System Administrator

Your responsibilities, complete workflow, exact clicks and return paths.

Read first: the Start Here guide explains how the whole system works. Then use this manual to do your part, check the outcome and hand work to the right person.

Understand your job before the buttons

Keep this page in mind whenever you receive a new record. It explains your responsibility and where your part stops.

Your job

Give people the correct access, maintain the organization structure and settings, and investigate access or workflow problems without changing business results just to bypass controls.

What you receive

Authorized account and department changes, access requests, configuration decisions and incident details from users.

Who receives your work

Working individual accounts to their intended owners; corrected access to the proper department and role; unresolved application issues to the technical maintainer.

Your limits and important distinctions

Full technical access is not a reason to skip business review. Preserve passwords unless a reset is explicitly requested. Never share an account register or password in screenshots.

Your workflow, from first action to finish

Read down the page. Each step has an outcome; do not jump ahead simply because a button is visible.

1

Confirm the organization structure

Maintain active departments and reporting defaults using the approved organization list.

2

Create the individual account

Set the correct official email, department, role and active status. Link an employee where appropriate.

3

Verify practical access

Check the saved role badge and department. For coordinators, ask the Department Chief to assign the reporting team separately.

4

Support controlled settings

Apply approved branding, workflow windows and deadlines; validate the affected view after saving.

5

Investigate with evidence

Use record scope, status, audit activity and the exact error rather than granting broad roles to make a button appear.

6

Hand back and protect the account

Ask the owner to sign in, change a temporary password if required and confirm the intended task. Keep credentials private.

Find the task you need

Use the page number or click a task name in the PDF. Section introductions explain the purpose before the screen-by-screen actions.

First access and everyday account safety 5

Maintain departments and their reporting defaults 11

Create, activate and correct user-role assignments 14

Employee records and account links 19

Review branding, workflow settings and audit history 23

Monitor the scorecard and data-quality findings 32

Optional: project records when the workspace is enabled 36

Completion checklist and help 44

First access and everyday account safety

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Use your own account. Your department and role decide what you can see and which decisions you can make. Never use somebody else's account to reach a missing button.

Before you click

Have your official account details ready. Open the address supplied by IT, enter your email and Access Key, then click Authenticate. A first-password screen appears only when your account requires it.

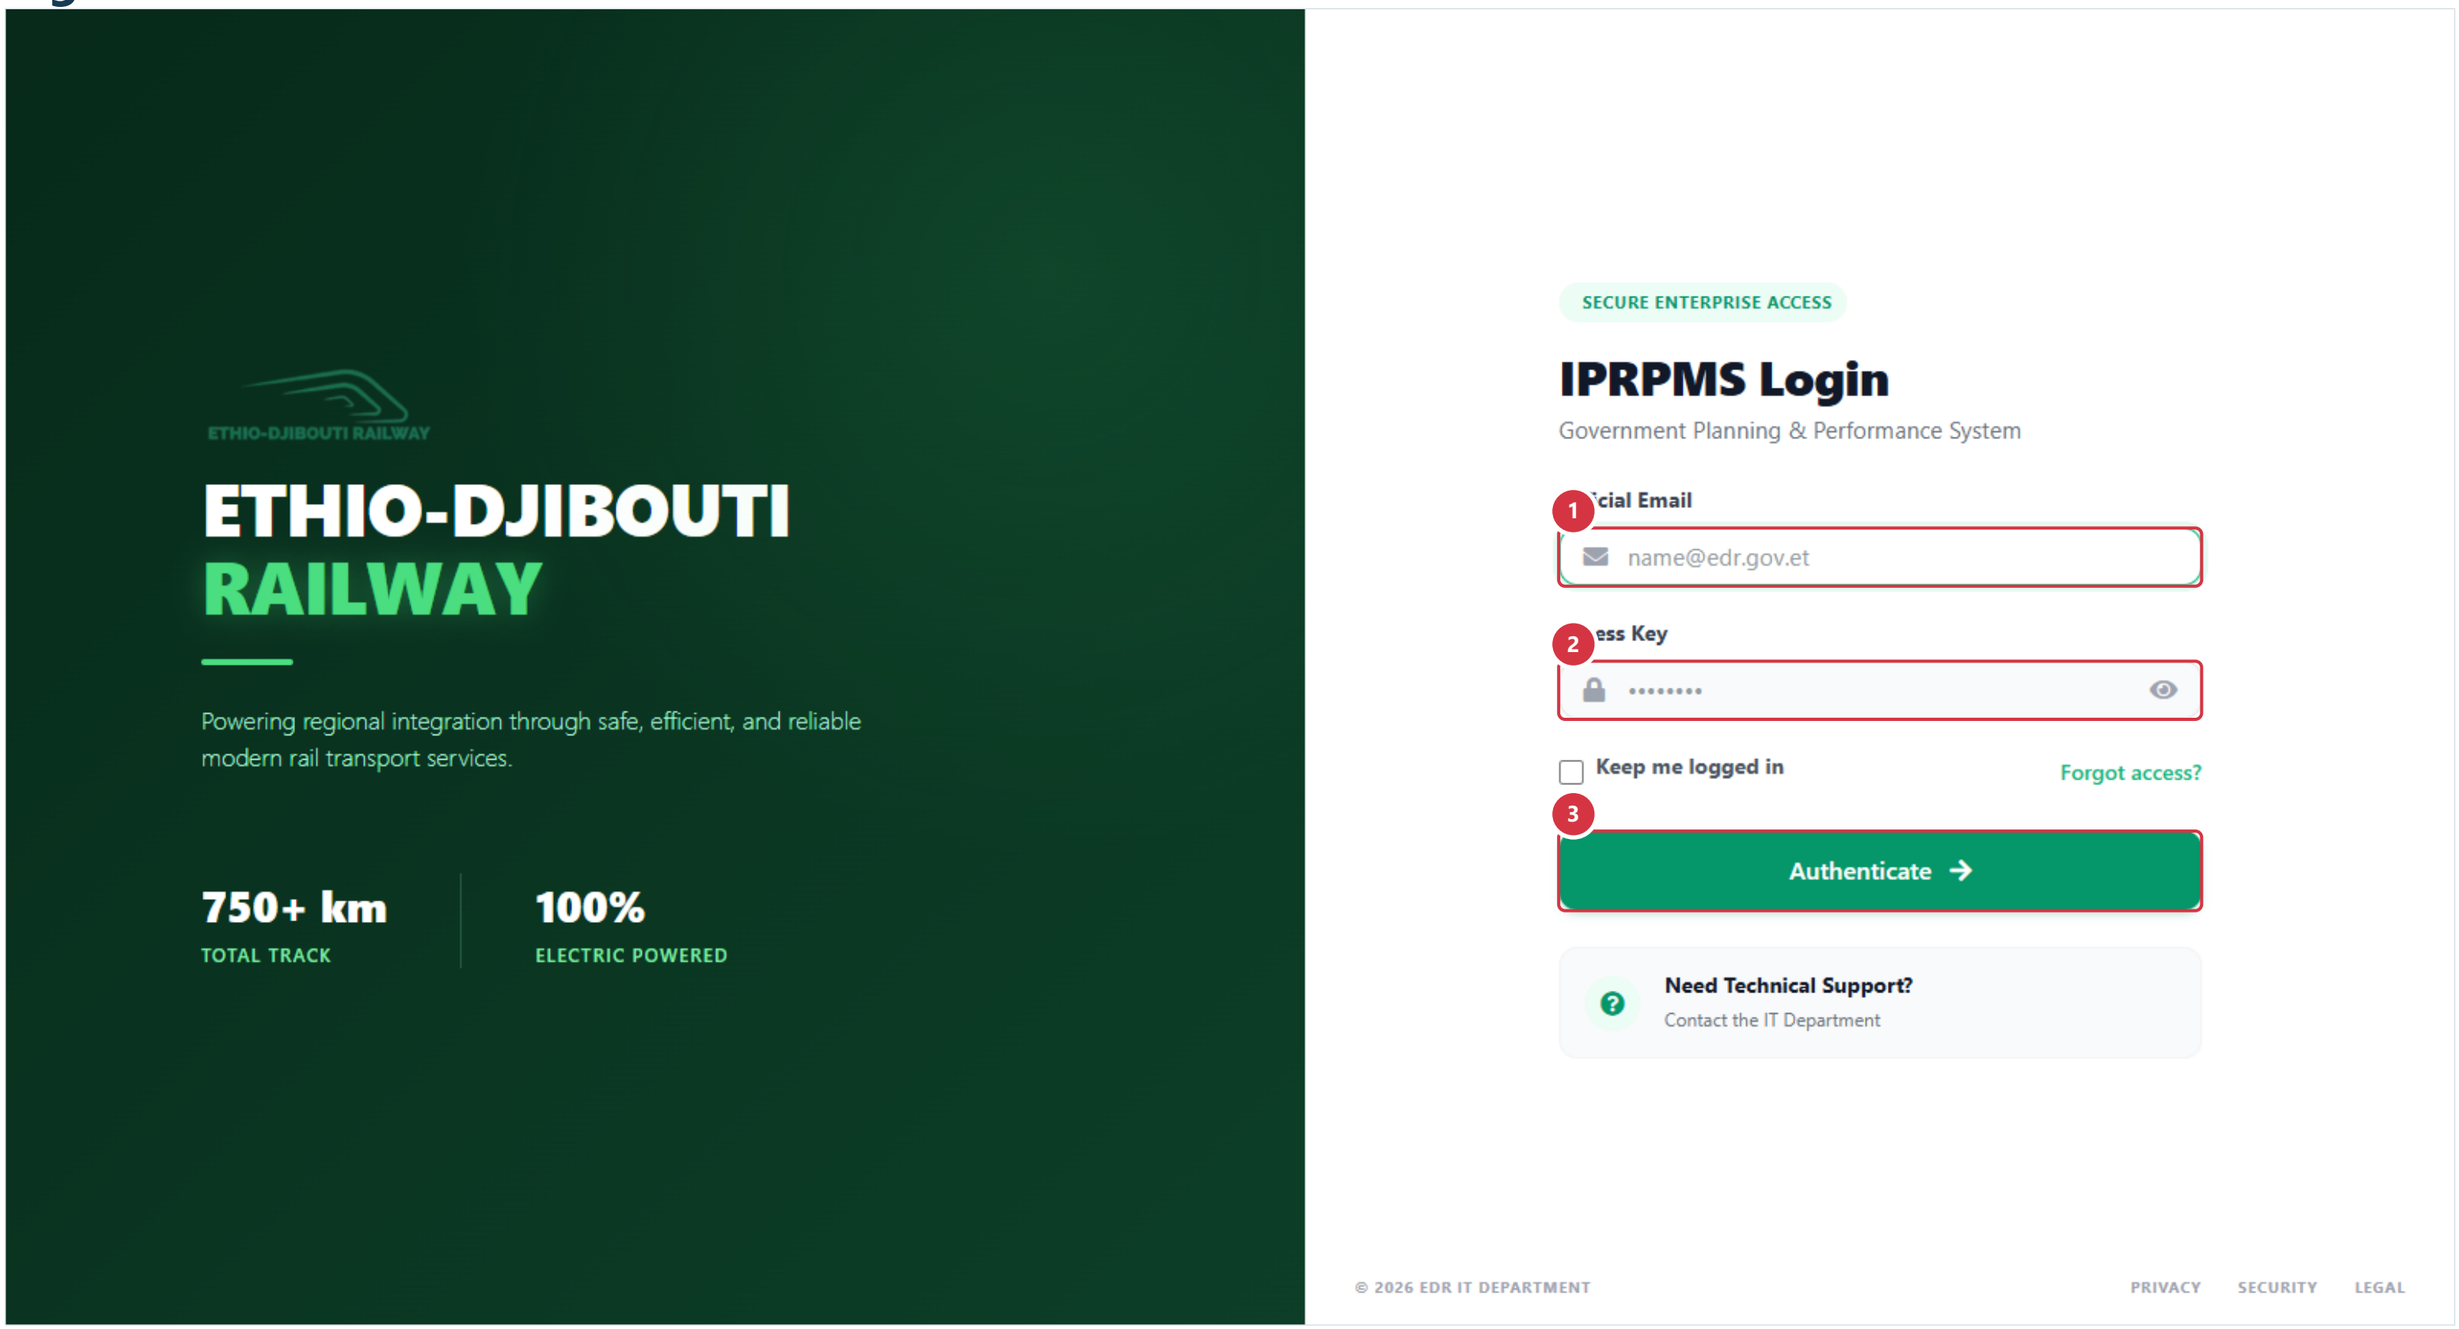

What to check

Check the name and role at the top right. Change your temporary password when prompted. Your profile is for your own name, email and password; department and role changes belong to the administrator.

How you know it worked

You can open the dashboard with the correct account. The notification bell shows work sent to you. On a shared computer, sign out when finished and do not choose Keep me logged in.

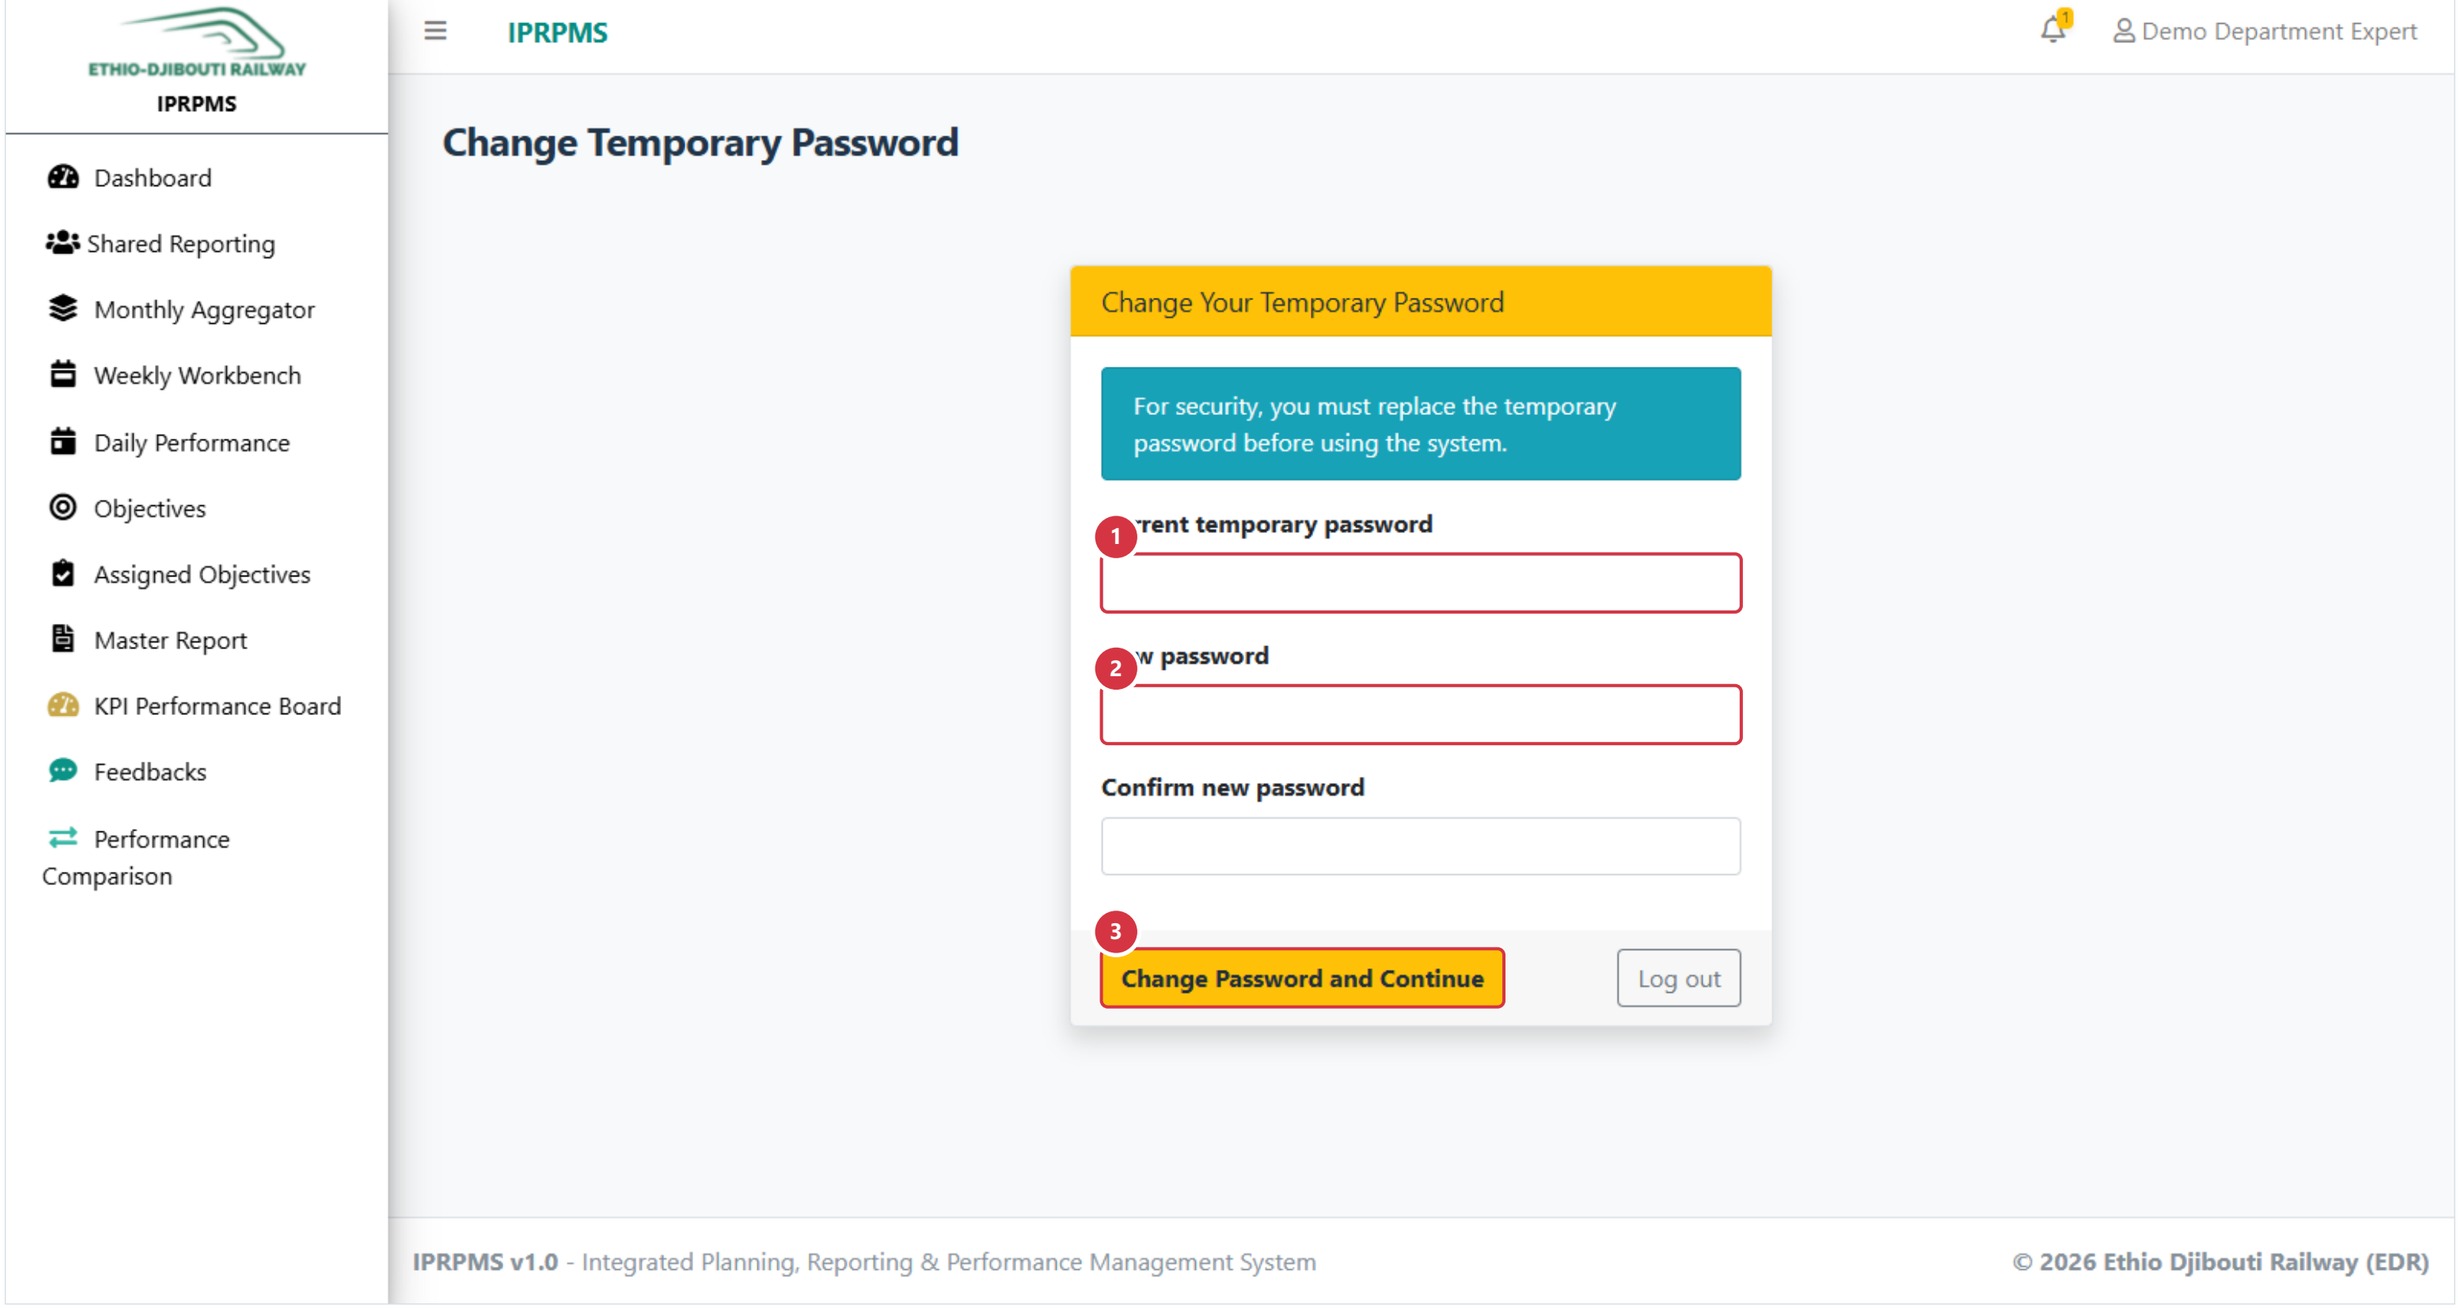

Sign in to IPRPMS

1. Enter your official email in Official Email.
2. Enter your own access key in Access Key.
3. Select Keep me logged in only on your own device, then click Authenticate.

After this step: The dashboard opens after authentication. Password fields in this handbook remain blank.

