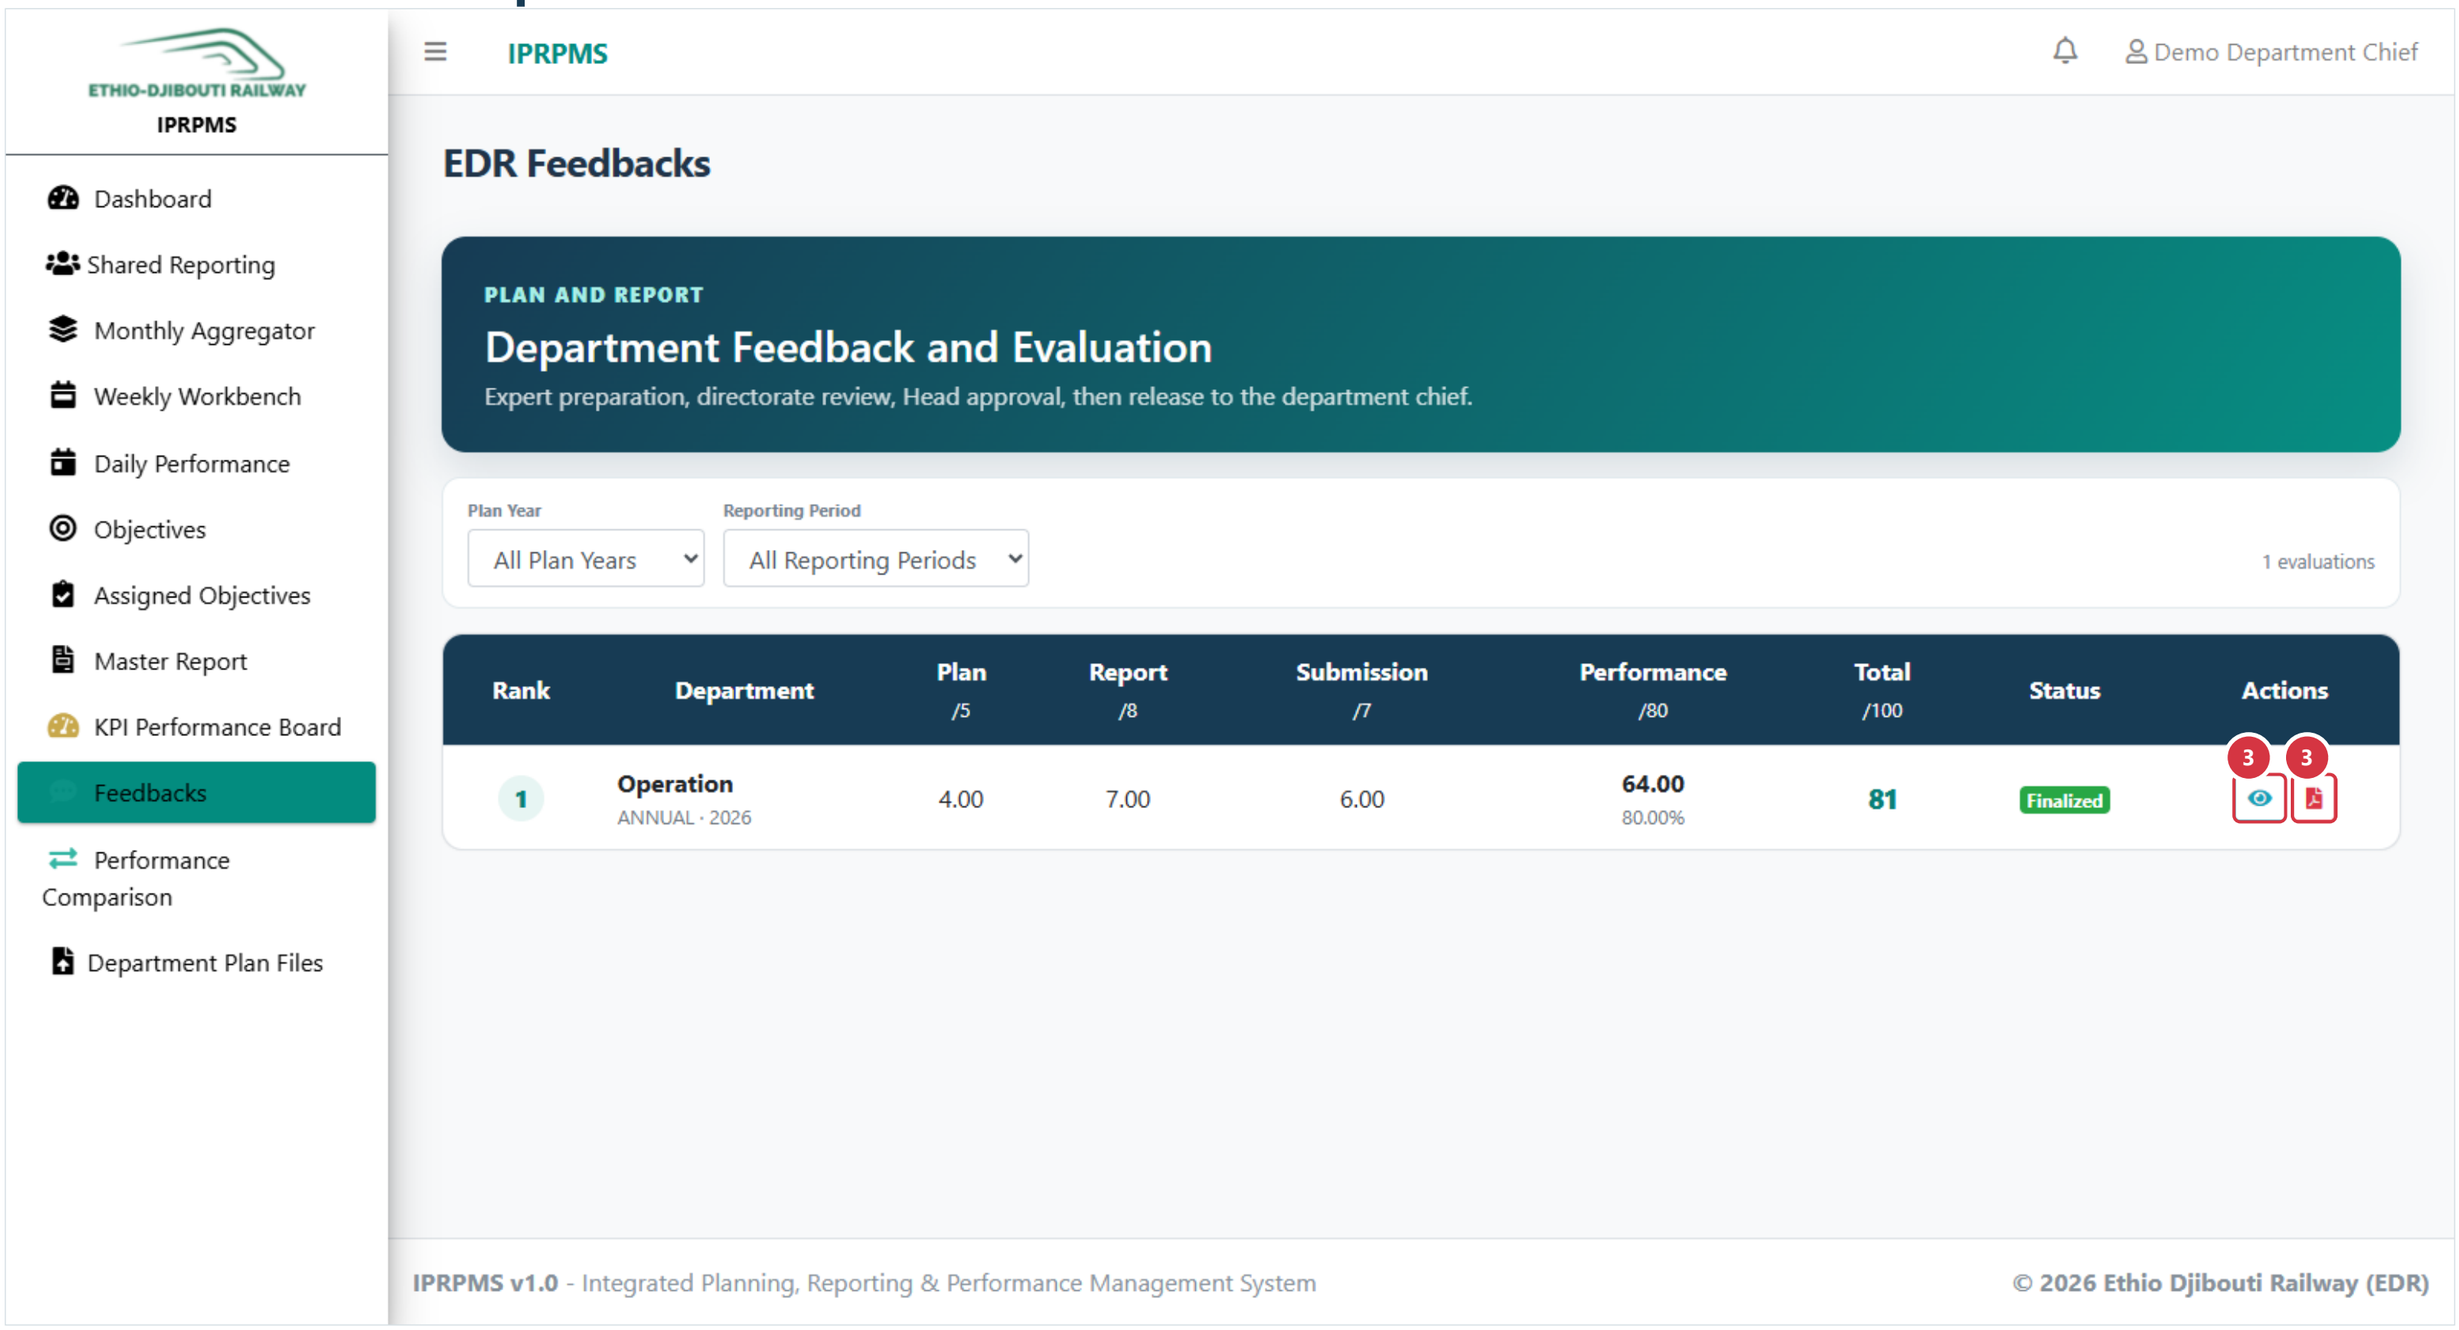

Report: download PDF or Excel

1. Use the PDF icon on the report to download PDF.
2. Use the Excel icon for the spreadsheet export when permitted.
3. Verify the department, reporting period and year before distributing it.

After this step: The actual reading page has PDF and Excel icons. Other formats depend on the report workspace available to your role.

Chief: read official departmental feedback

1. Open Feedbacks.
2. Locate the finalized evaluation for your department.
3. Use View or PDF to read its findings and scores.

After this step: Department Experts do not receive the same draft evaluation access as the Plan and Report preparation roles.

Choose the manual for your assigned role

Use the exact account role, not just a similar job title. Coordinator and backup duties are included with Department Expert.

01. Department Expert & Reporting Coordinators
02. Department Directorate
03. Department Chief (Head)
04. Plan & Report Expert
05. Plan & Report Directorate
06. Plan & Report Chief (Head)
07. System Administrator
08. HR Manager
09. Department Head
10. Supervisor
11. Employee
12. Auditor
13. General Head Office - Viewing Role

When something does not work

Know what is an access issue, a review condition or an observed application problem before asking someone to change data.

Missing activity or Submit button

Check account department and role, activity assignment approval, reporting frequency, coordinator/backup responsibility, record stage and any submission window.

Observed task-page limitation

In the inspected build, My Tasks and task details returned application errors. Working task assignment is documented, but employee task-report submission and detail approval cannot honestly be illustrated until IT fixes them.

Optional project workspace

Project routes rendered, but sidebar links were hidden in the inspected build. Project instructions apply only where the administrator enables access. No additional project approval chain is invented.

Get effective help safely

Provide module, department, year/period, record reference and exact message. Hide personal information in screenshots. Never share credentials. These manuals do not change the working application or database.