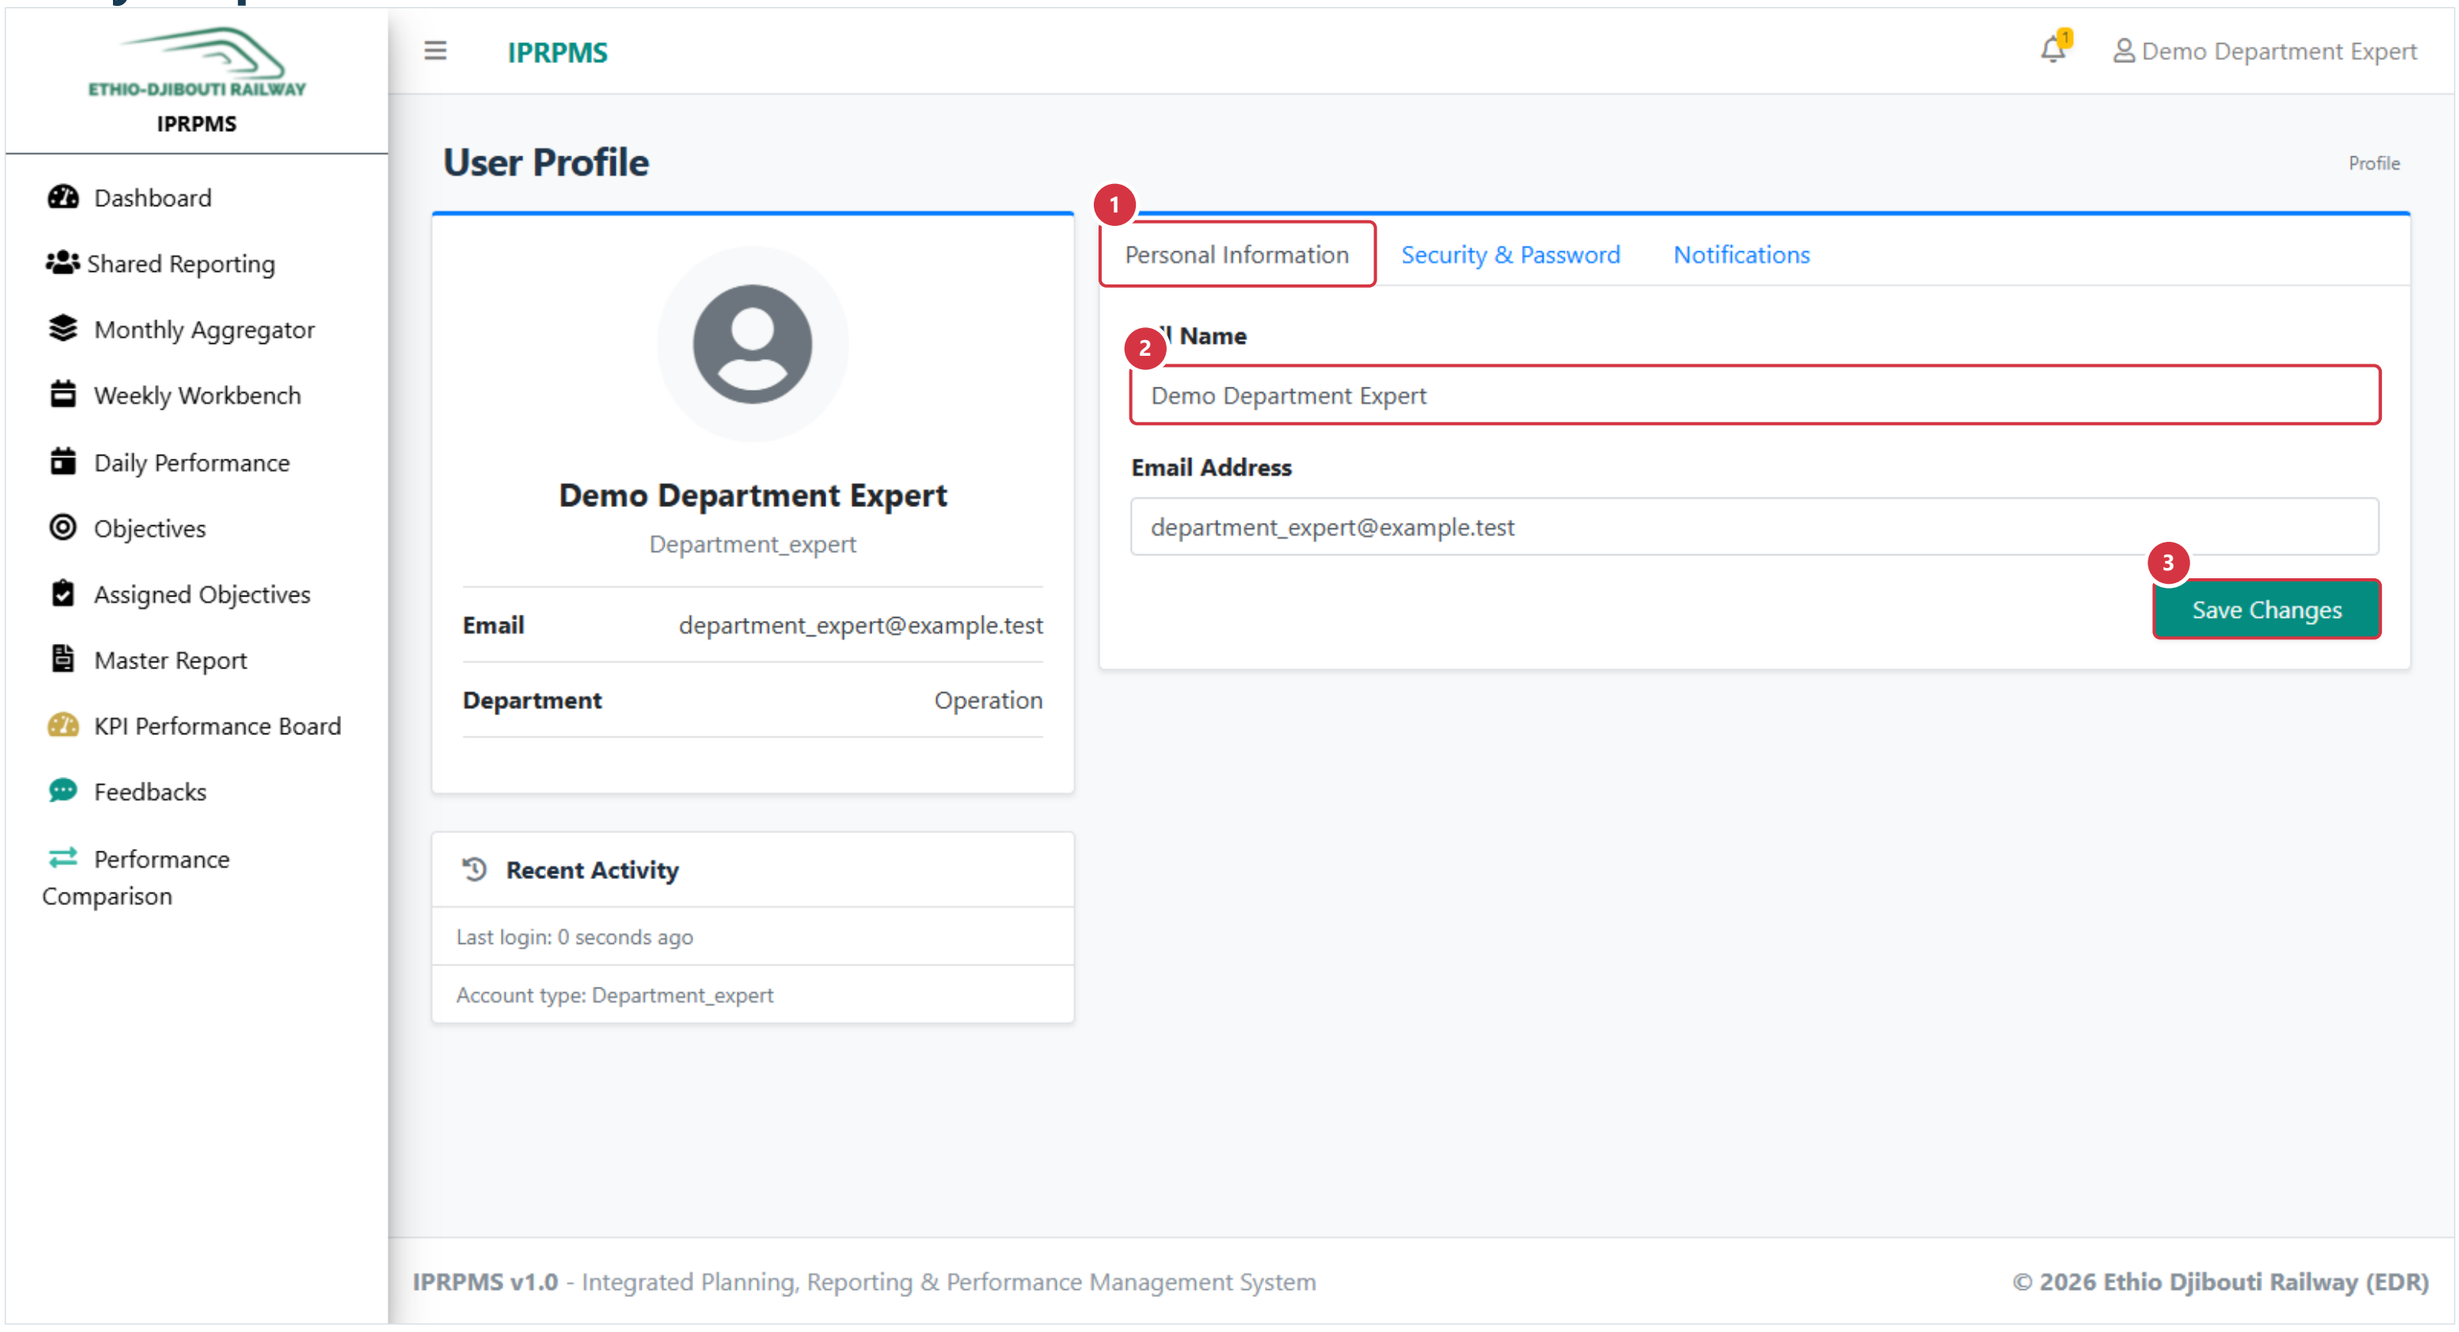

Replace a temporary password

1. Enter the current temporary password.
2. Enter a new private password and repeat it in Confirm new password.
3. Click Change Password and Continue.

After this step: This screen appears when the administrator requires a first password change.

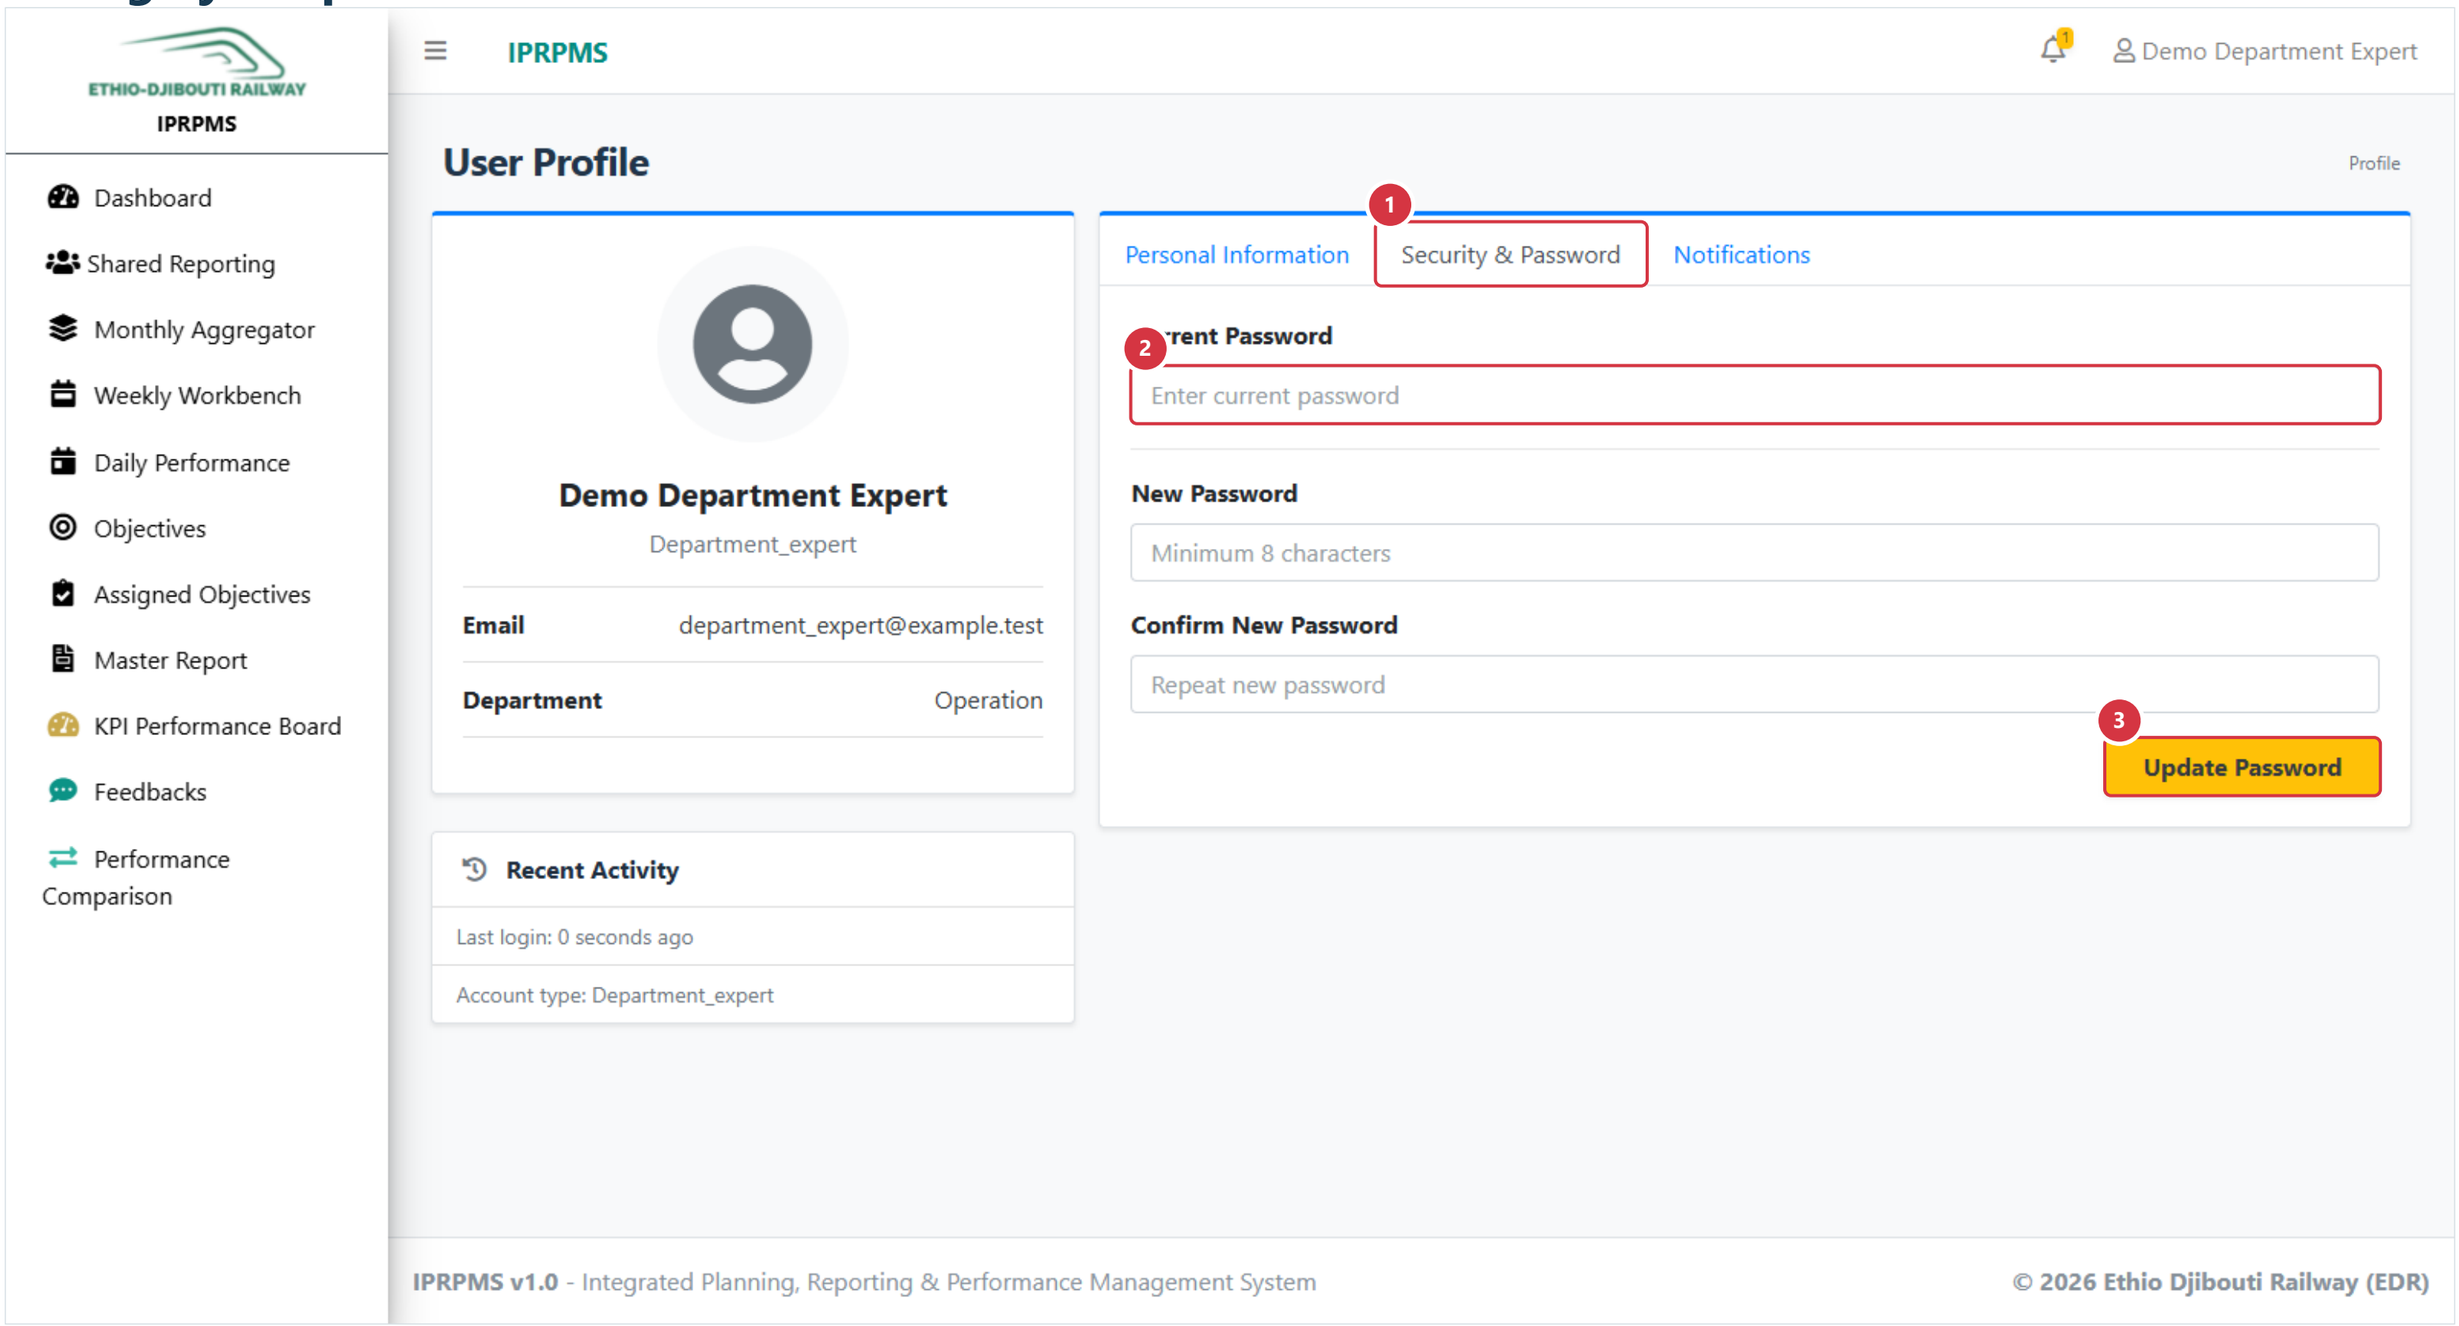

Edit your personal information

1. Click Personal Information in Profile.
2. Update Full Name or Email Address.
3. Click Save Changes and confirm the success message.

After this step: Department and role assignments are managed by the administrator, not through this form.

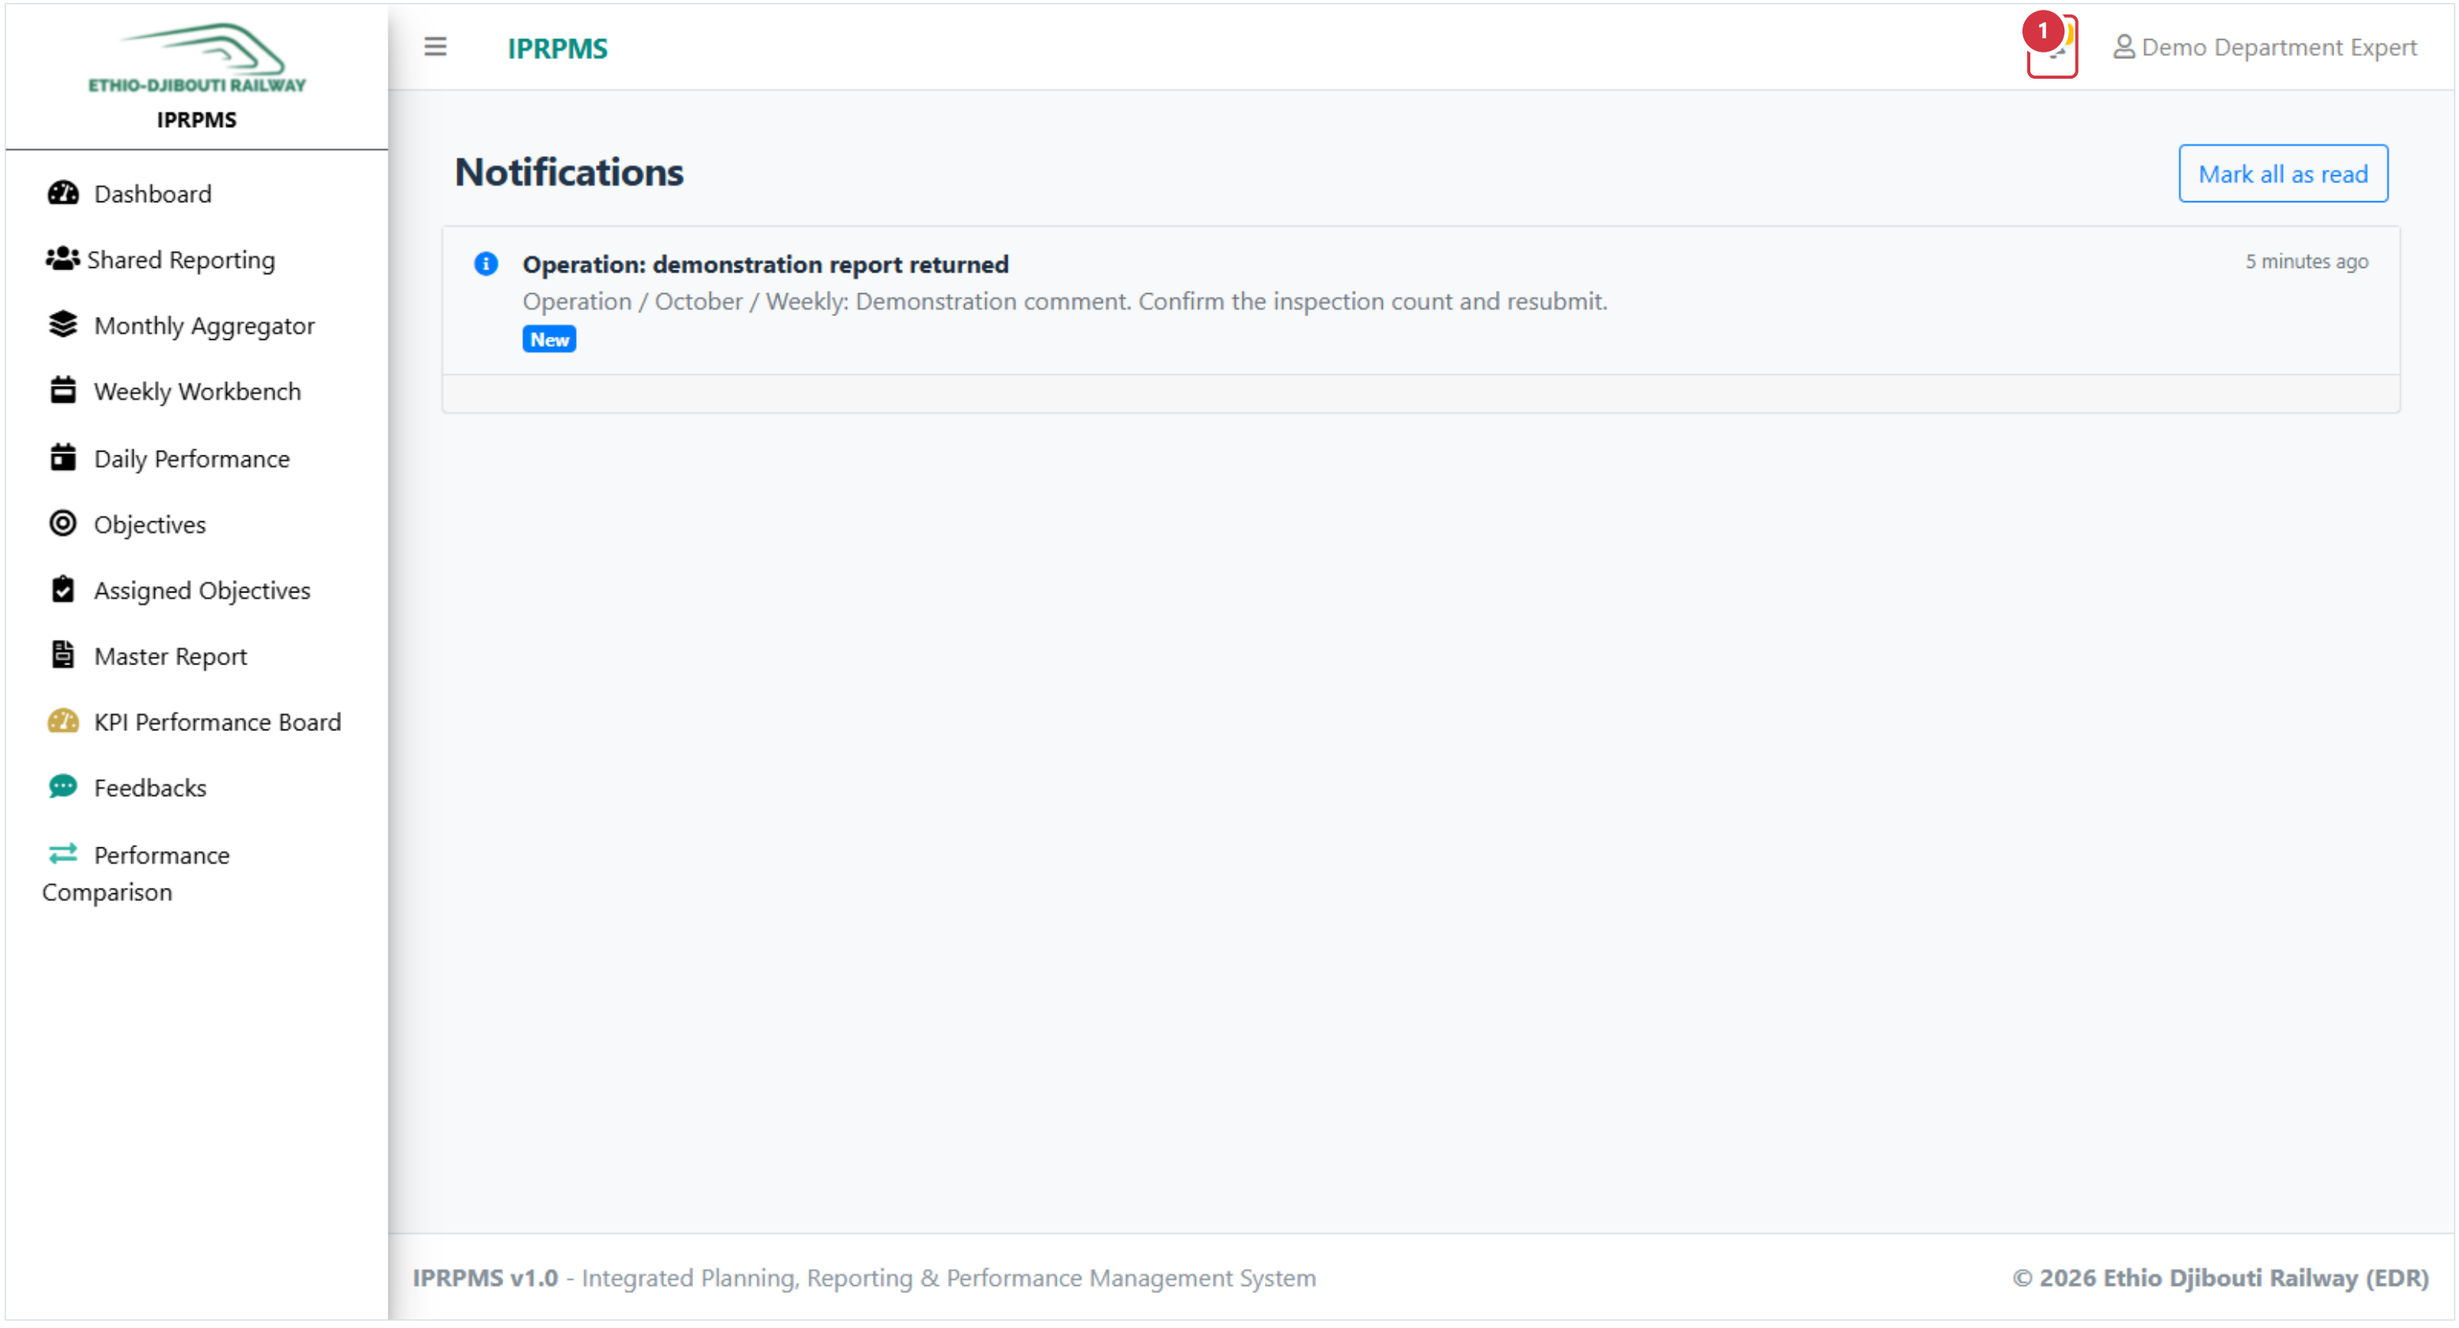

Change your password

1. Click Security & Password.
2. Enter your current password, a new password and its confirmation.
3. Click Update Password.

After this step: Use a private password. The fields are deliberately empty in this training capture.

Read workflow notifications

1. Open the notification bell or Notifications page.
2. Read the department, period, action and review comment.
3. Open the linked record or mark the notice read after acting on it.

After this step: Marking a notification read does not approve, correct or submit the underlying record.

Maintain departments and their reporting defaults

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Departments connect users, objectives and performance ownership. Incorrect codes or hierarchy can misroute work.

Before you click

Use the approved organization structure. Check for an existing department before creating another.

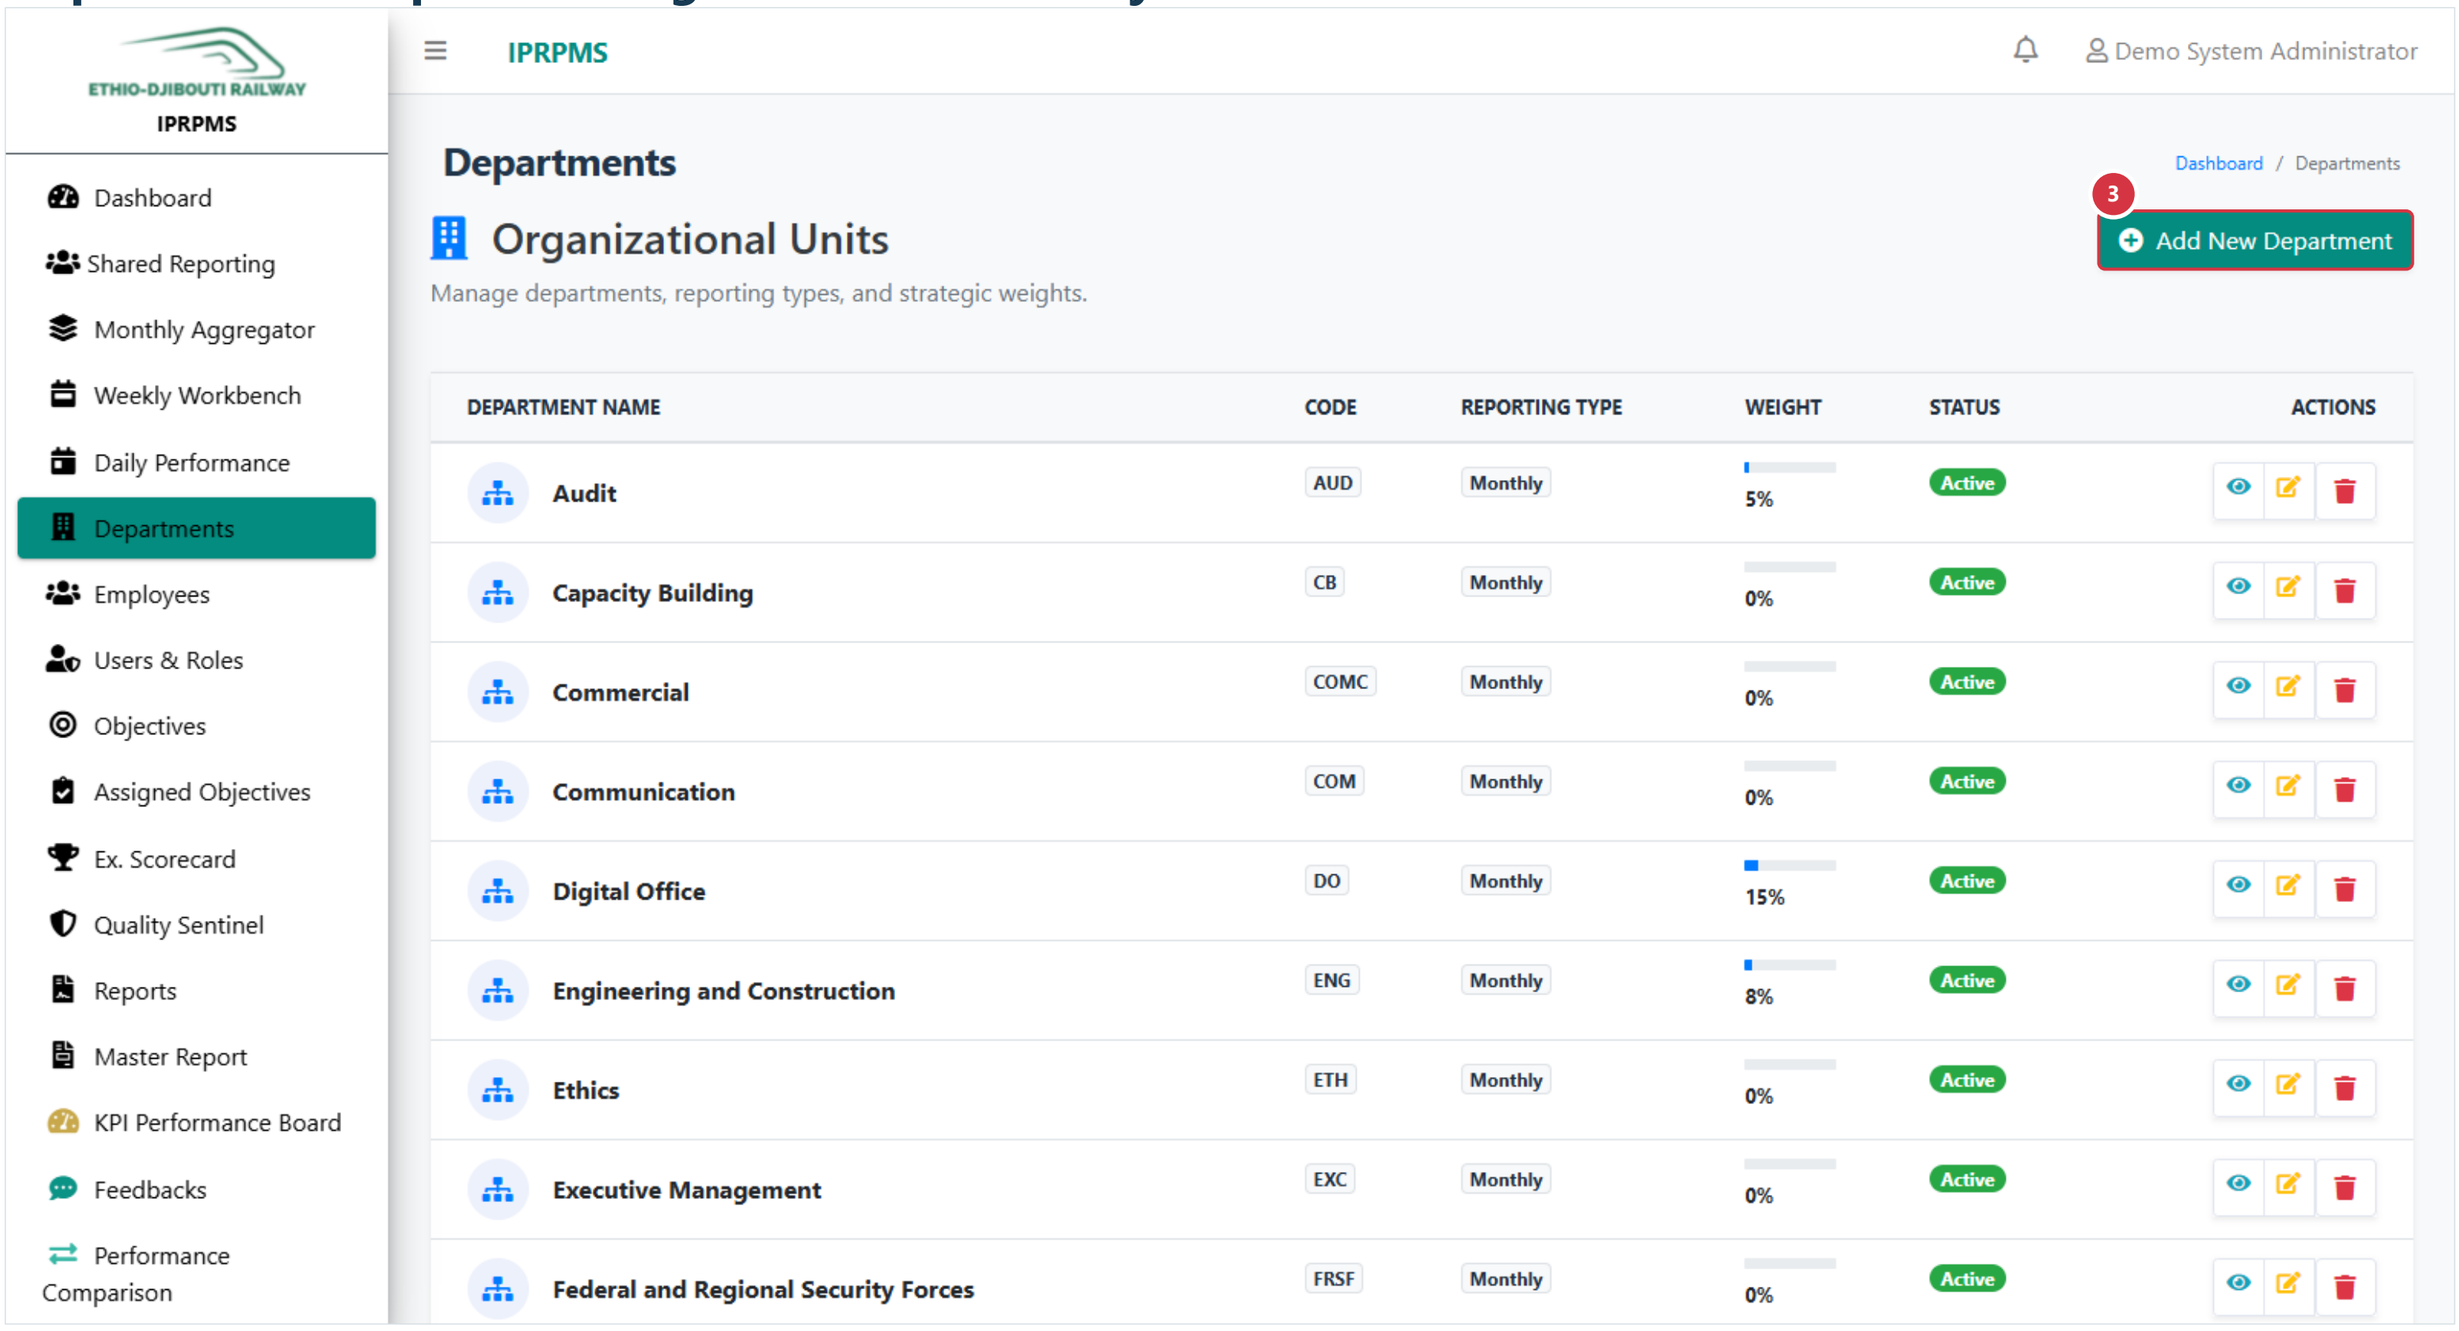

What to check

Check name, unique code, hierarchy, reporting default and active state. An activity can override its department's default reporting frequency.

How you know it worked

Save Department and verify the record. Deactivate only under the approved operational policy, not simply because you cannot find a current objective.

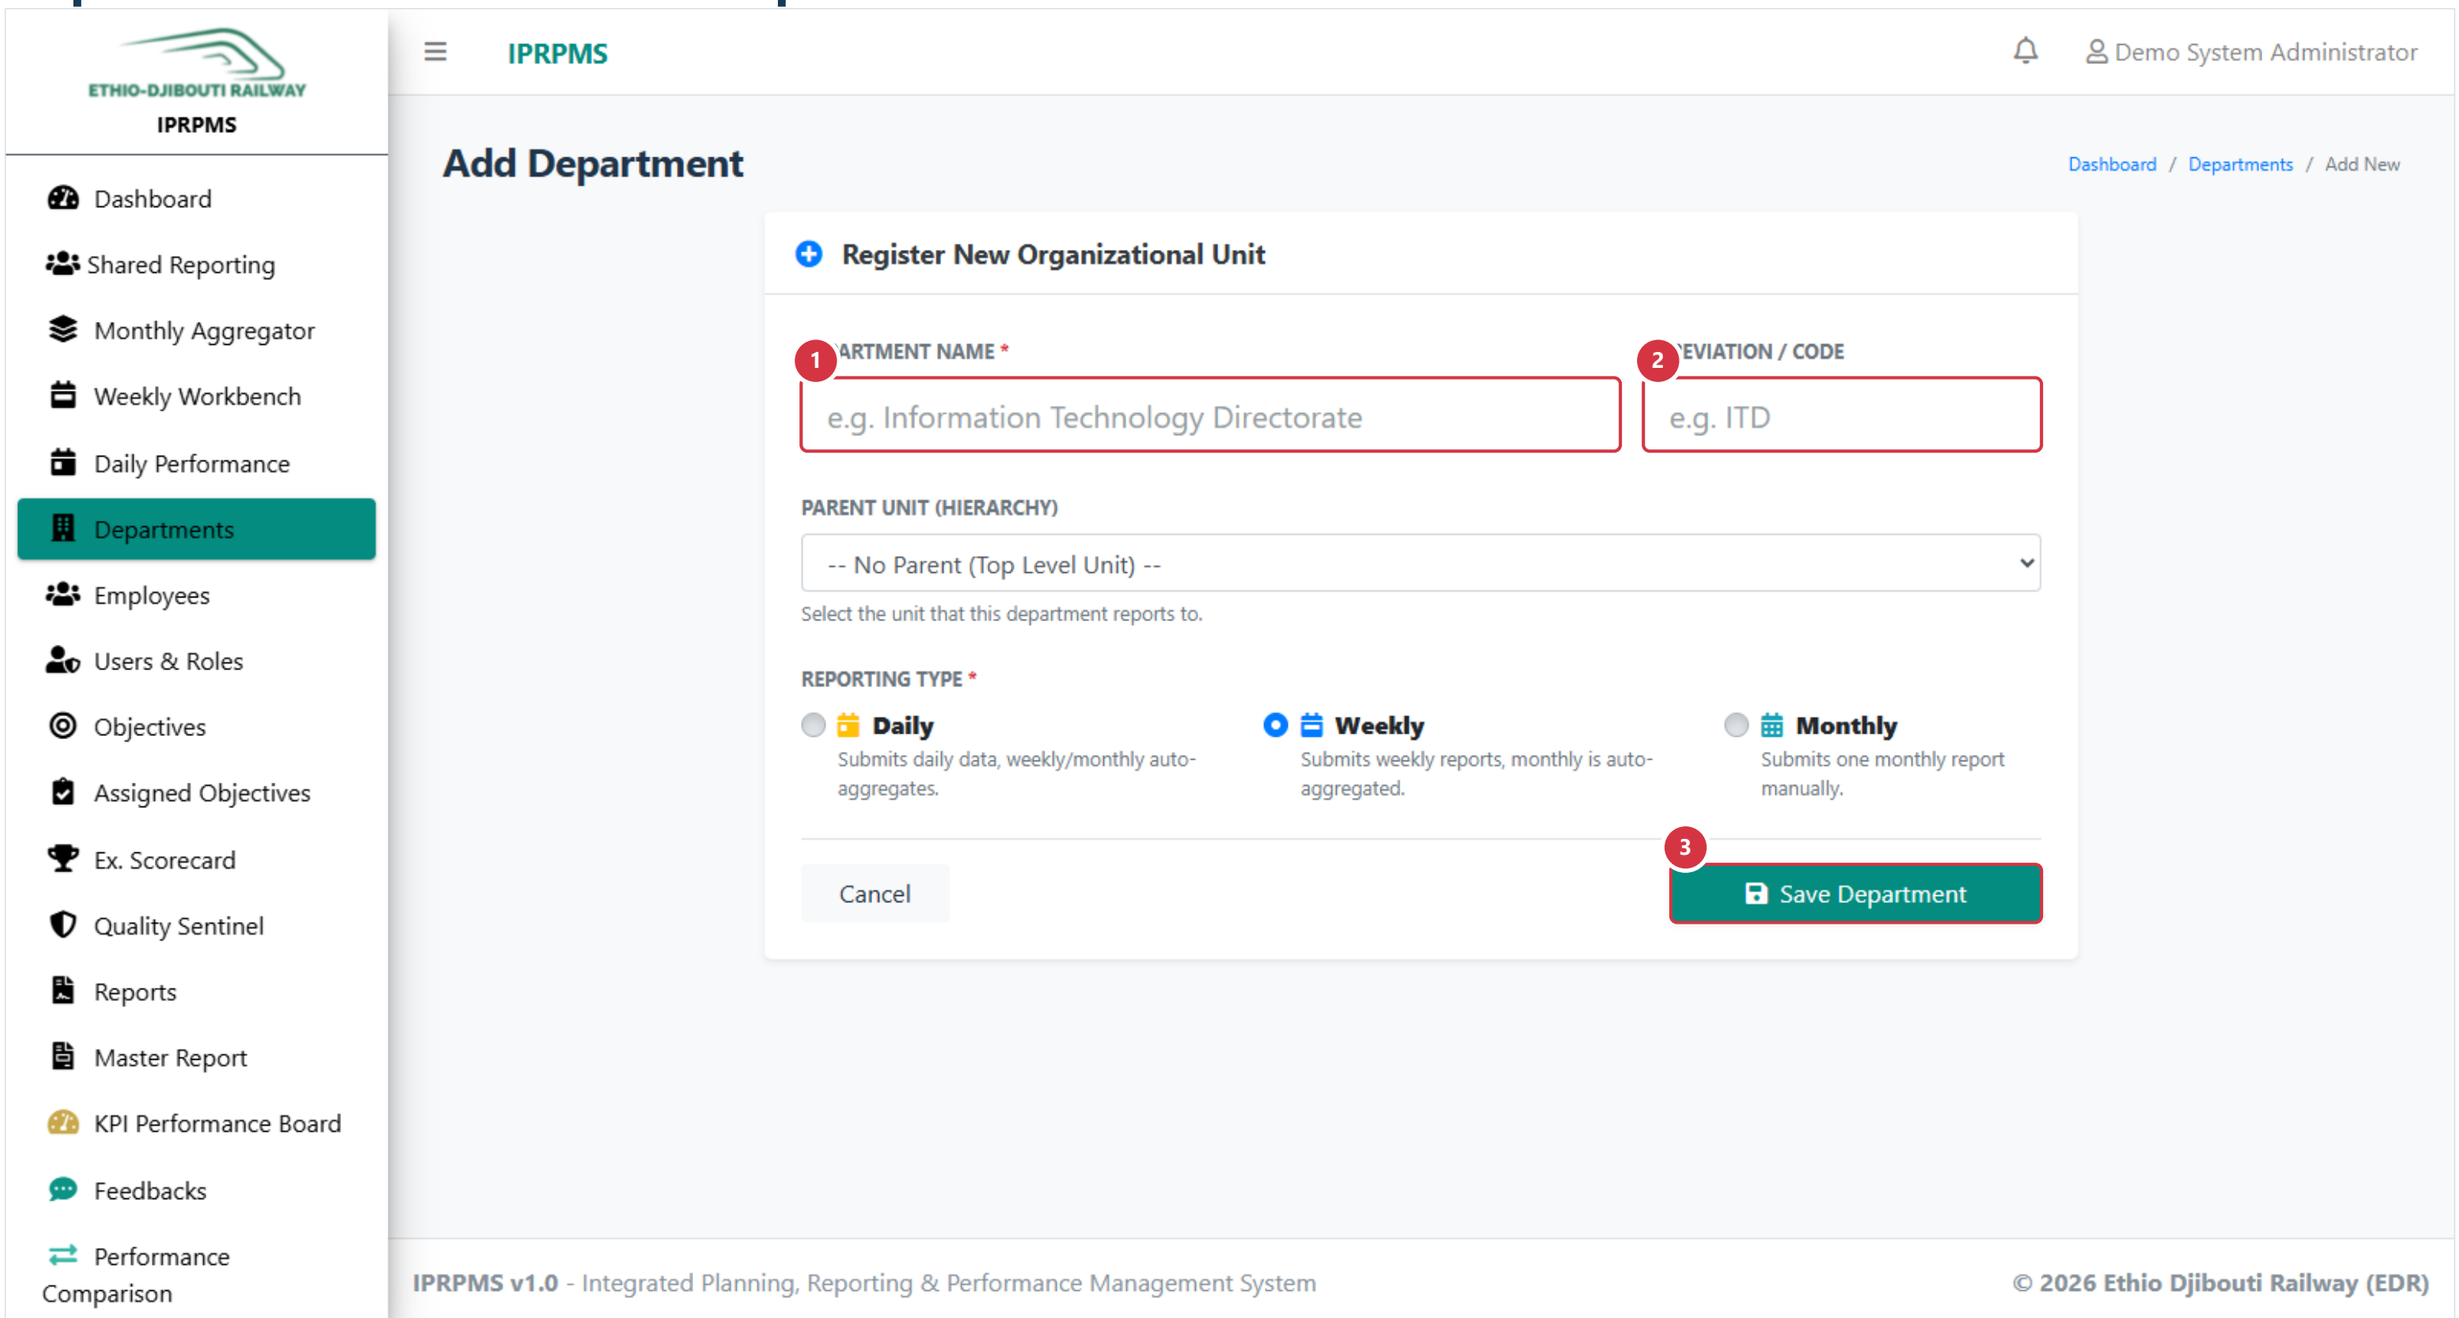

Departments: inspect the organization hierarchy

1. Open Departments.
2. Review name, code, reporting type and active status.
3. Use the create/edit controls for authorized structural changes.

After this step: Department links and active status determine account and reporting scope.

Departments: create or edit a department

1. Enter the department name.
2. Enter its unique code and choose the parent/reporting settings offered.
3. Set Active as appropriate and click Save Department.

After this step: Choose the correct existing department for user accounts. Creating a department is a separate administration task.

Create, activate and correct user-role assignments

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

An account needs the right department, role and active state. Email naming alone does not assign a role.

Before you click

Confirm the person's identity, official email, approved department and responsibility. Search for an existing account before creating another.

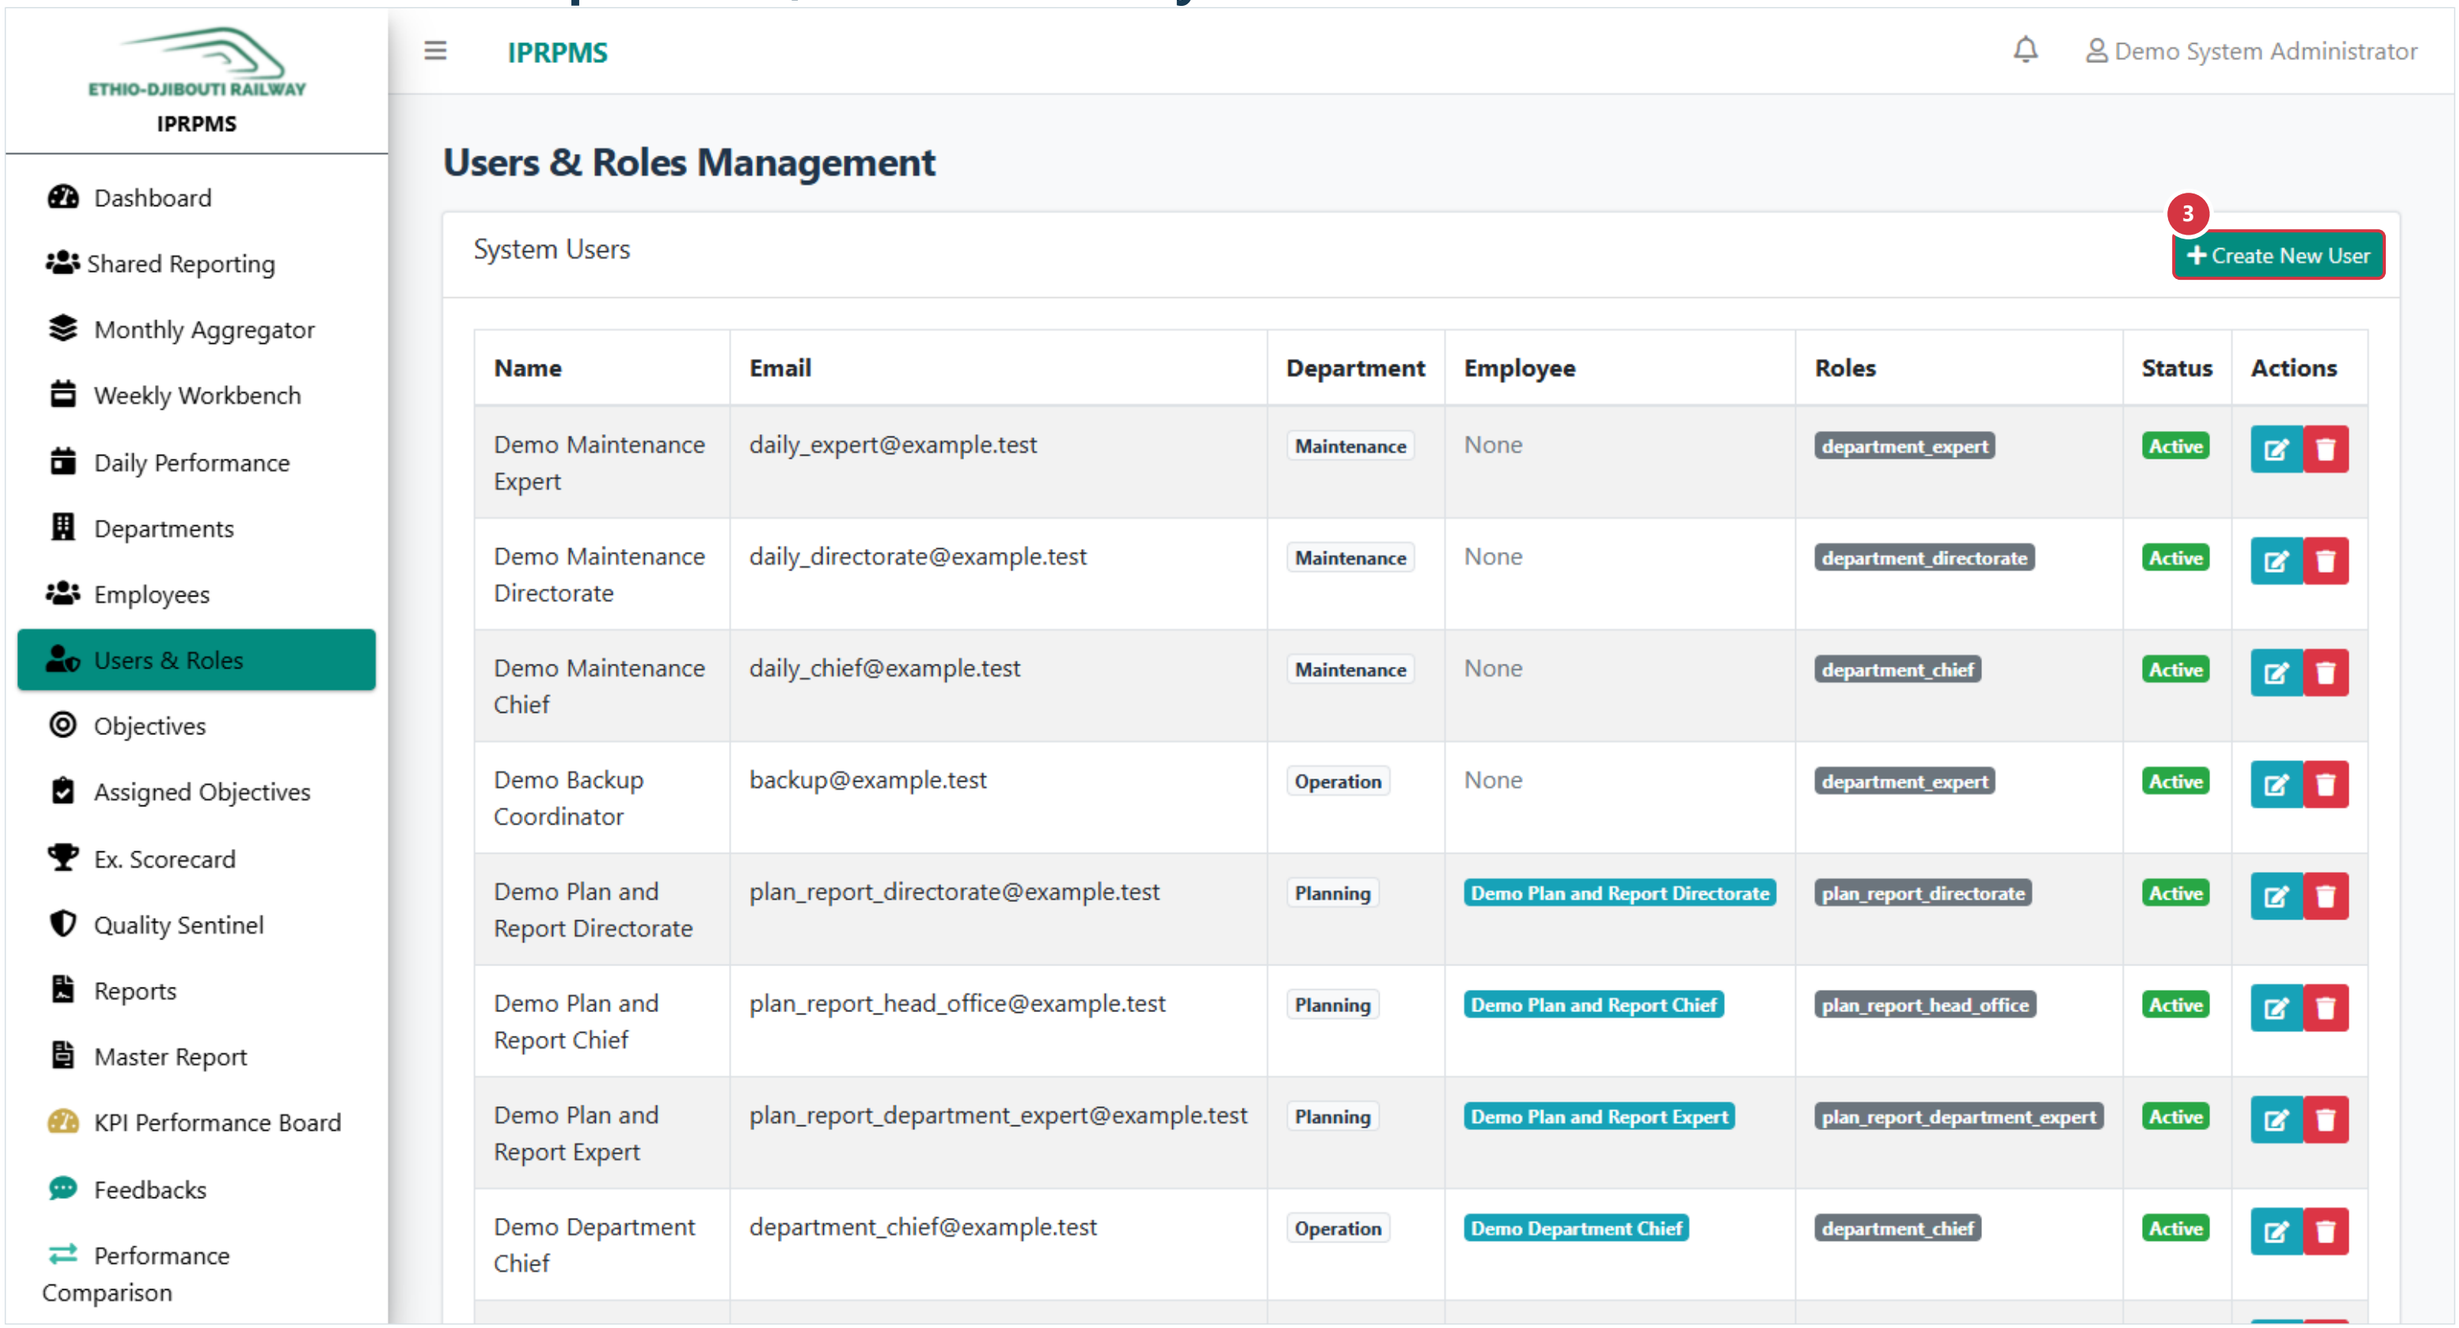

What to check

Use the minimum required role. Check role badges after saving. Leave optional password fields blank when preserving an existing password; do not overwrite it just to repair roles.

How you know it worked

The correct account can sign in and see its intended scope. Coordinator and backup are assigned separately by the Department Chief, not by adding a new role badge.

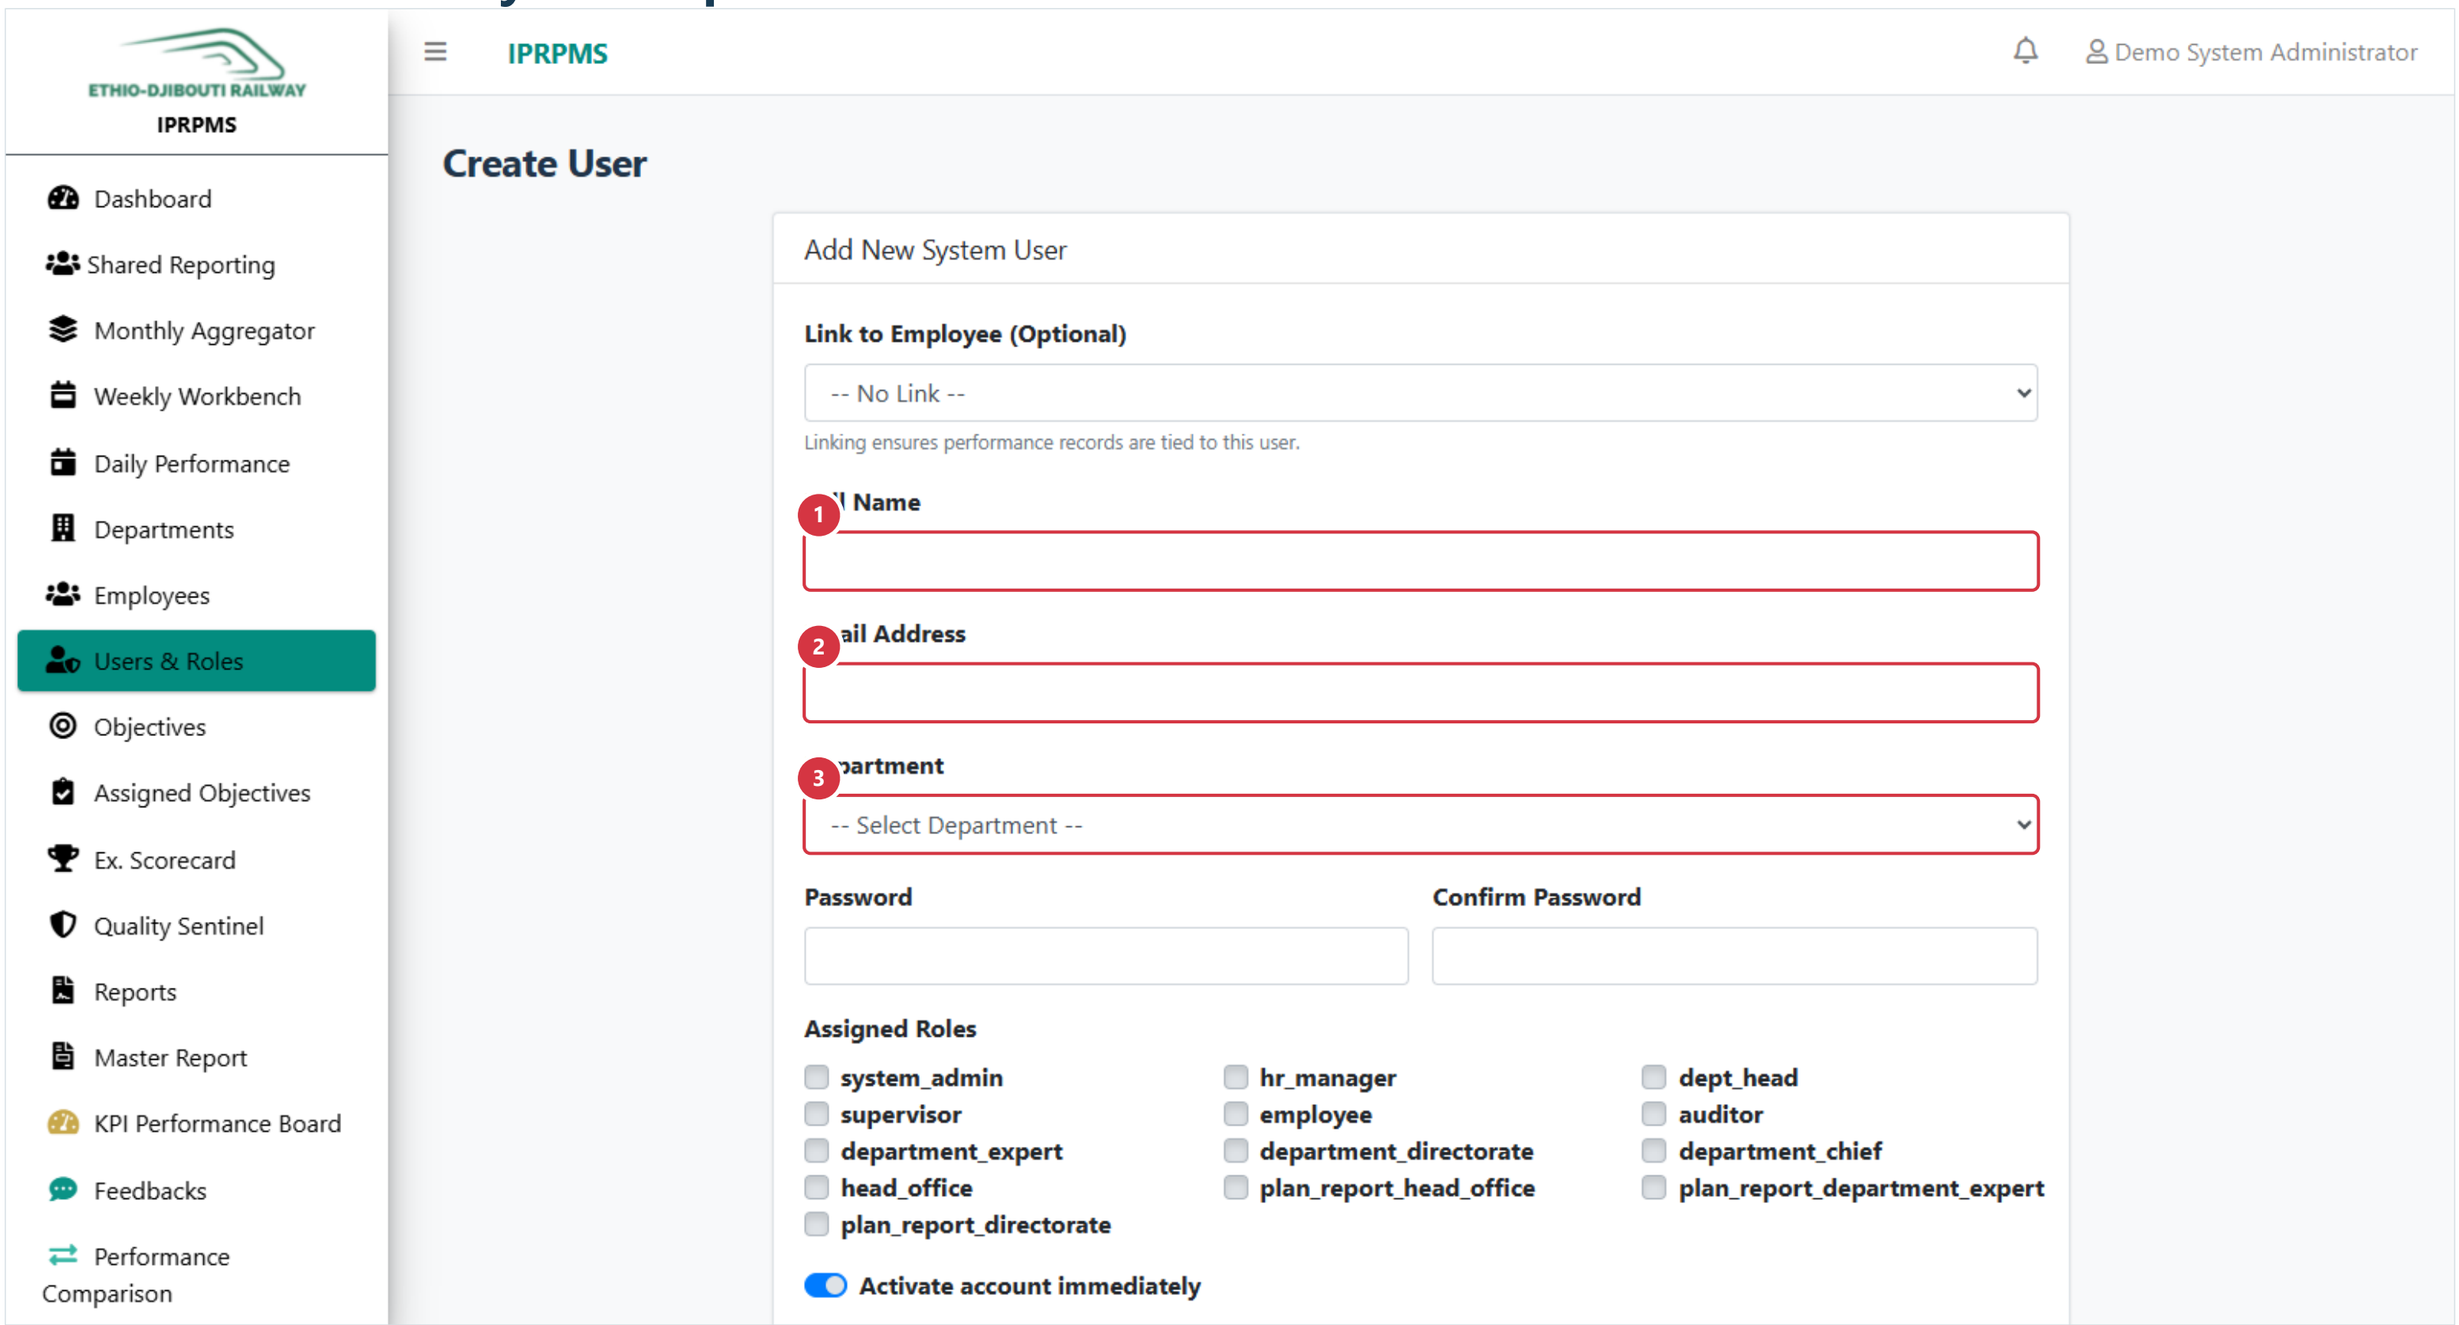

Users & Roles: check department, role and activity

1. Open Users & Roles.
2. Find the user and inspect department, employee link, role badges and active status.
3. Open the edit action to correct the specific account.

After this step: A role badge identifies the permission group. Coordinator/backup duties are assigned separately in the reporting team.

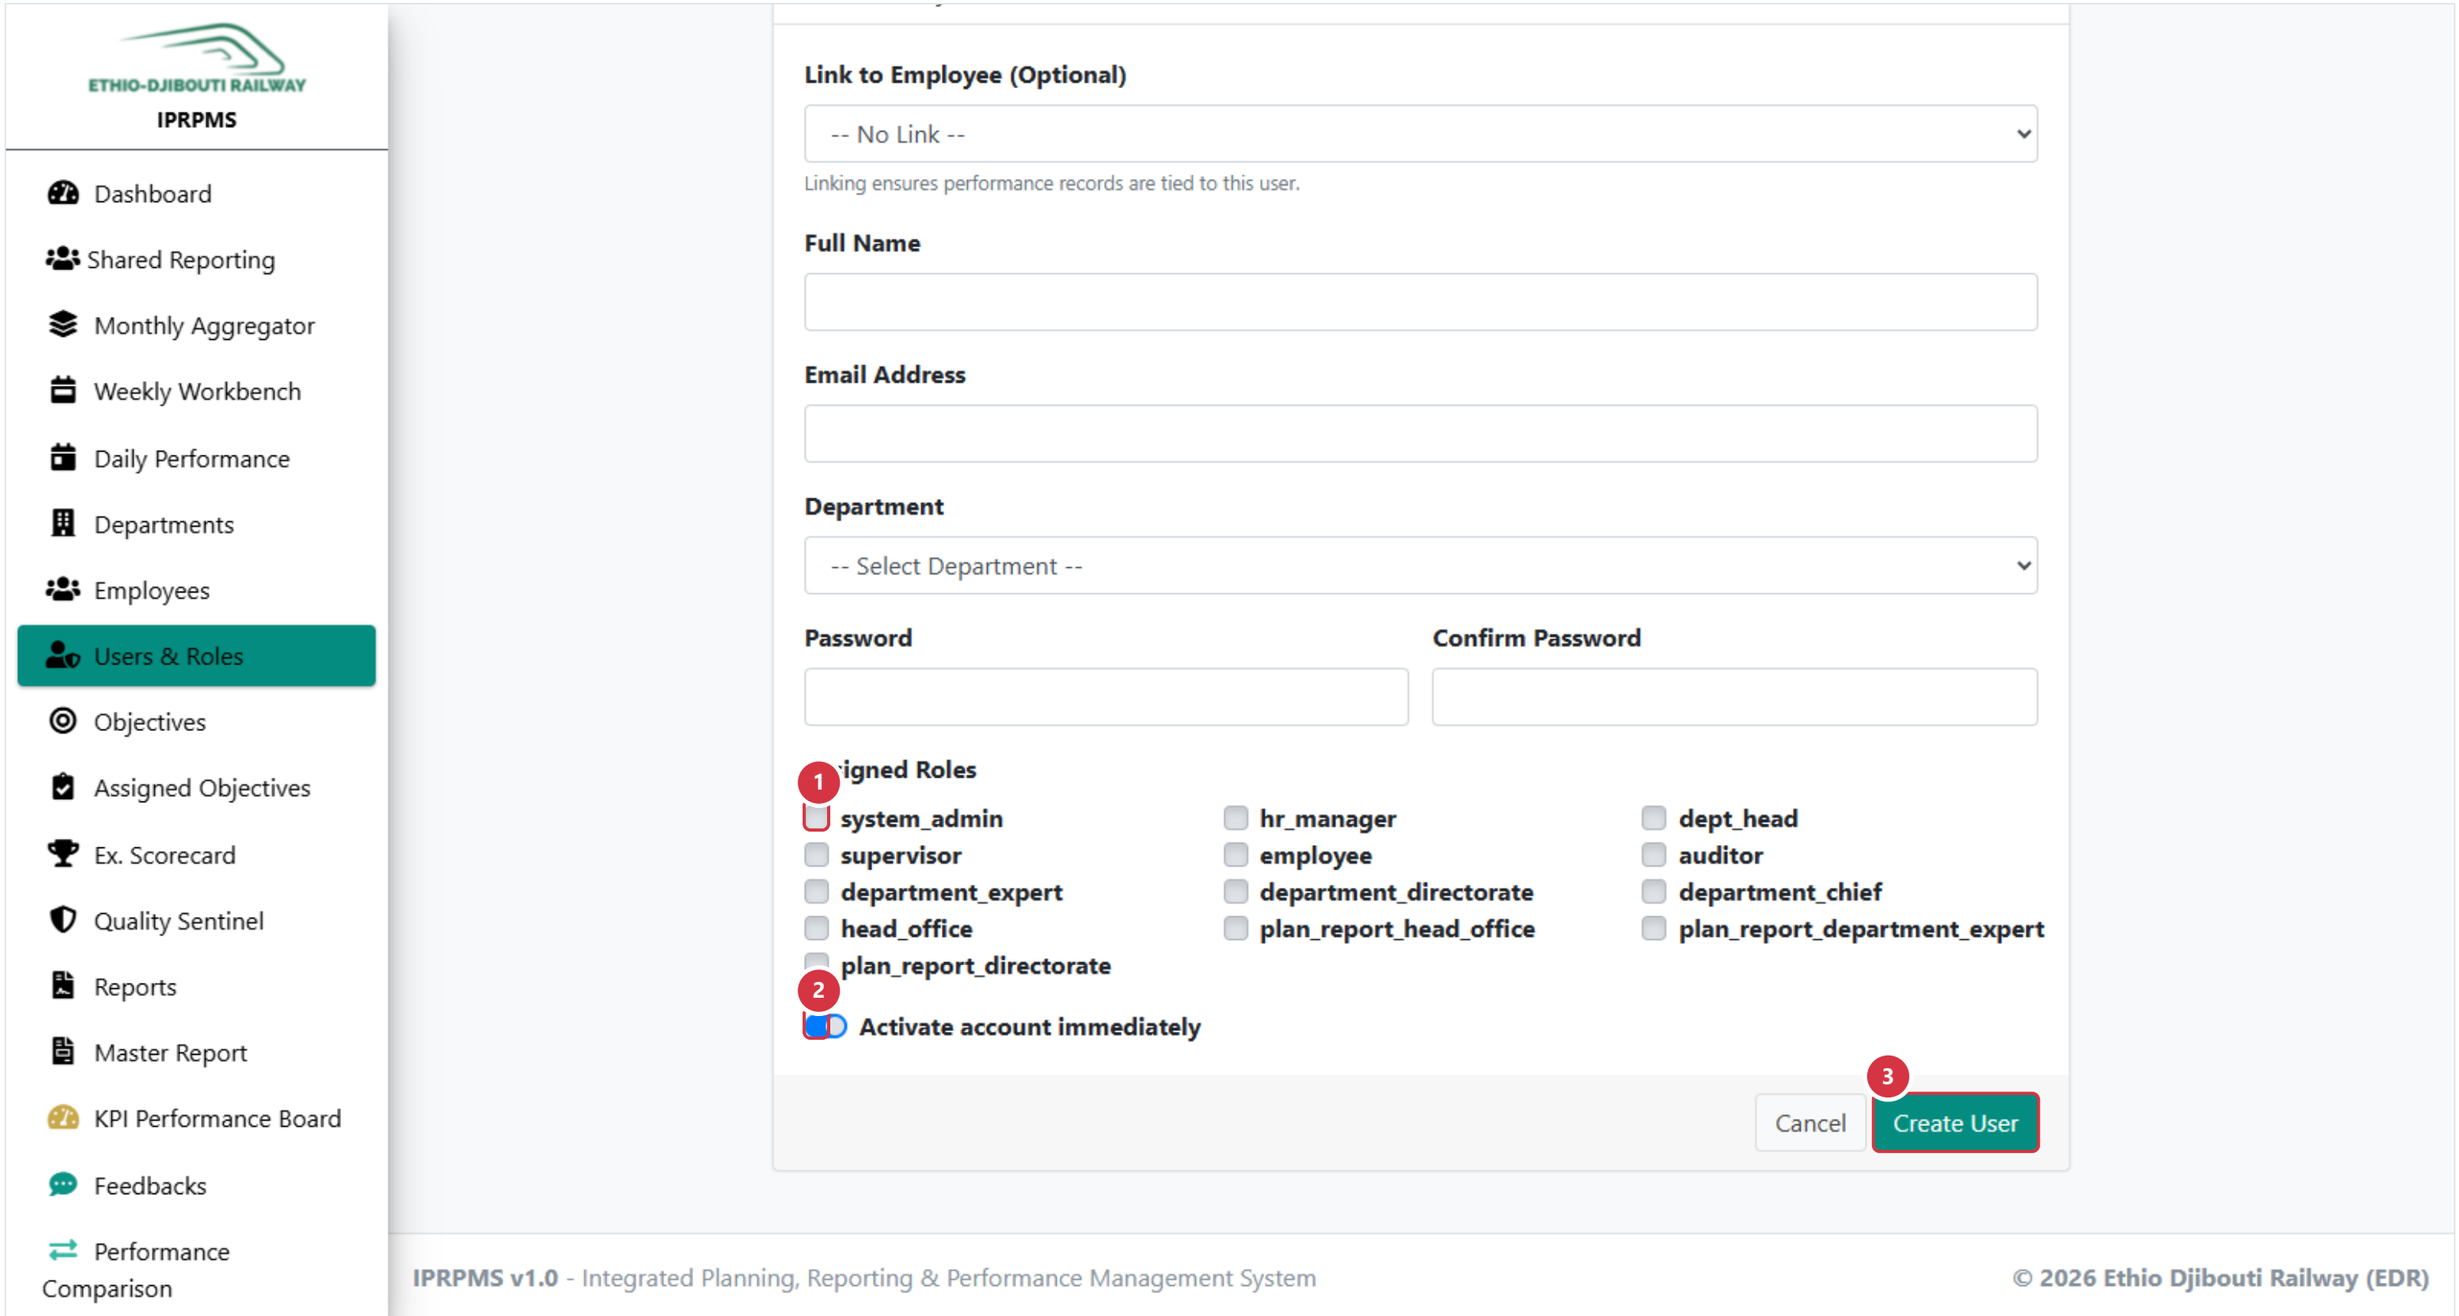

Create a user: identity and department

1. Enter the user full name.
2. Enter the official email address.
3. Select the correct department and employee link, then continue to password and role fields.

After this step: No real password is displayed in this handbook. Use each user own account.

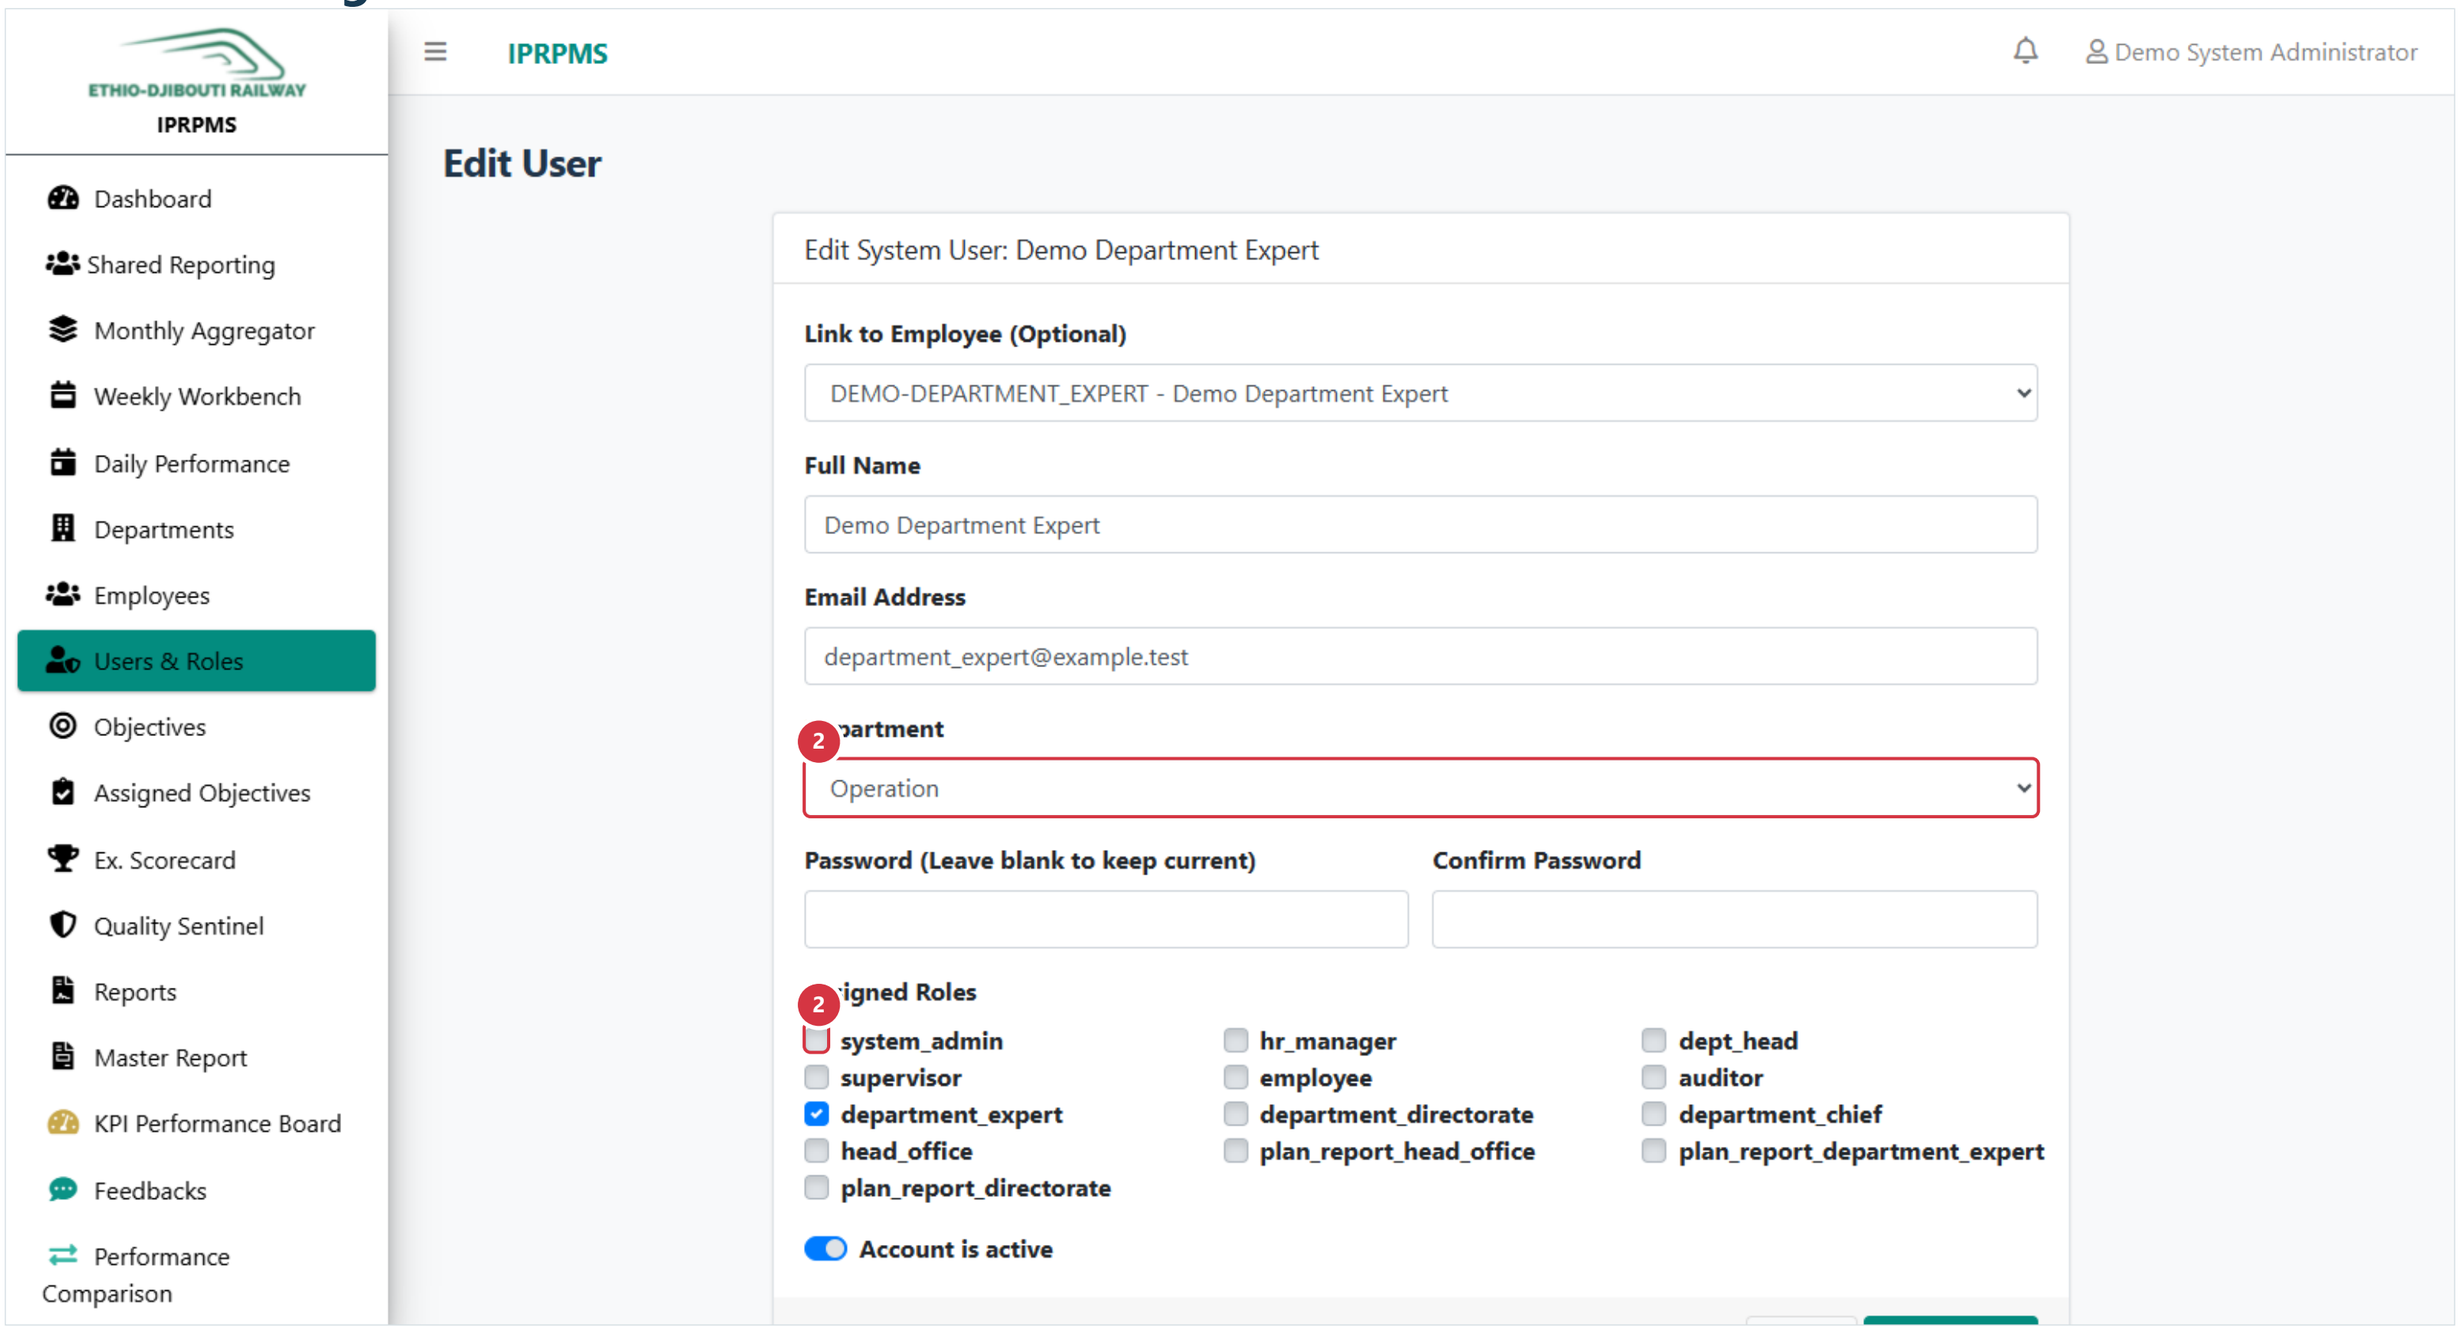

Create a user: roles and active status

1. Choose the required role(s).
2. Confirm the active/approval setting shown on the form.
3. Click Create User, then verify the saved account role badges.

After this step: Use the user edit form to change roles, department or password. Leaving an optional password field blank preserves the existing password where the form states this.

Edit an existing user account

1. Confirm the account name before changing anything.
2. Correct department, employee link, assigned roles or active status.
3. Save the user update and verify the list entry.

After this step: Changing a role does not automatically select the department reporting coordinator.

Employee records and account links

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Employee profiles and system accounts are related but are not the same record.

Before you click

Confirm employee identity, department, supervisor and employment details before linking or creating an account.

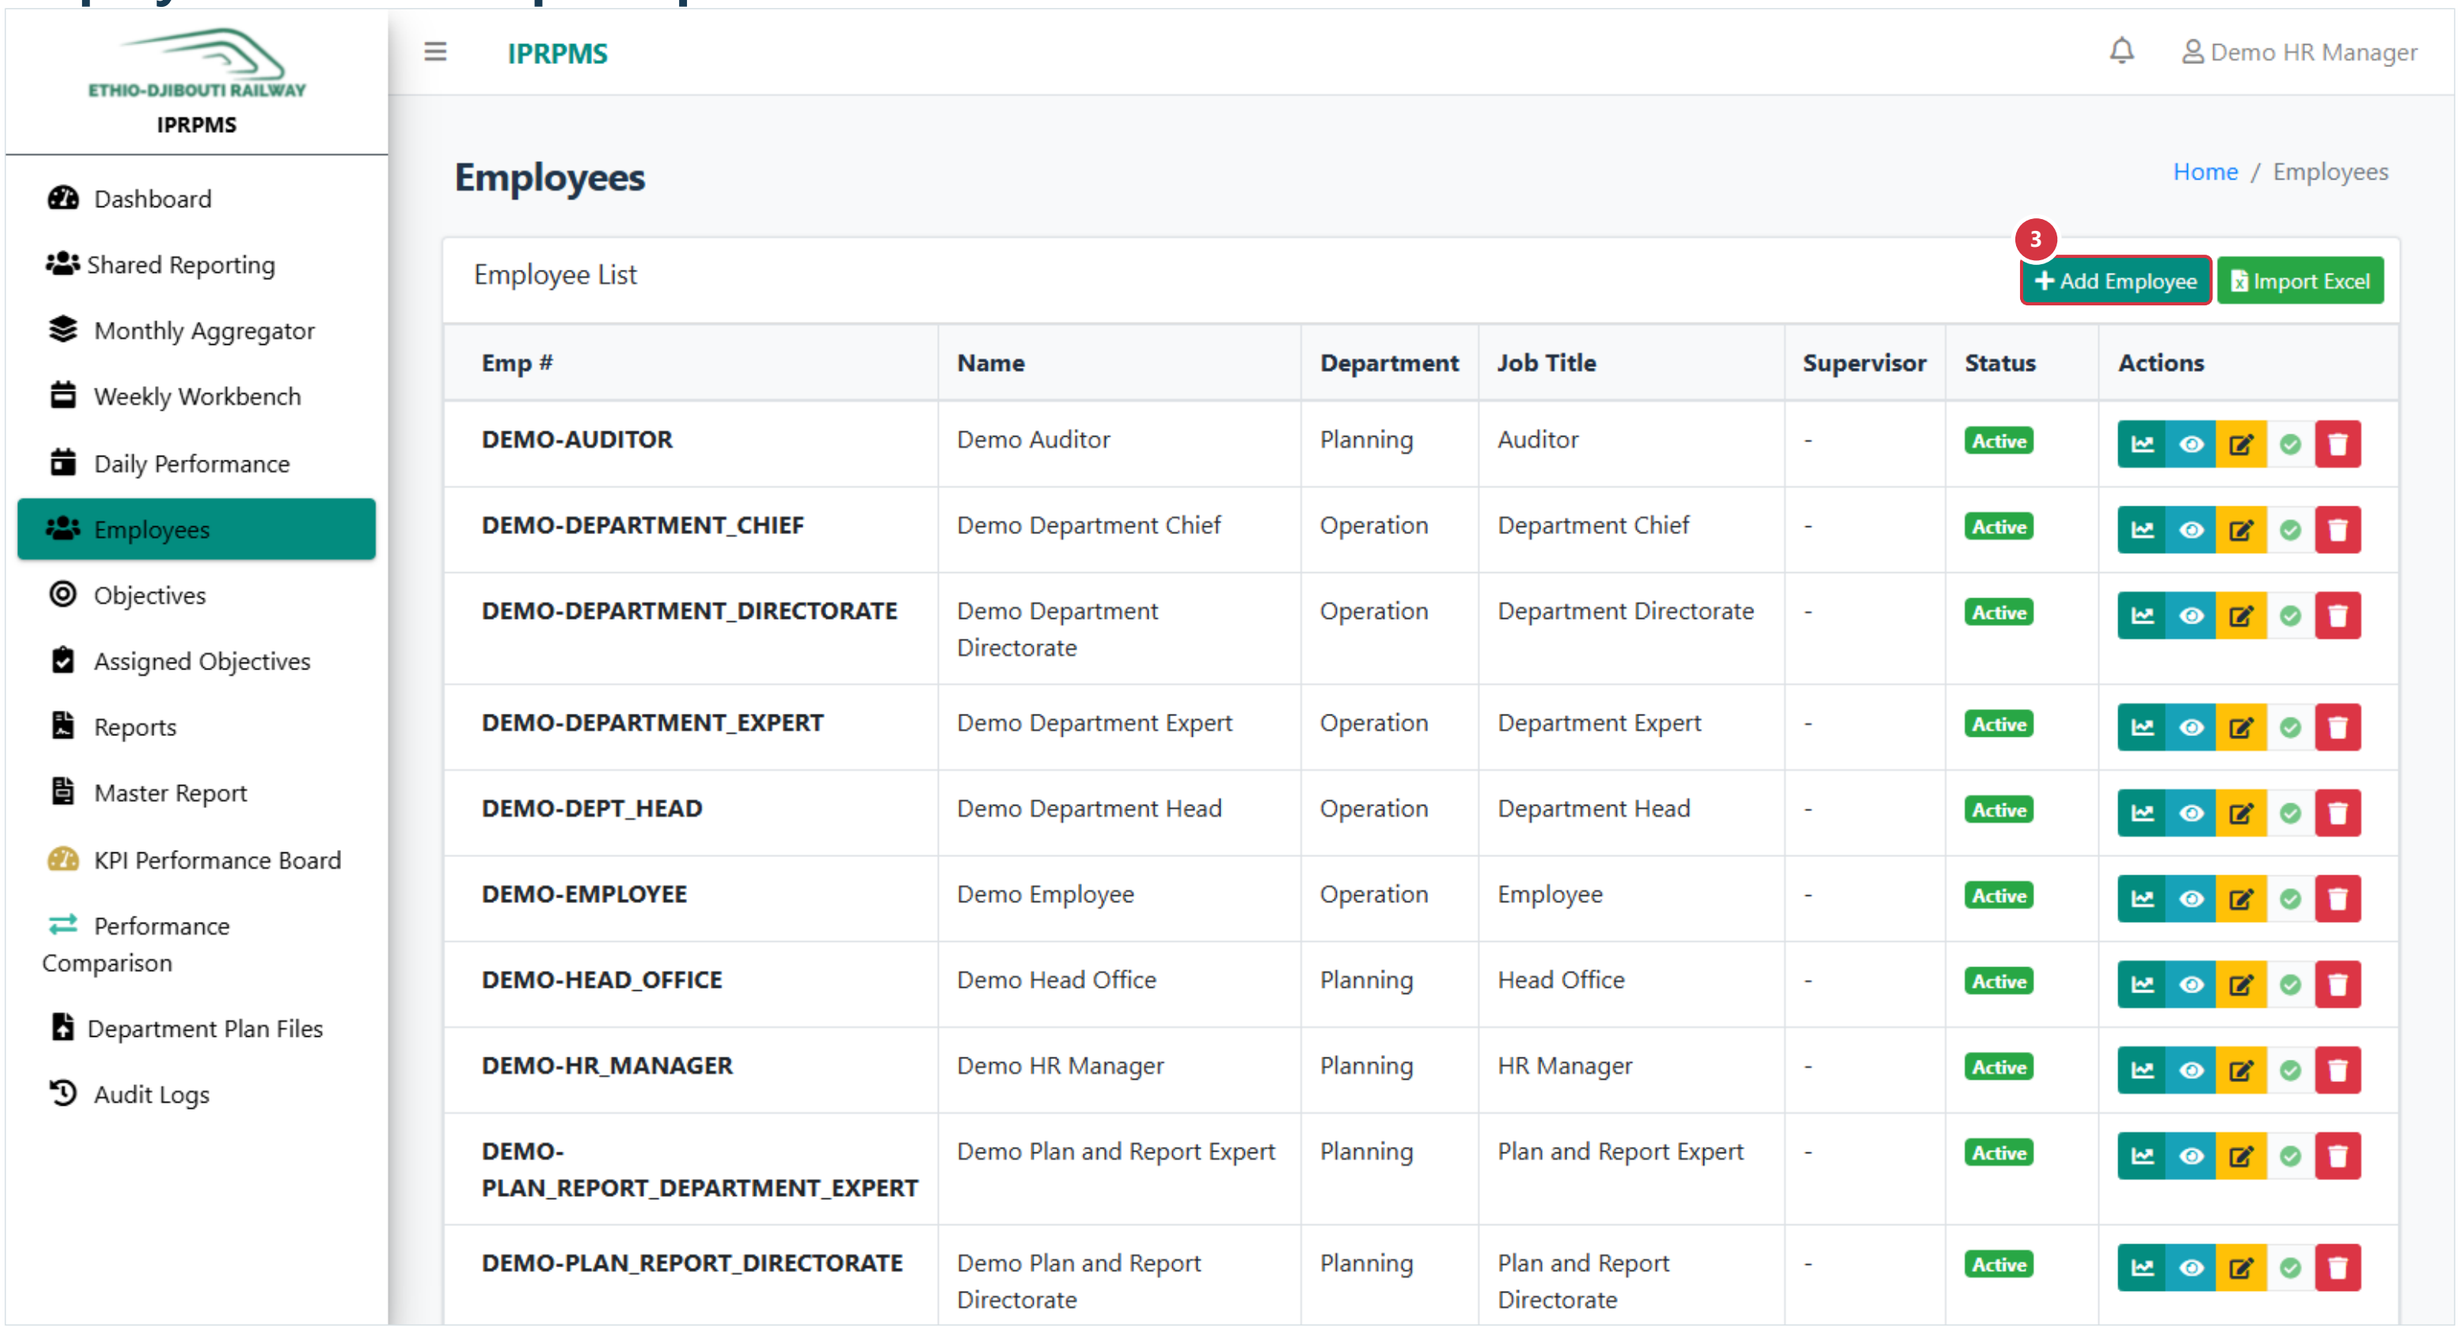

What to check

Use the supplied import template for personnel registers. Do not assume an active employee profile automatically grants a user role or activates login.

How you know it worked

Verify the employee and account link, then check department, role and account activity on Users & Roles.

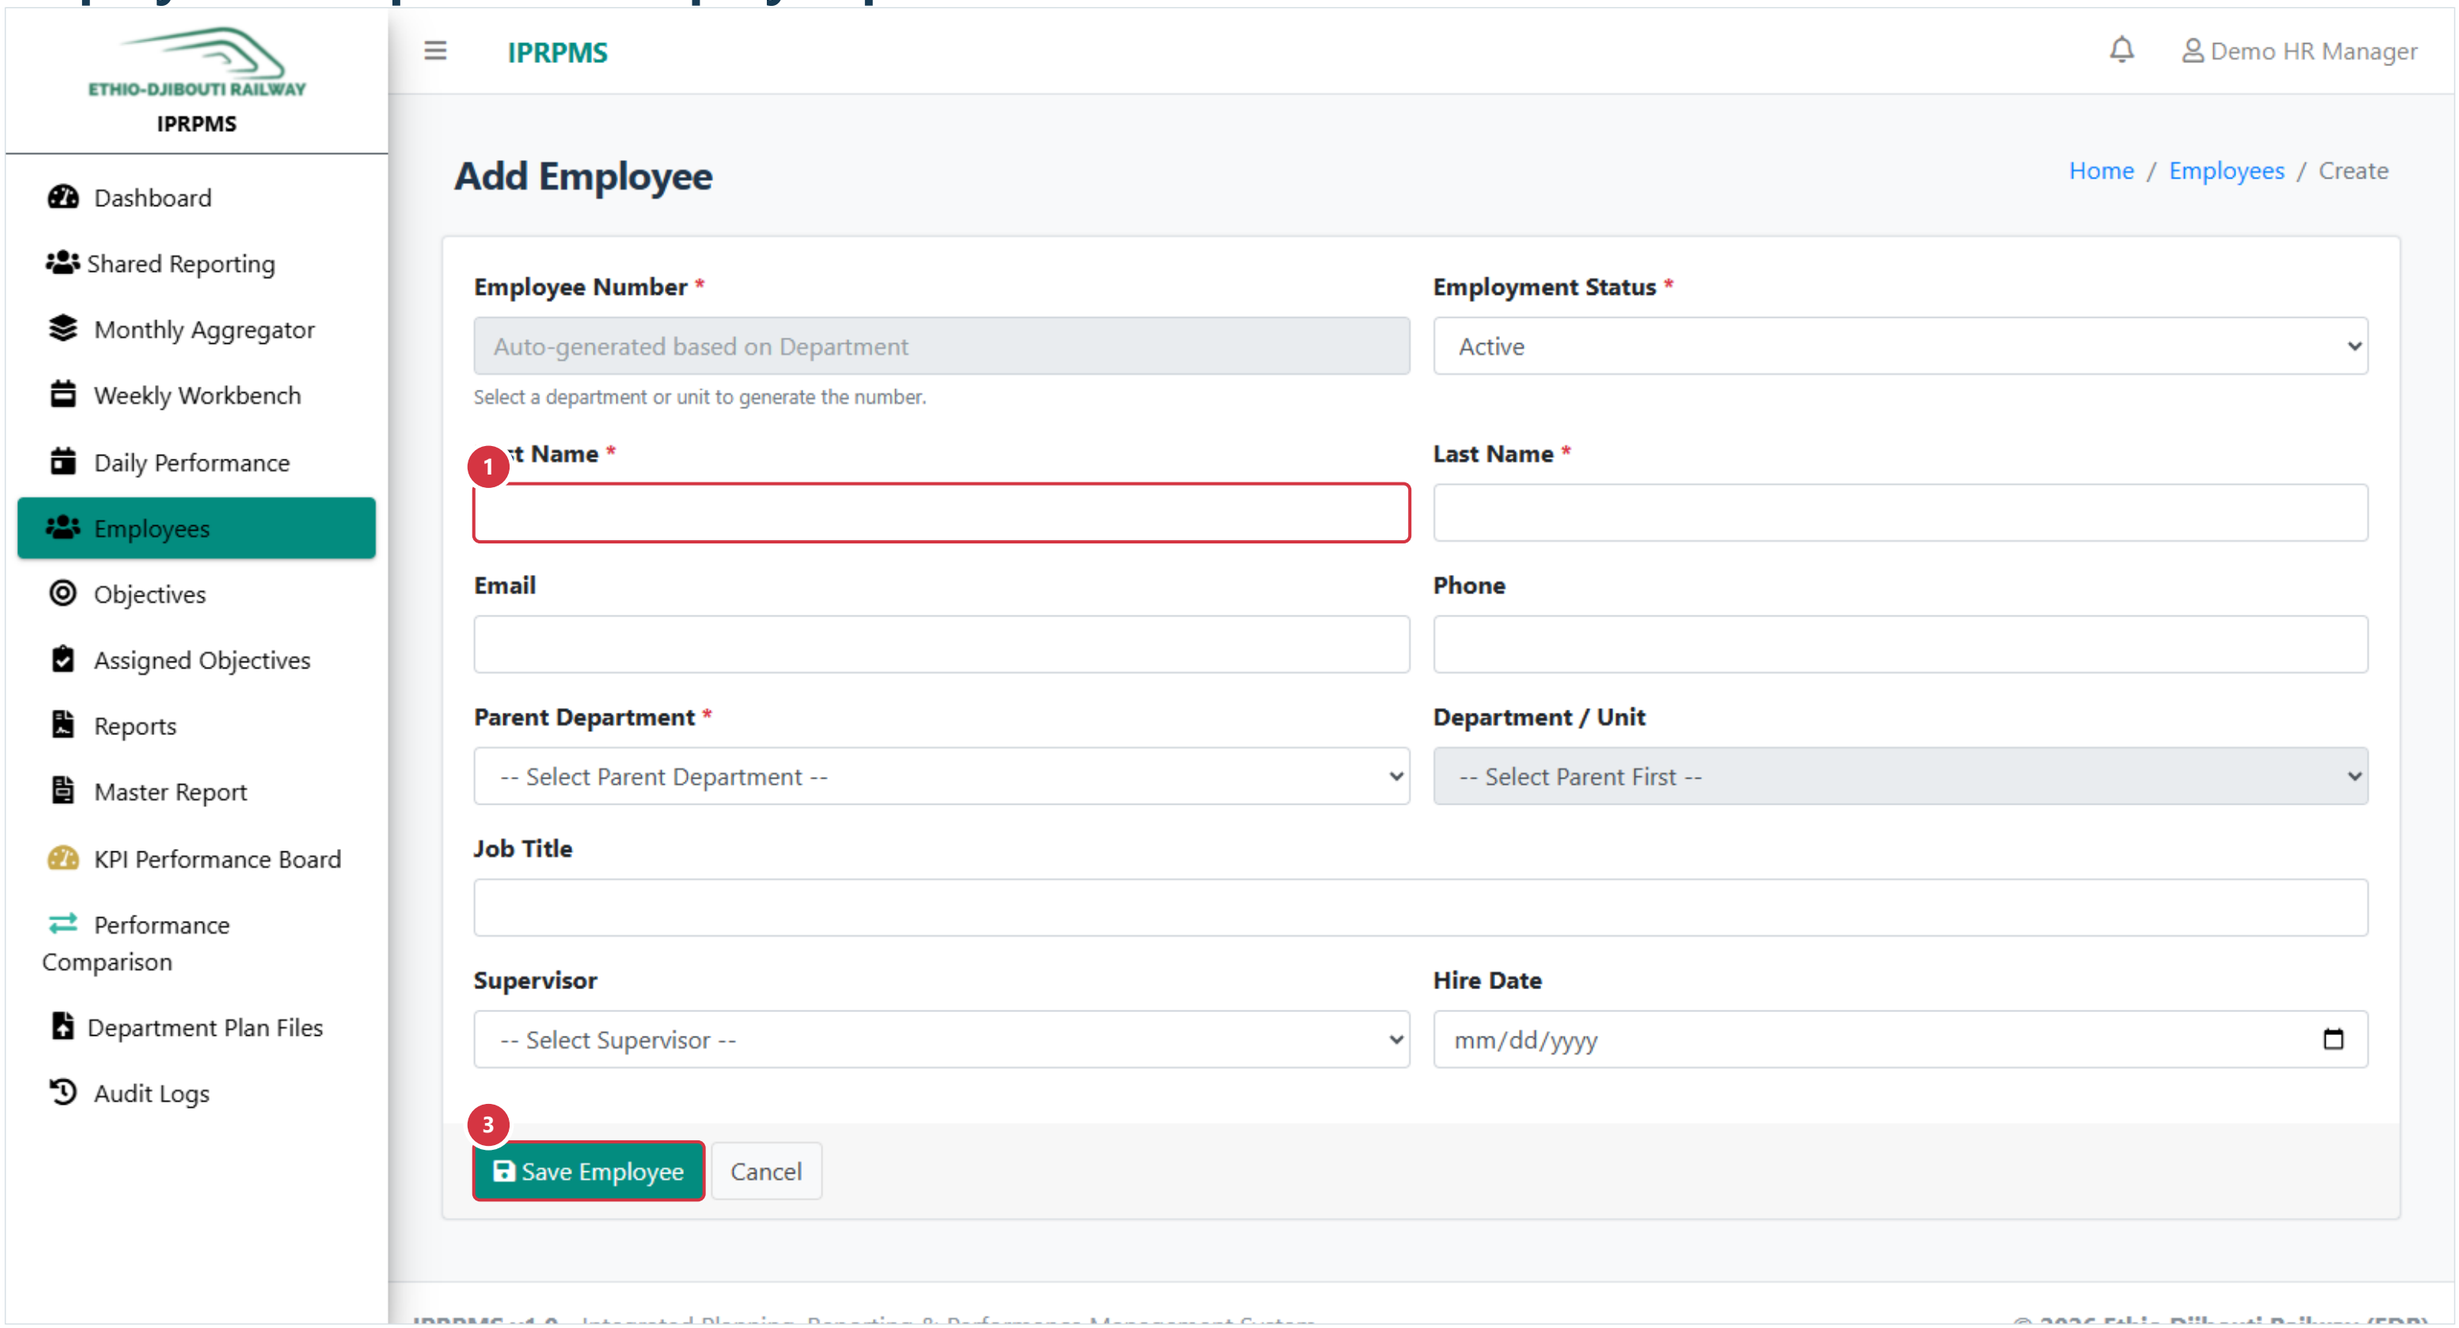

Employees: find and open a personnel record

1. Open Employees.
2. Use the search/list controls to find the record.
3. Create or edit an employee only within your authorized duties.

After this step: The screenshots contain demonstration employee names and addresses only.

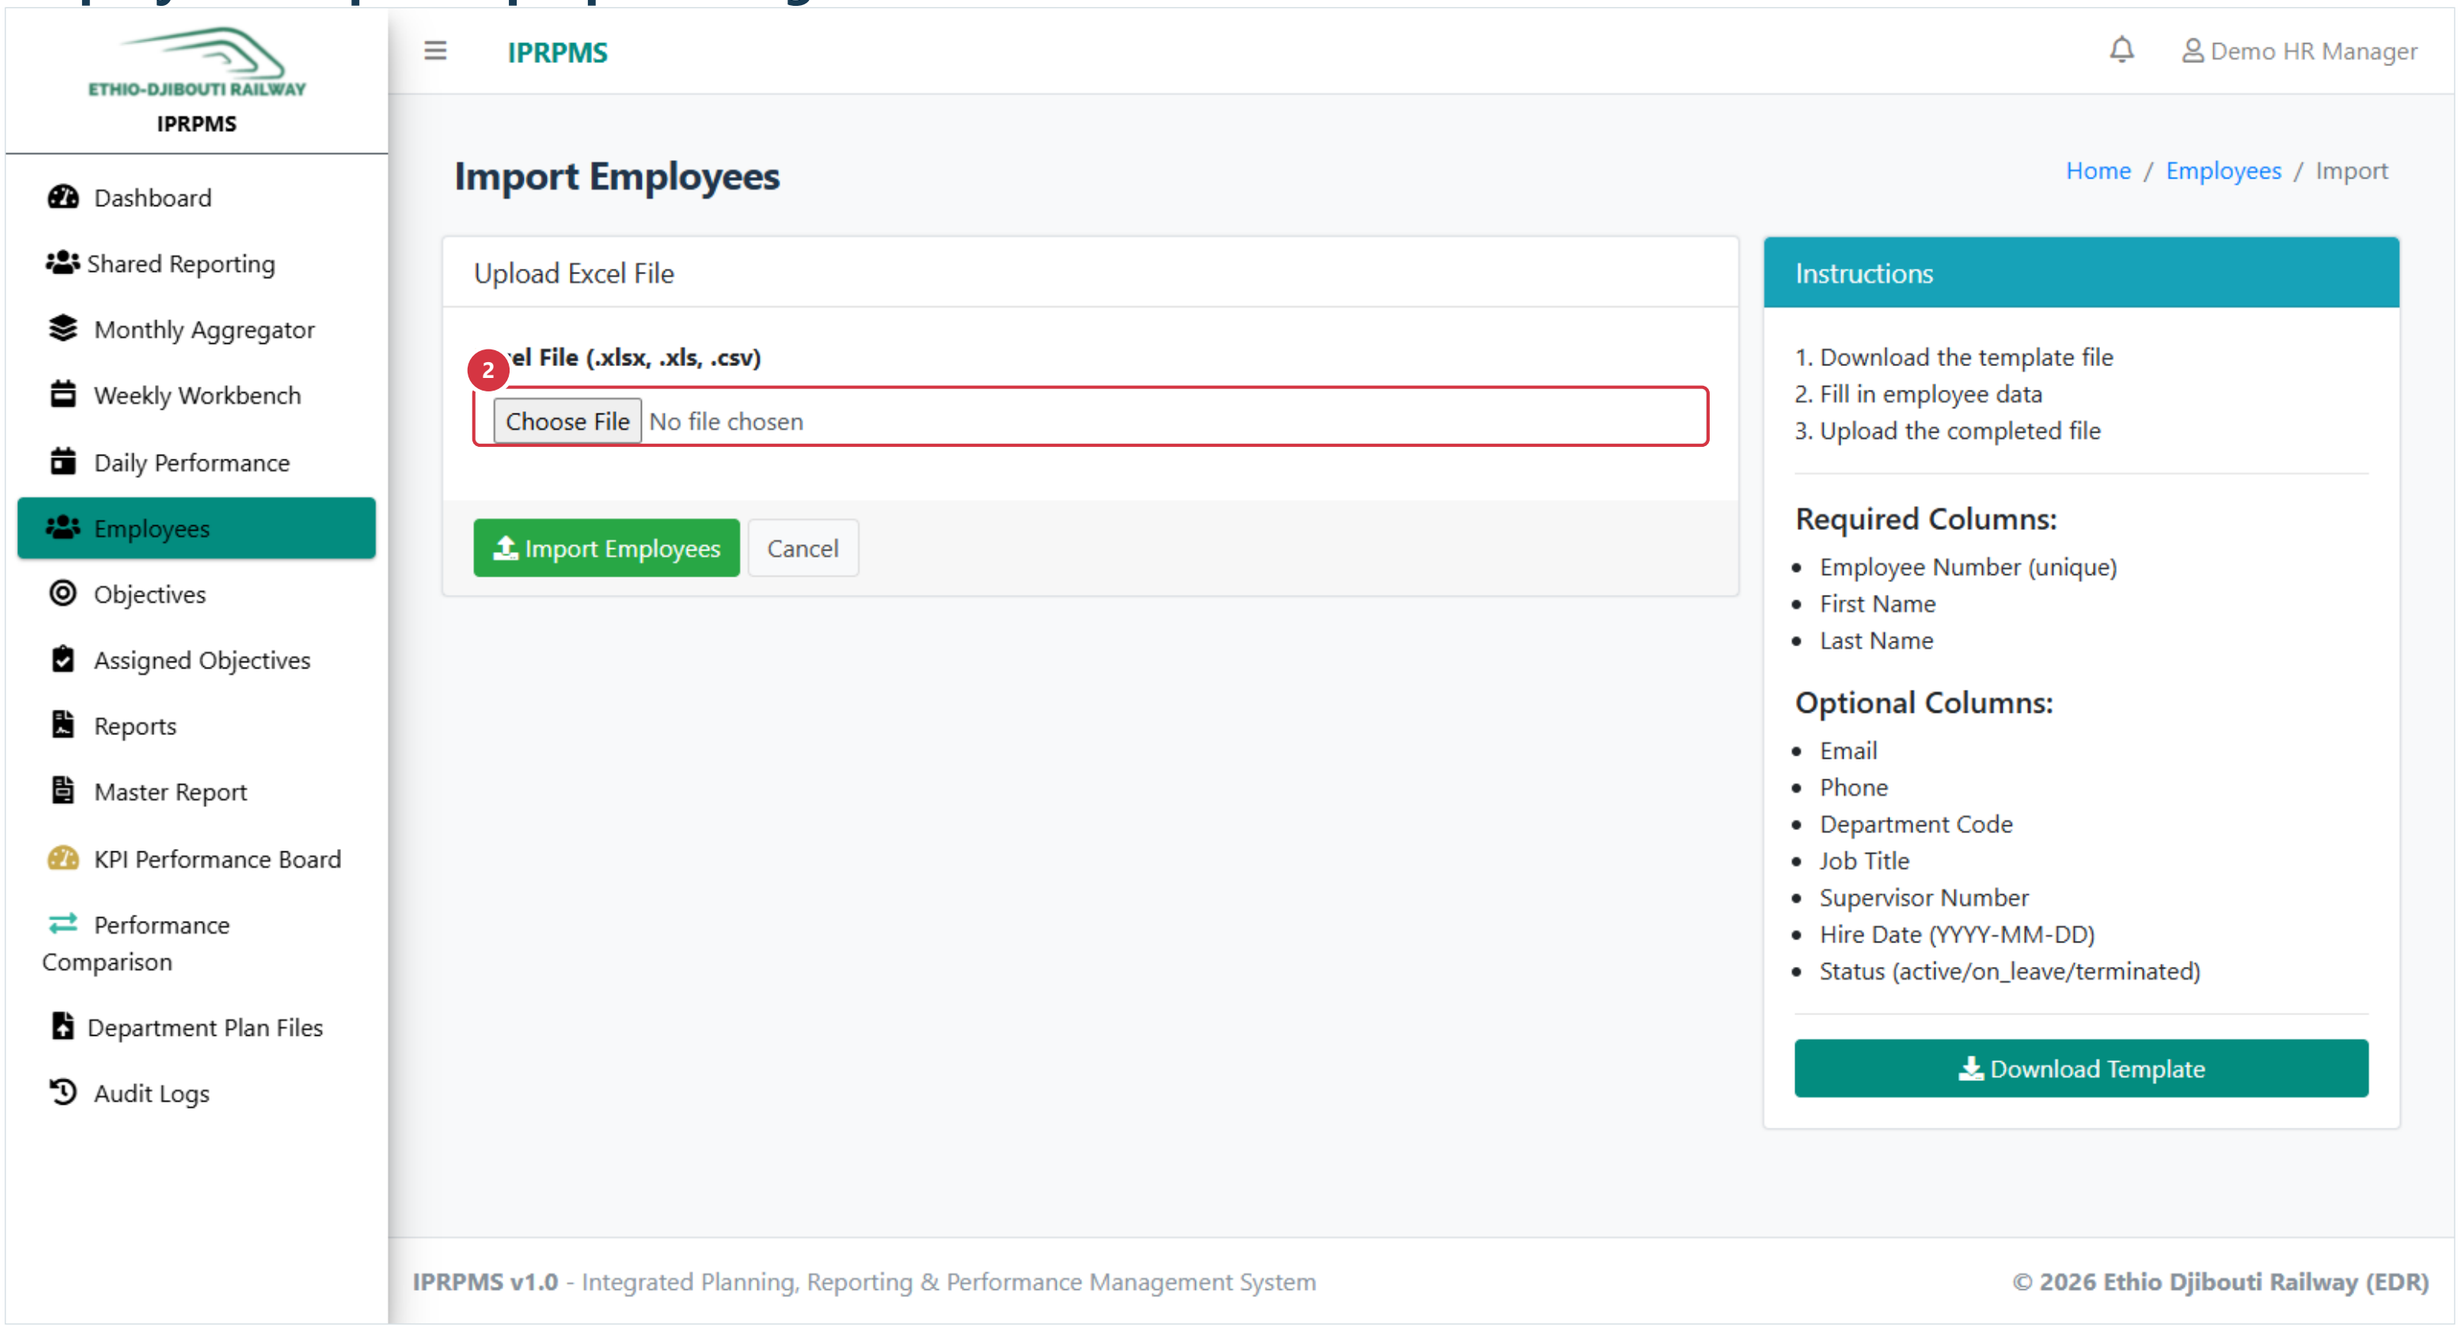

Employees: complete the employee profile

1. Enter the employee identification and contact fields.
2. Choose department, job title and supervisor.
3. Set hire/employment details and click Save Employee.

After this step: An employee record and an active login account are separate records. Account creation requires the relevant permission.

Employees: import a prepared register

1. Download the employee template if required.
2. Choose the completed Excel/CSV file.
3. Click the Import control and review the resulting validation or success message.

After this step: Check required column formats and avoid importing duplicate employee identifiers.

Review branding, workflow settings and audit history

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Settings control appearance and permitted submission windows. Audit history helps establish who changed a record and when.

Before you click

Use an approved change request. Note the prior setting and the affected reporting period or user group.

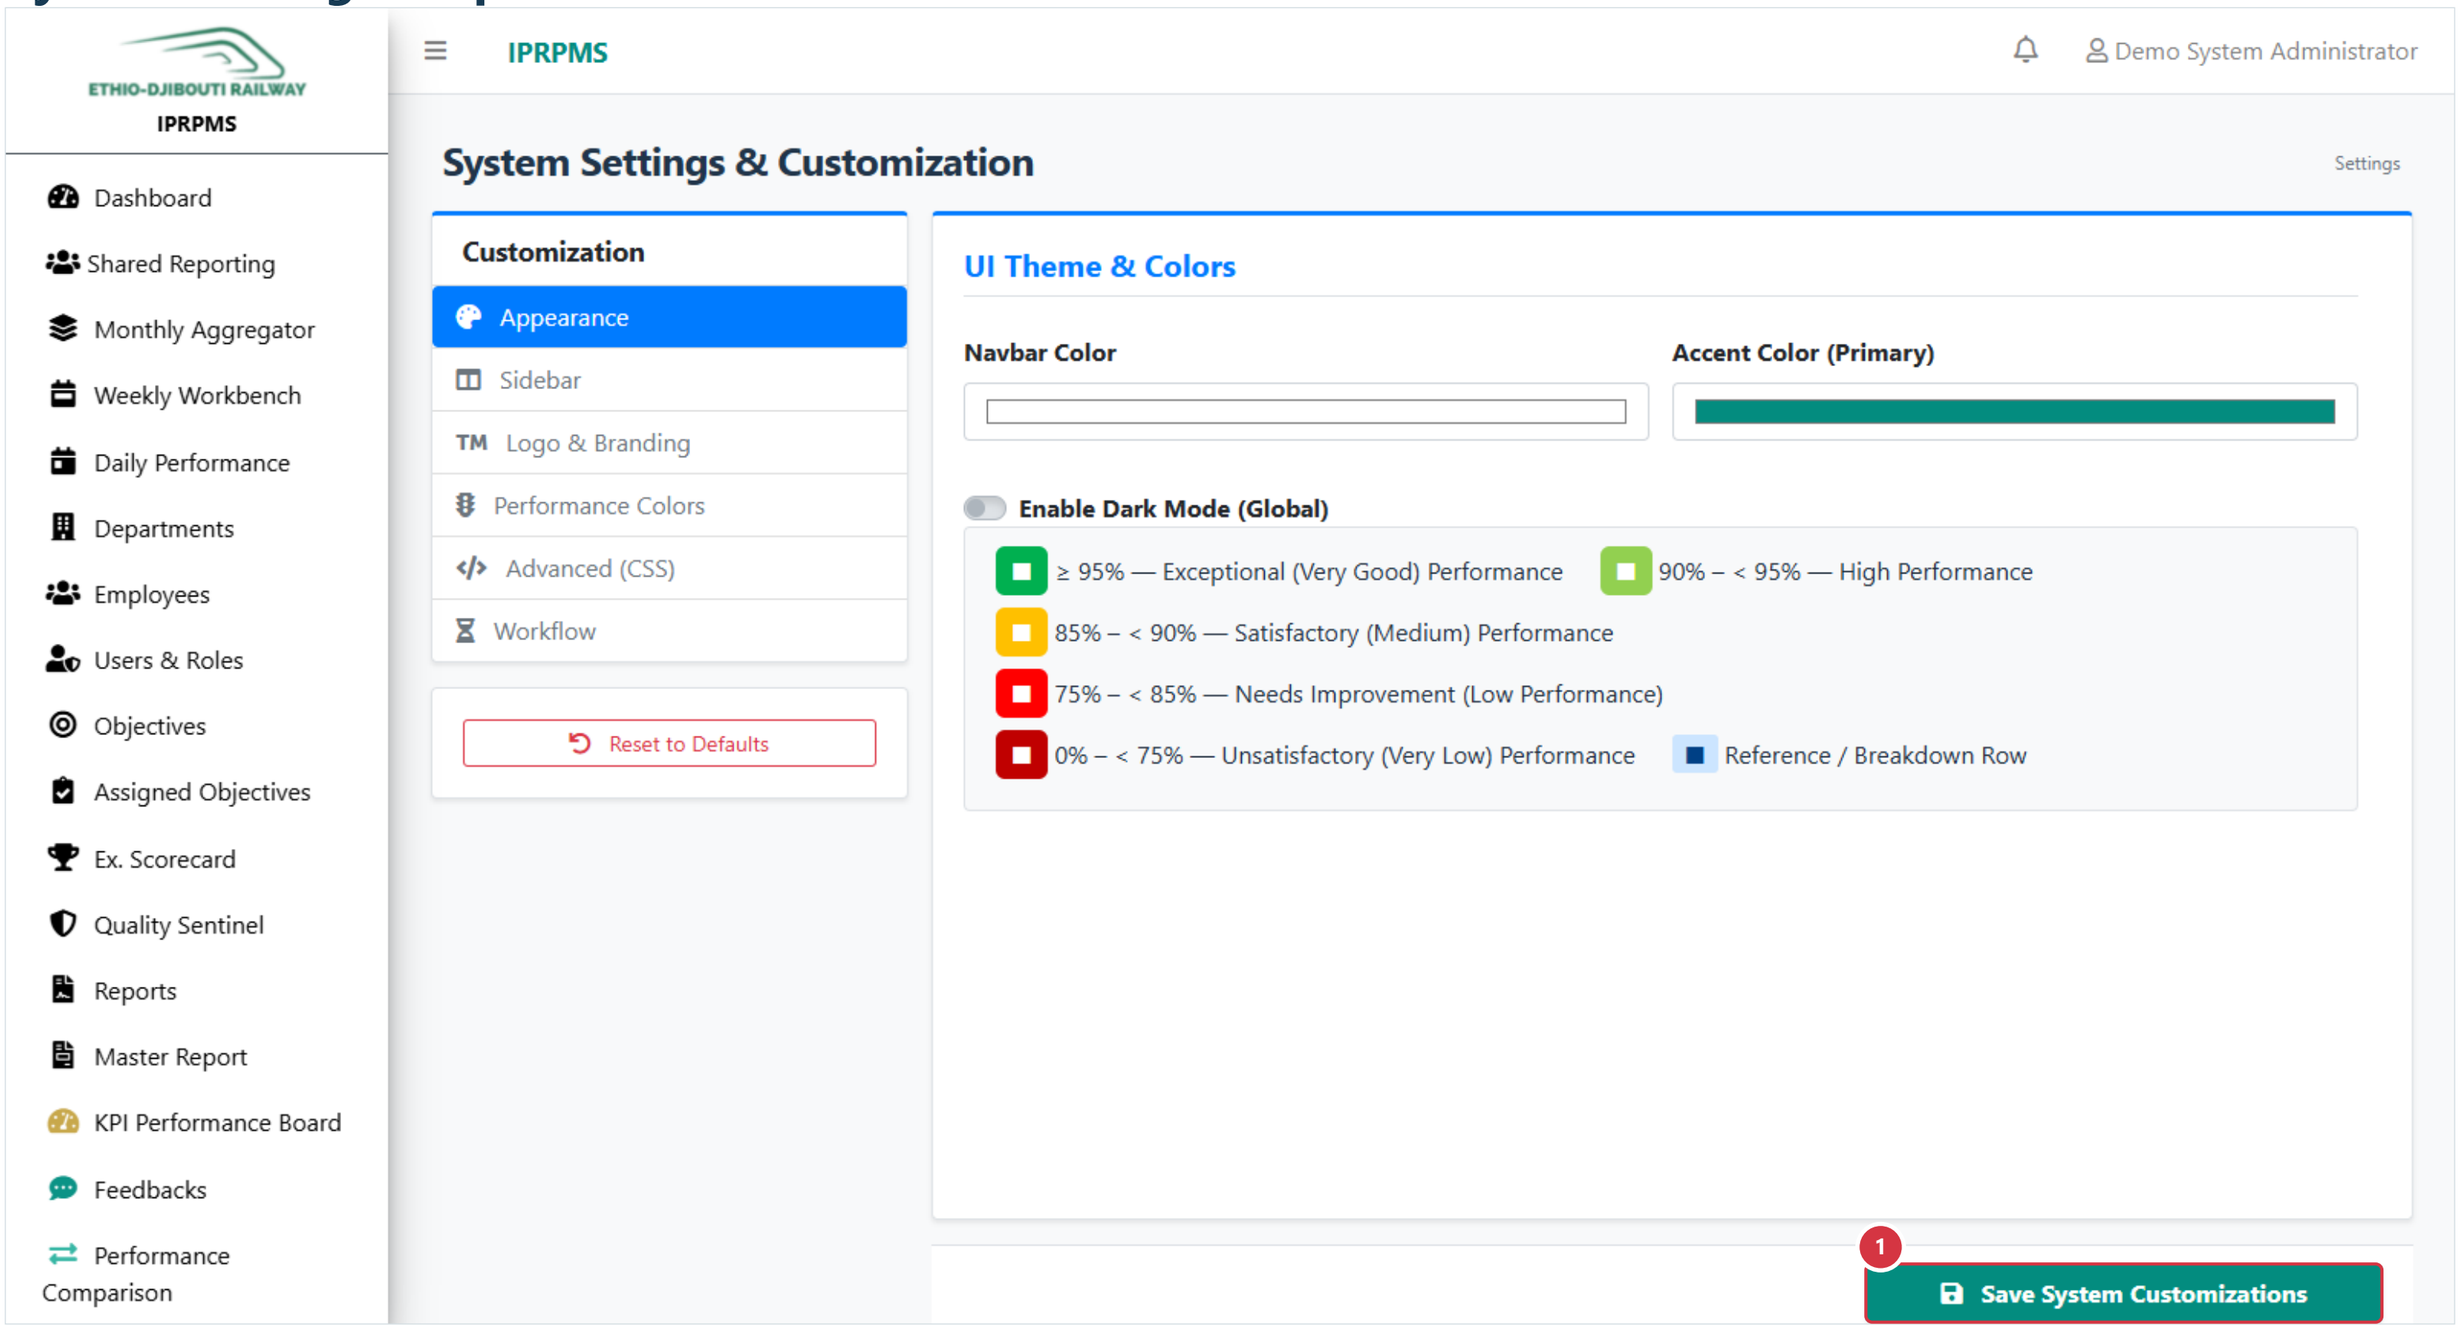

What to check

Change only the intended field. Advanced CSS is administrator-only customization, not a user workflow. Review actor, action, record and time in Audit Logs before concluding why a result changed.

How you know it worked

Save and verify the affected page. Keep evidence of authorized configuration changes and protect personal data in screenshots.

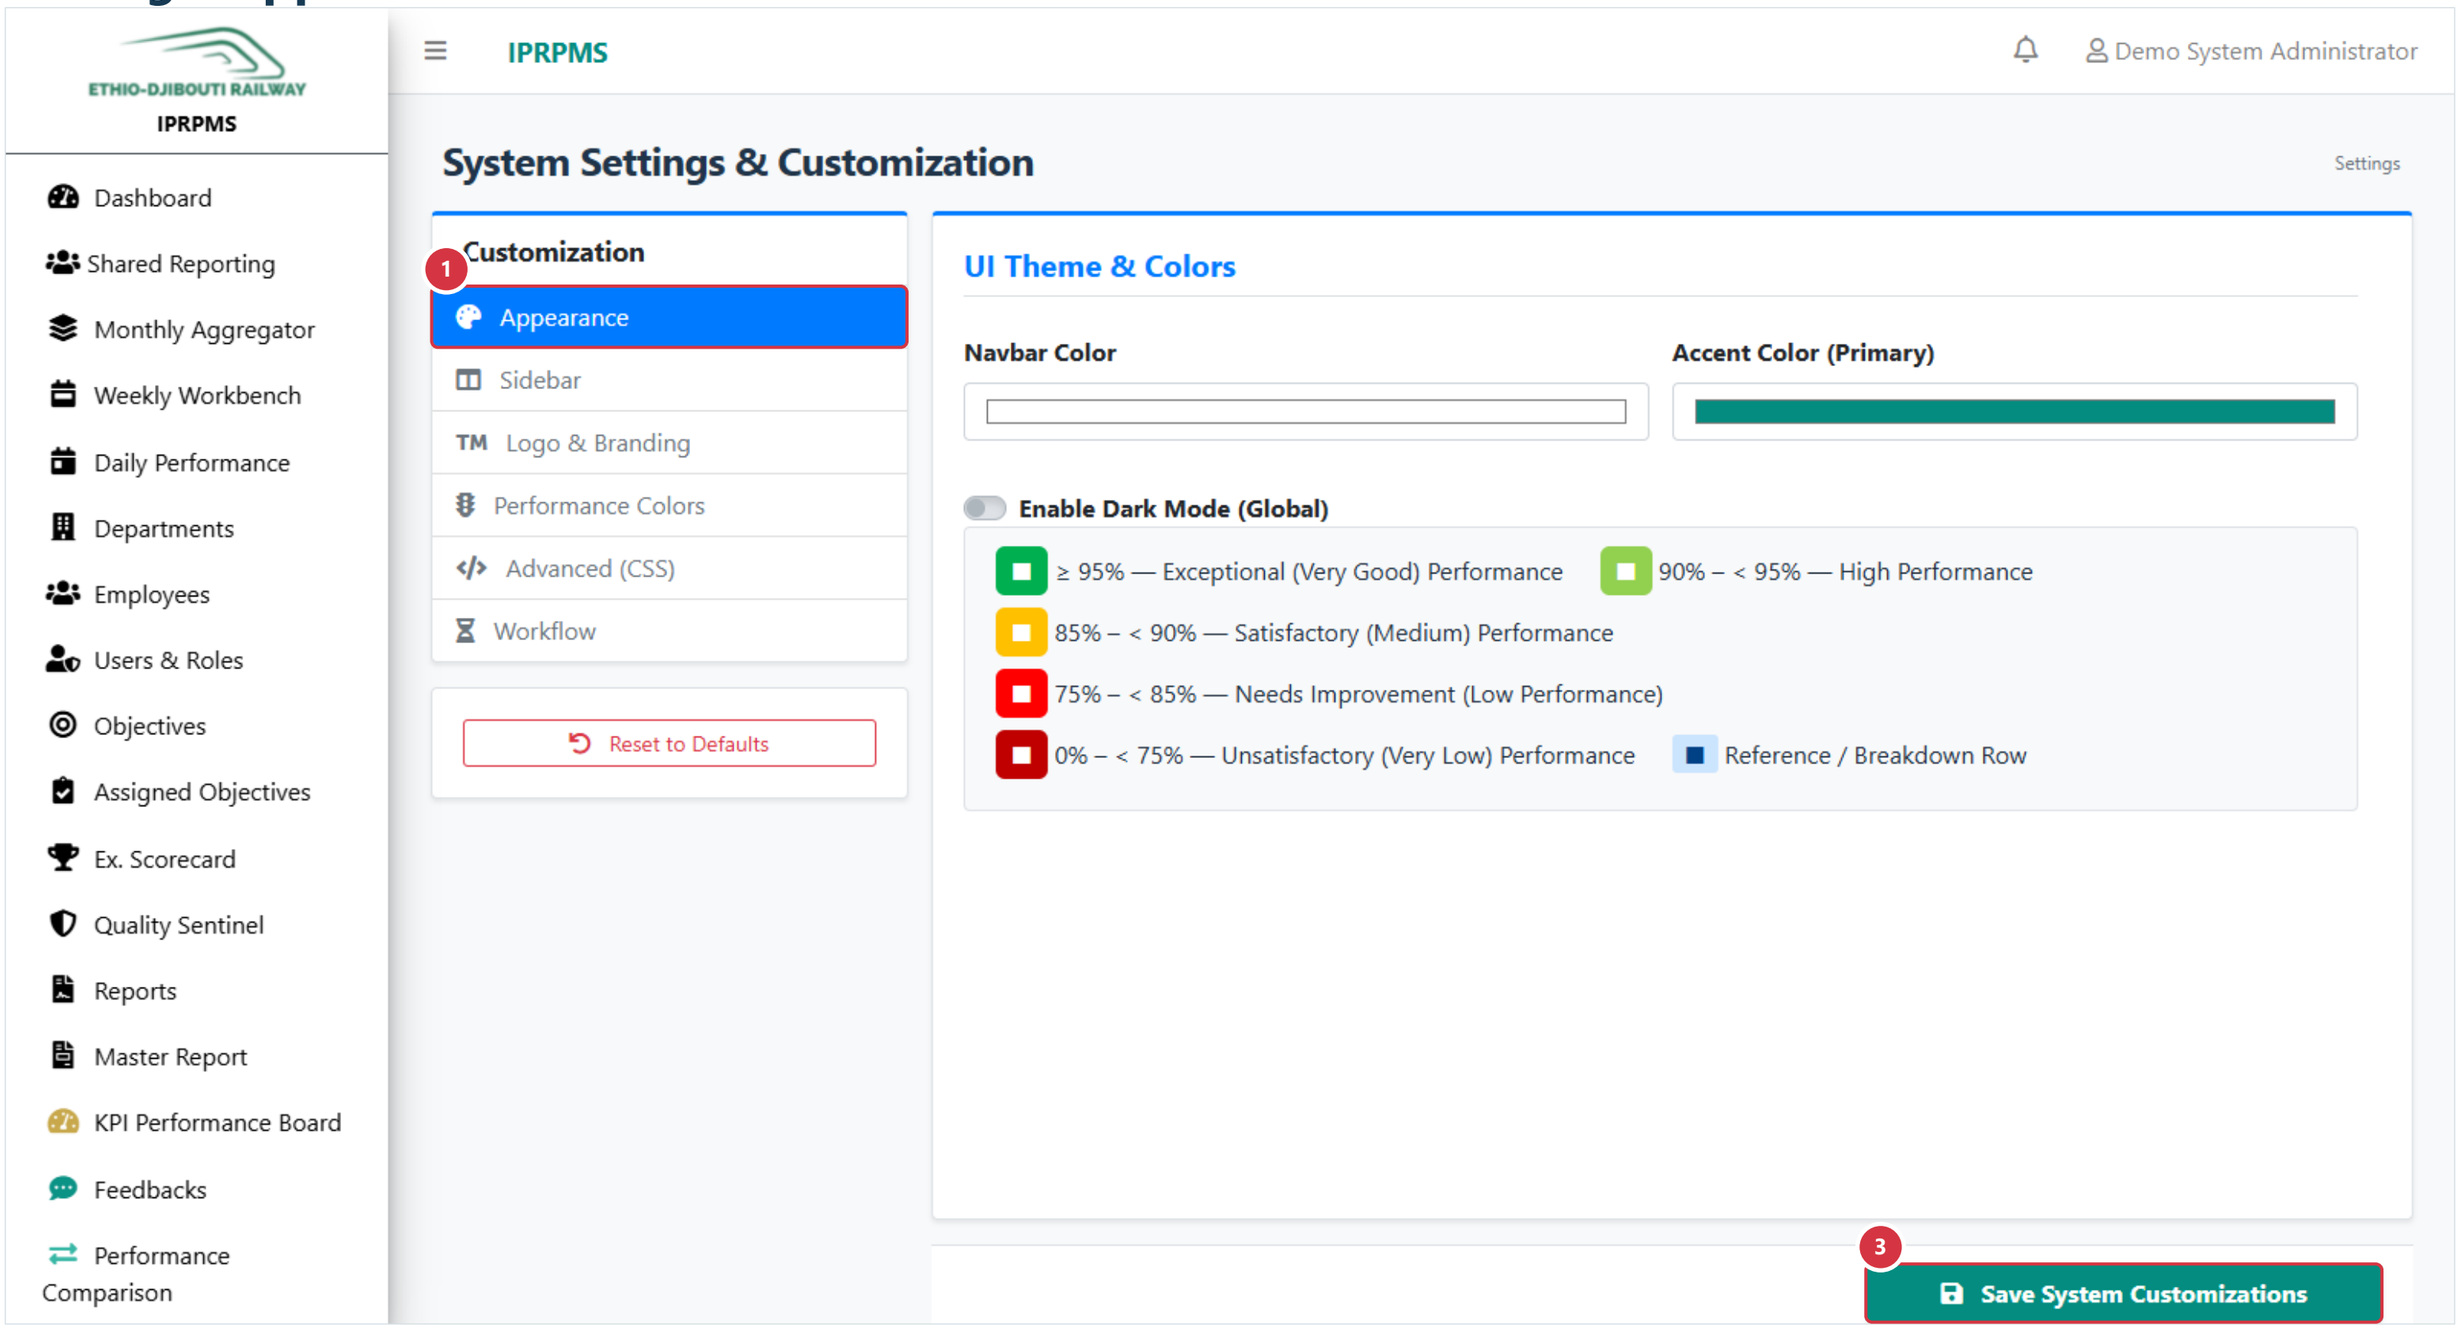

System settings: inspect the available tabs

1. Open Settings.
2. Choose the settings tab for the item you need to administer.
3. Save with Save System Customizations after reviewing the change.

After this step: Use your assigned authority for organization branding and configuration. Avoid Reset to Defaults during normal updates.

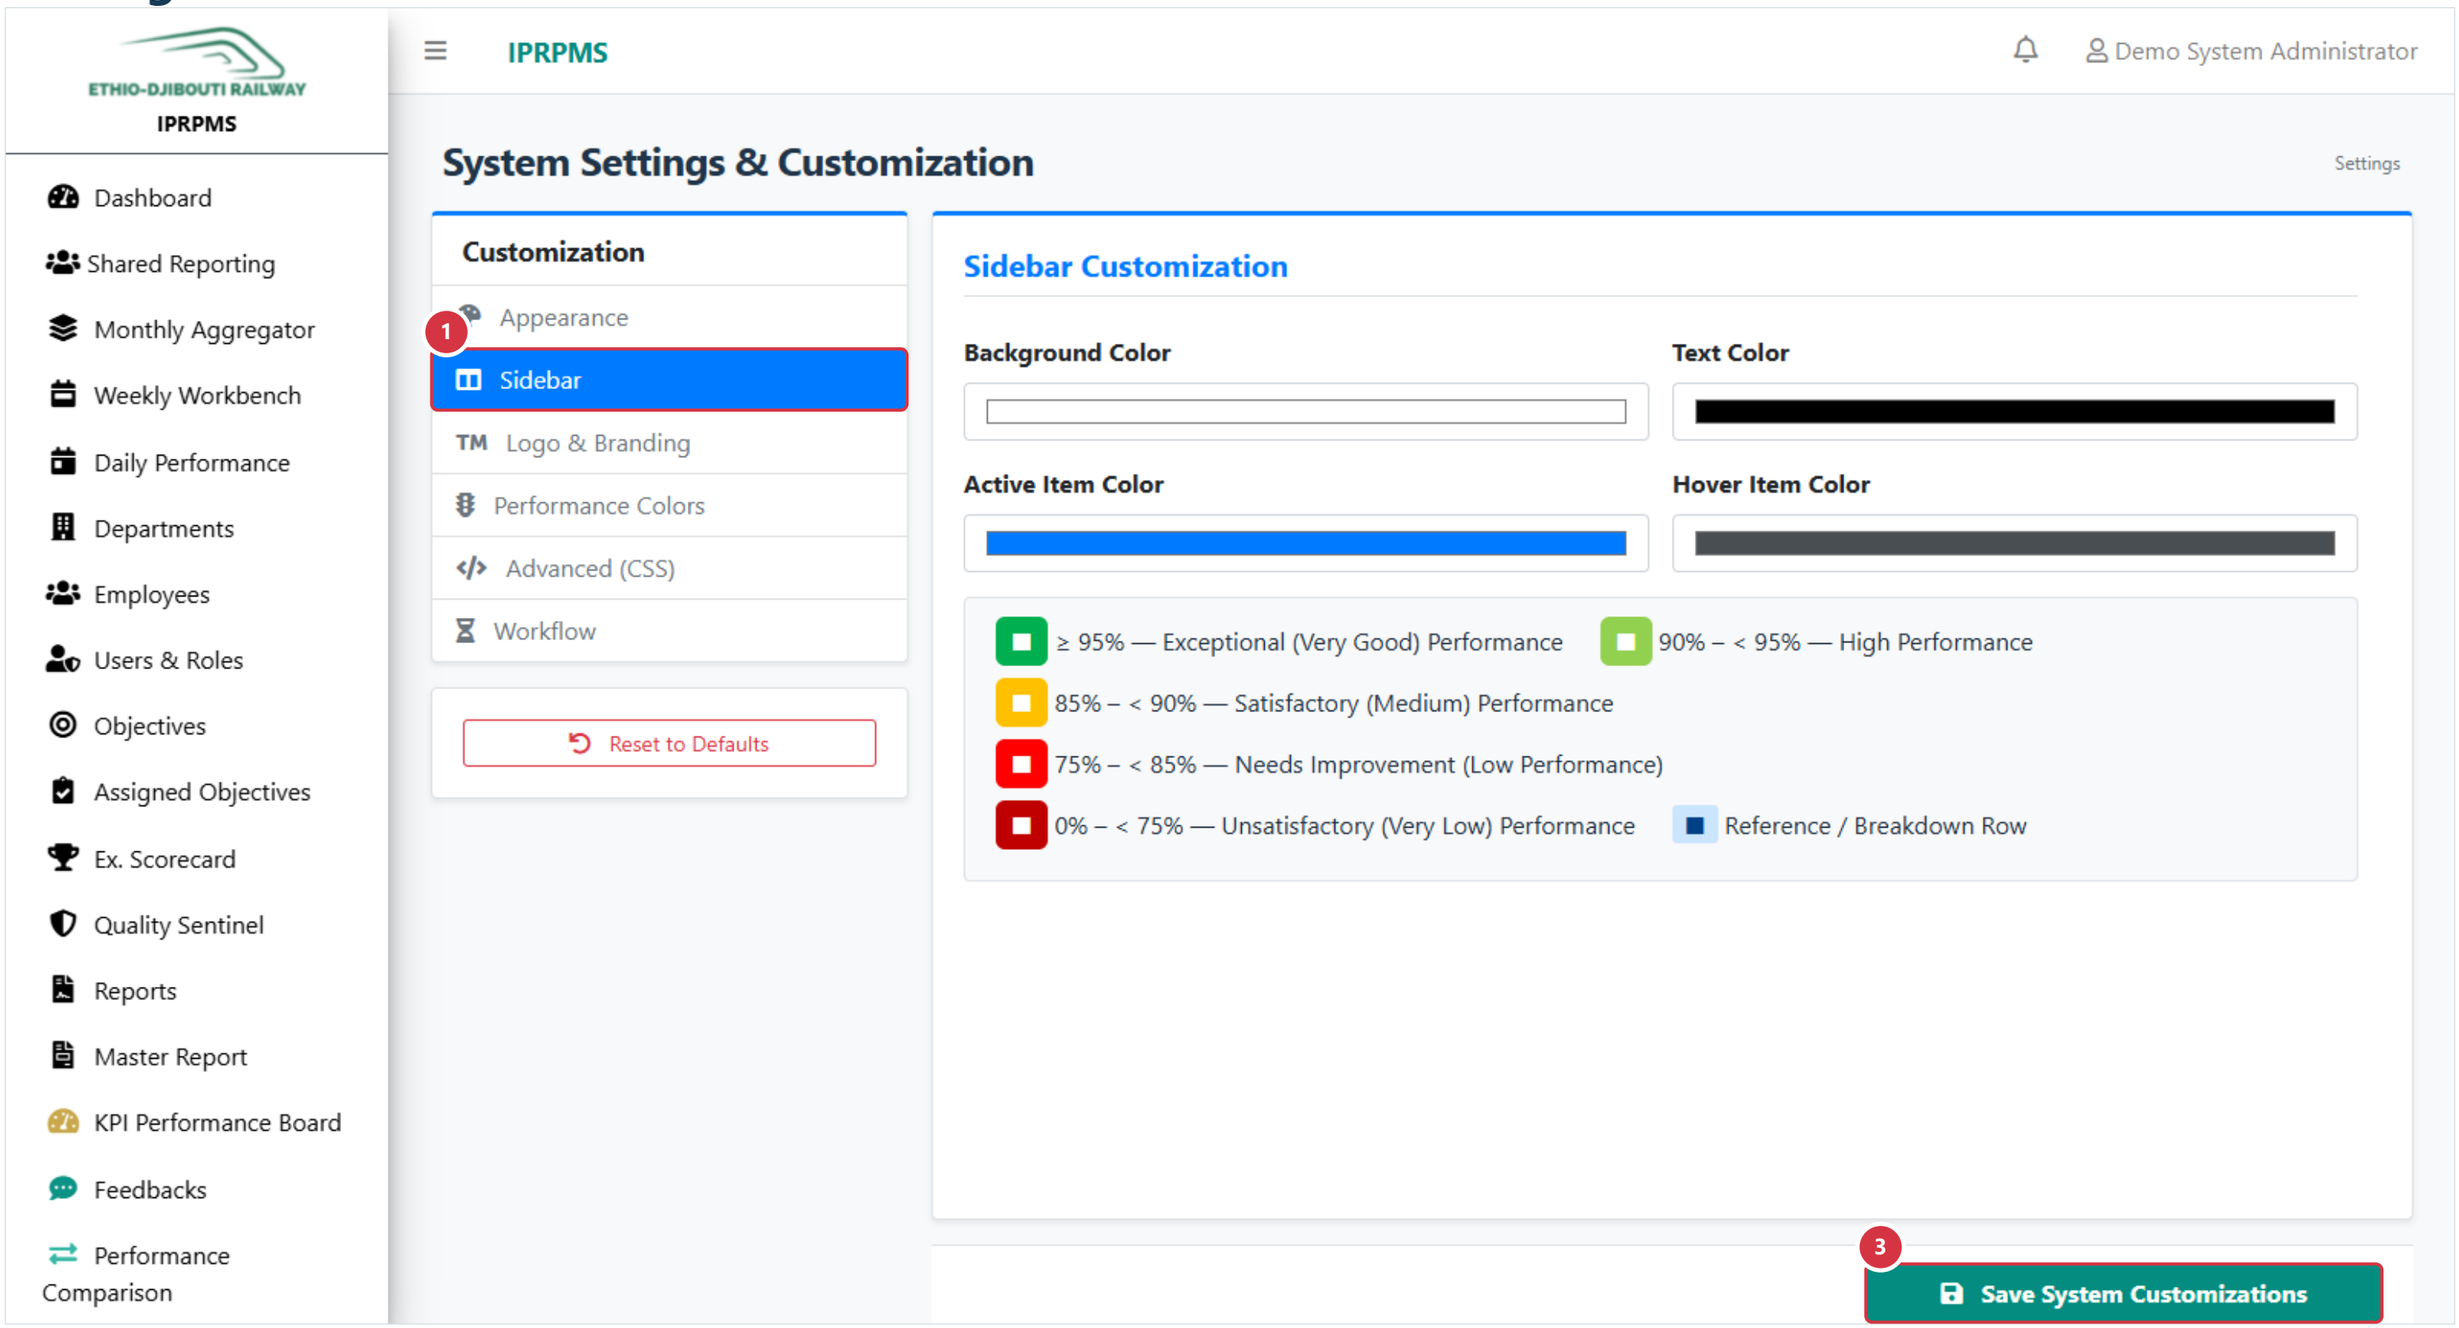

Settings: Appearance

1. Open Settings and select Appearance.
2. Review and edit only the values you are authorized to maintain.
3. Click Save System Customizations after checking the form.

After this step: Changes affect the organization settings. The Reset to Defaults action is separate from a normal save.

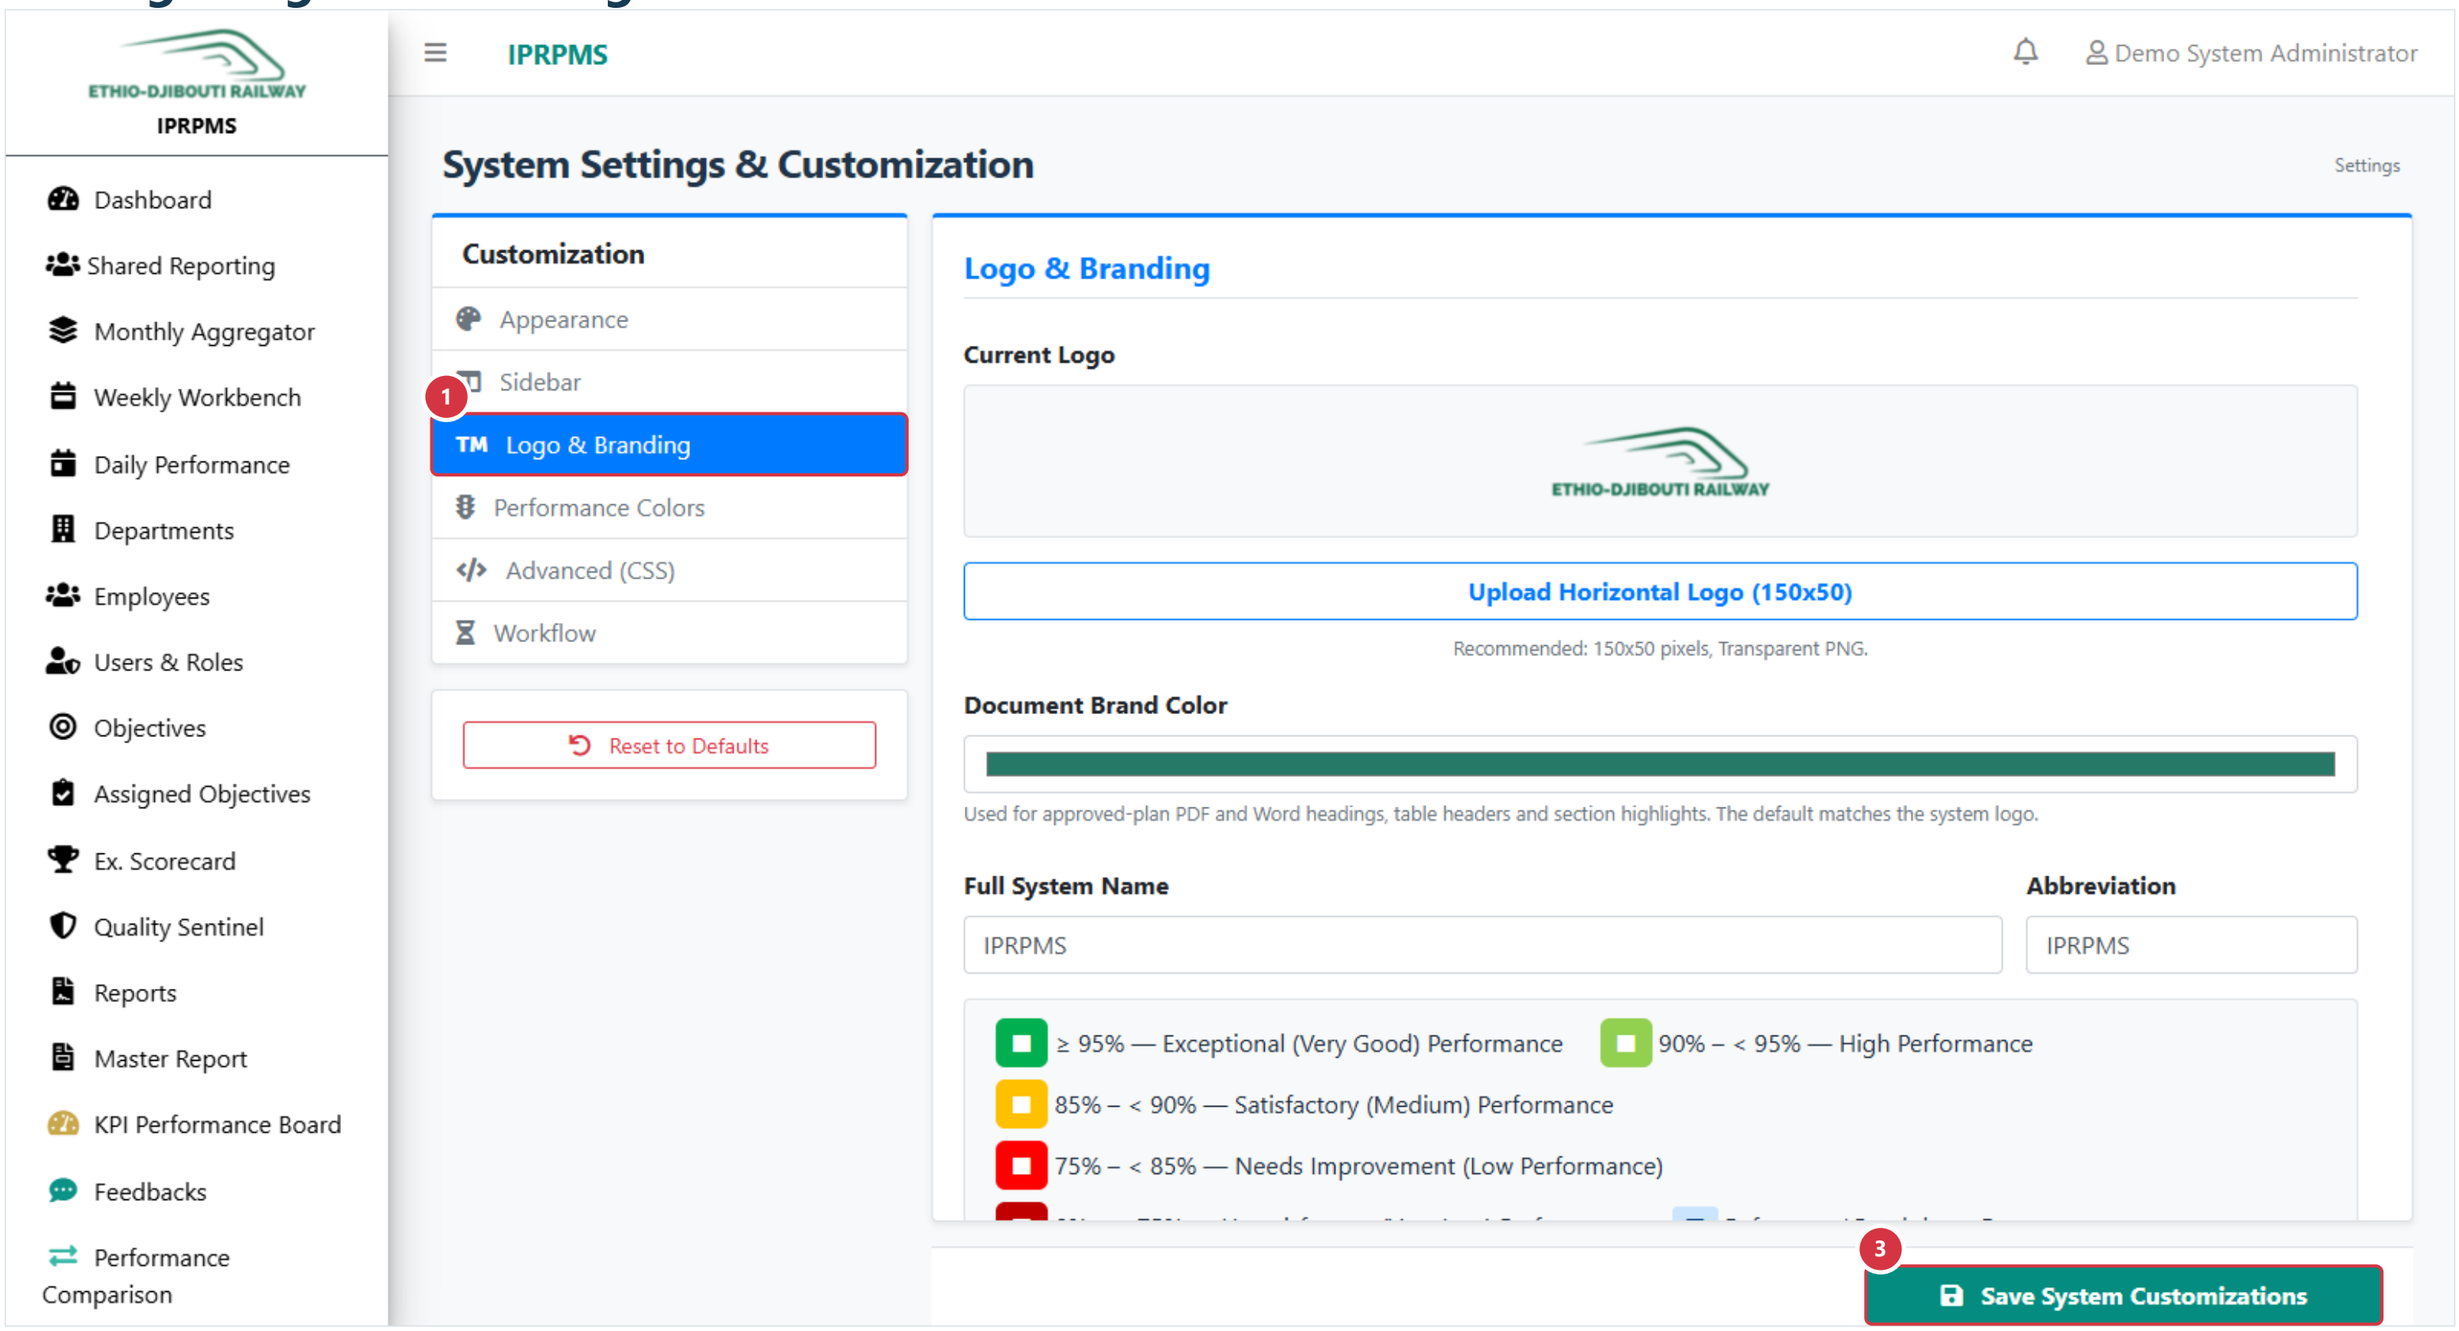

Settings: Sidebar

1. Open Settings and select Sidebar.
2. Review and edit only the values you are authorized to maintain.
3. Click Save System Customizations after checking the form.

After this step: Changes affect the organization settings. The Reset to Defaults action is separate from a normal save.

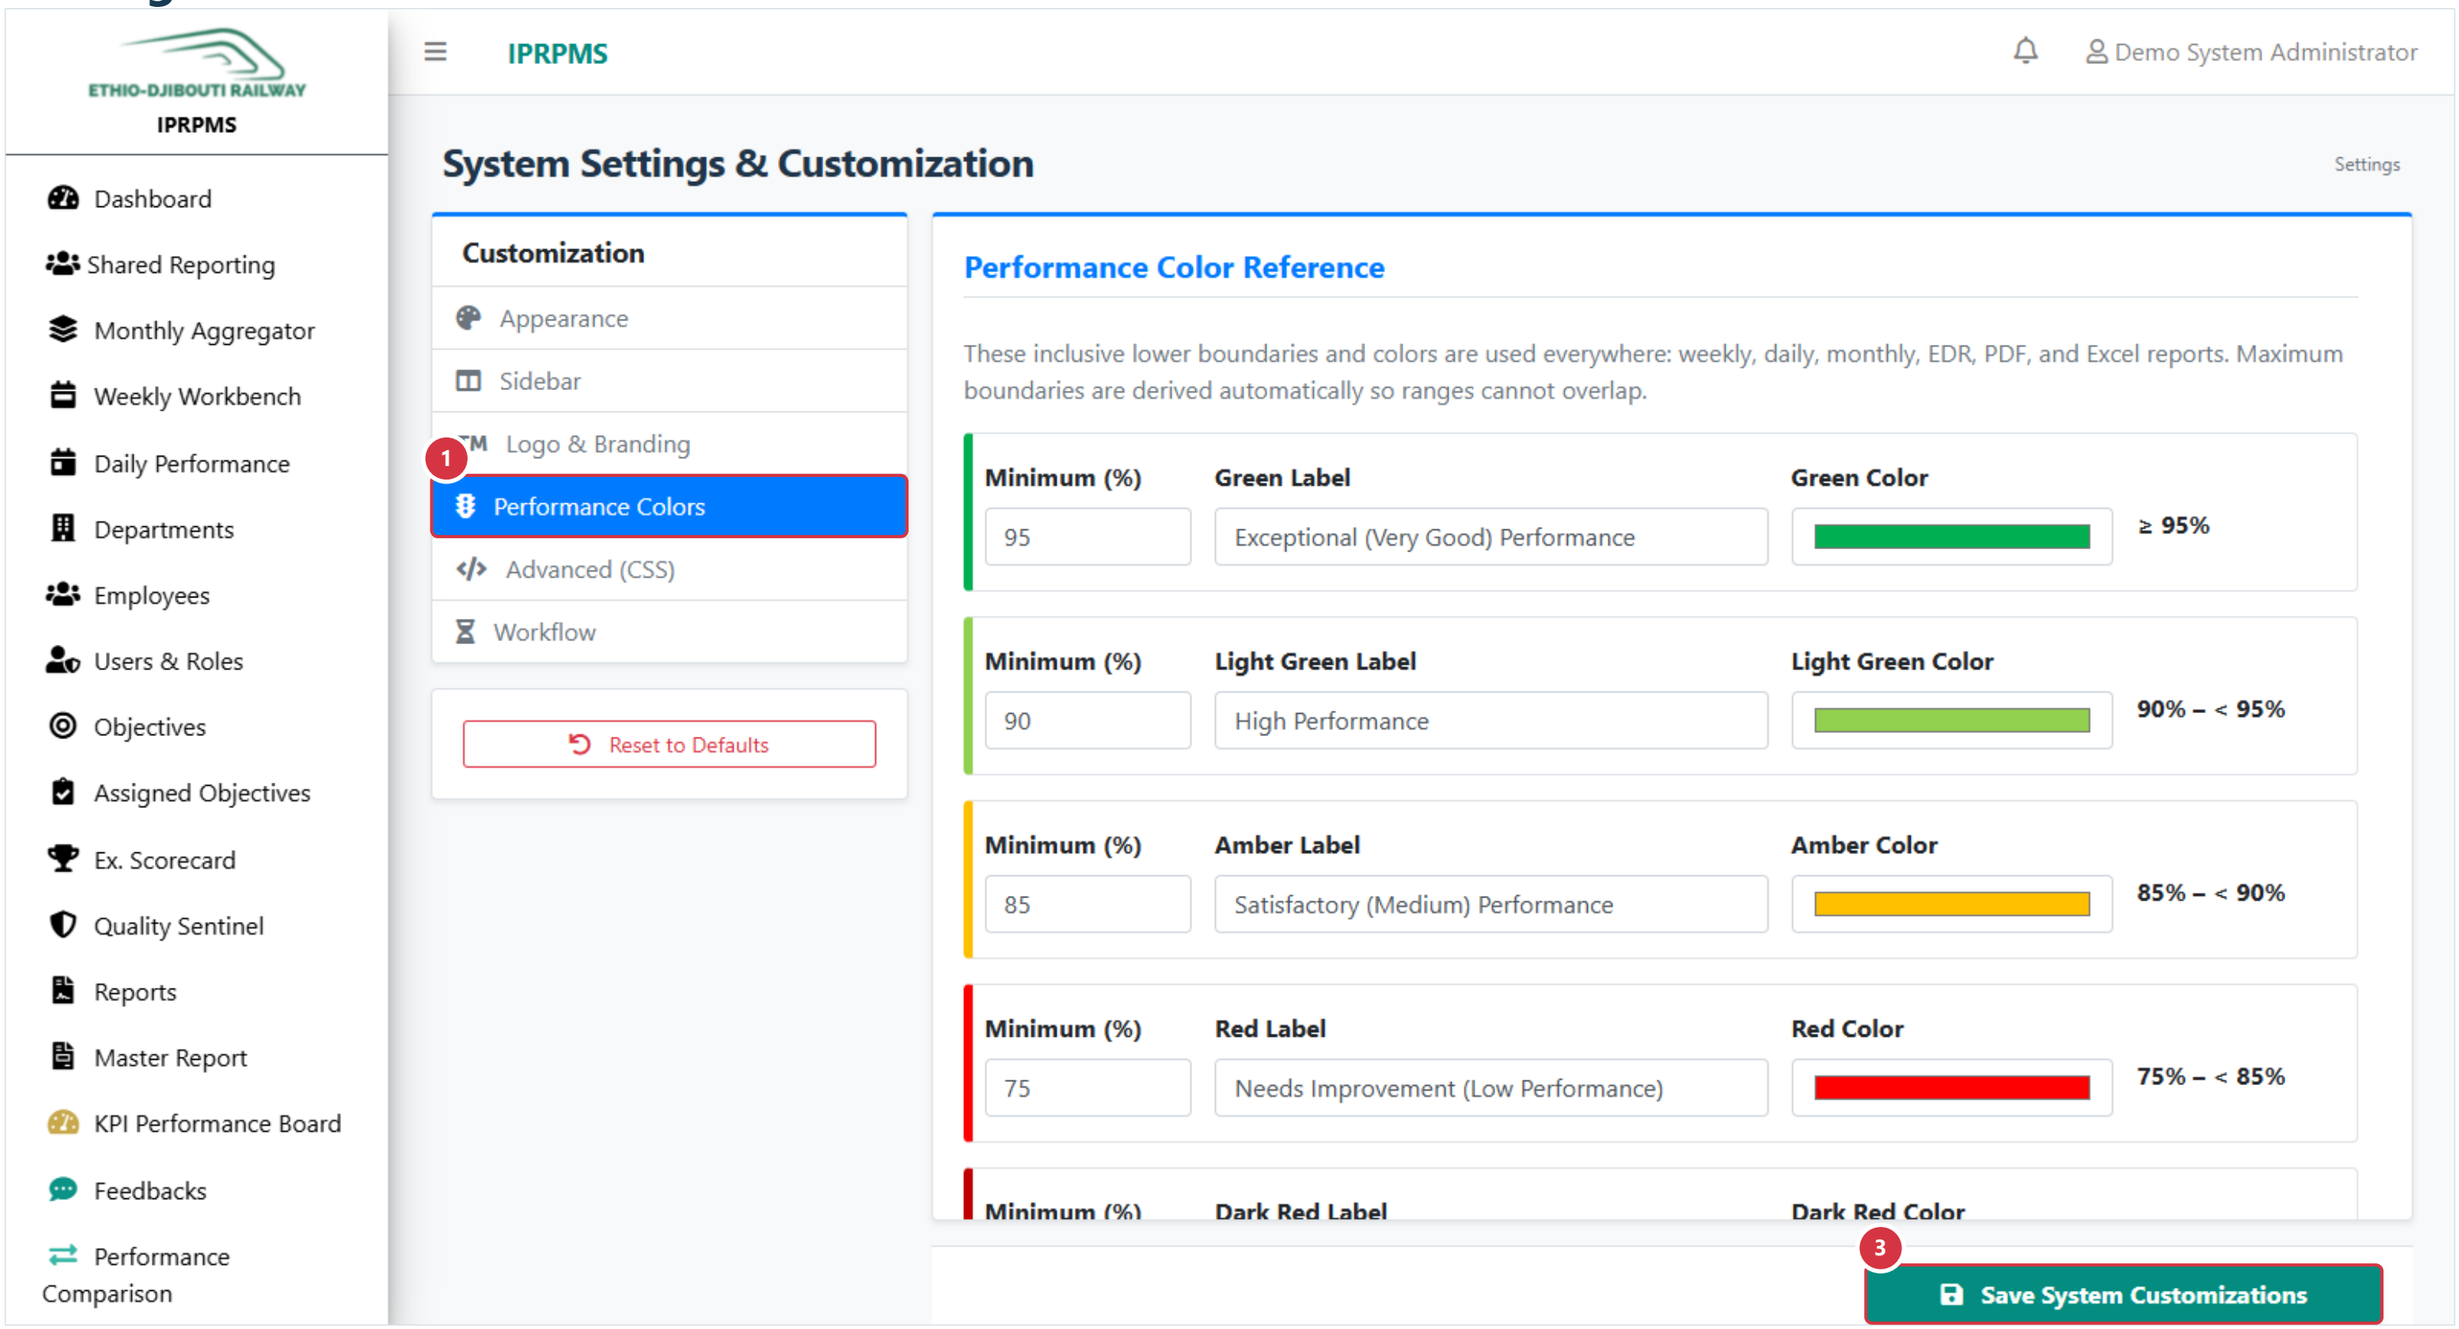

Settings: Logo & Branding

1. Open Settings and select Logo & Branding.
2. Review and edit only the values you are authorized to maintain.
3. Click Save System Customizations after checking the form.

After this step: Changes affect the organization settings. The Reset to Defaults action is separate from a normal save.

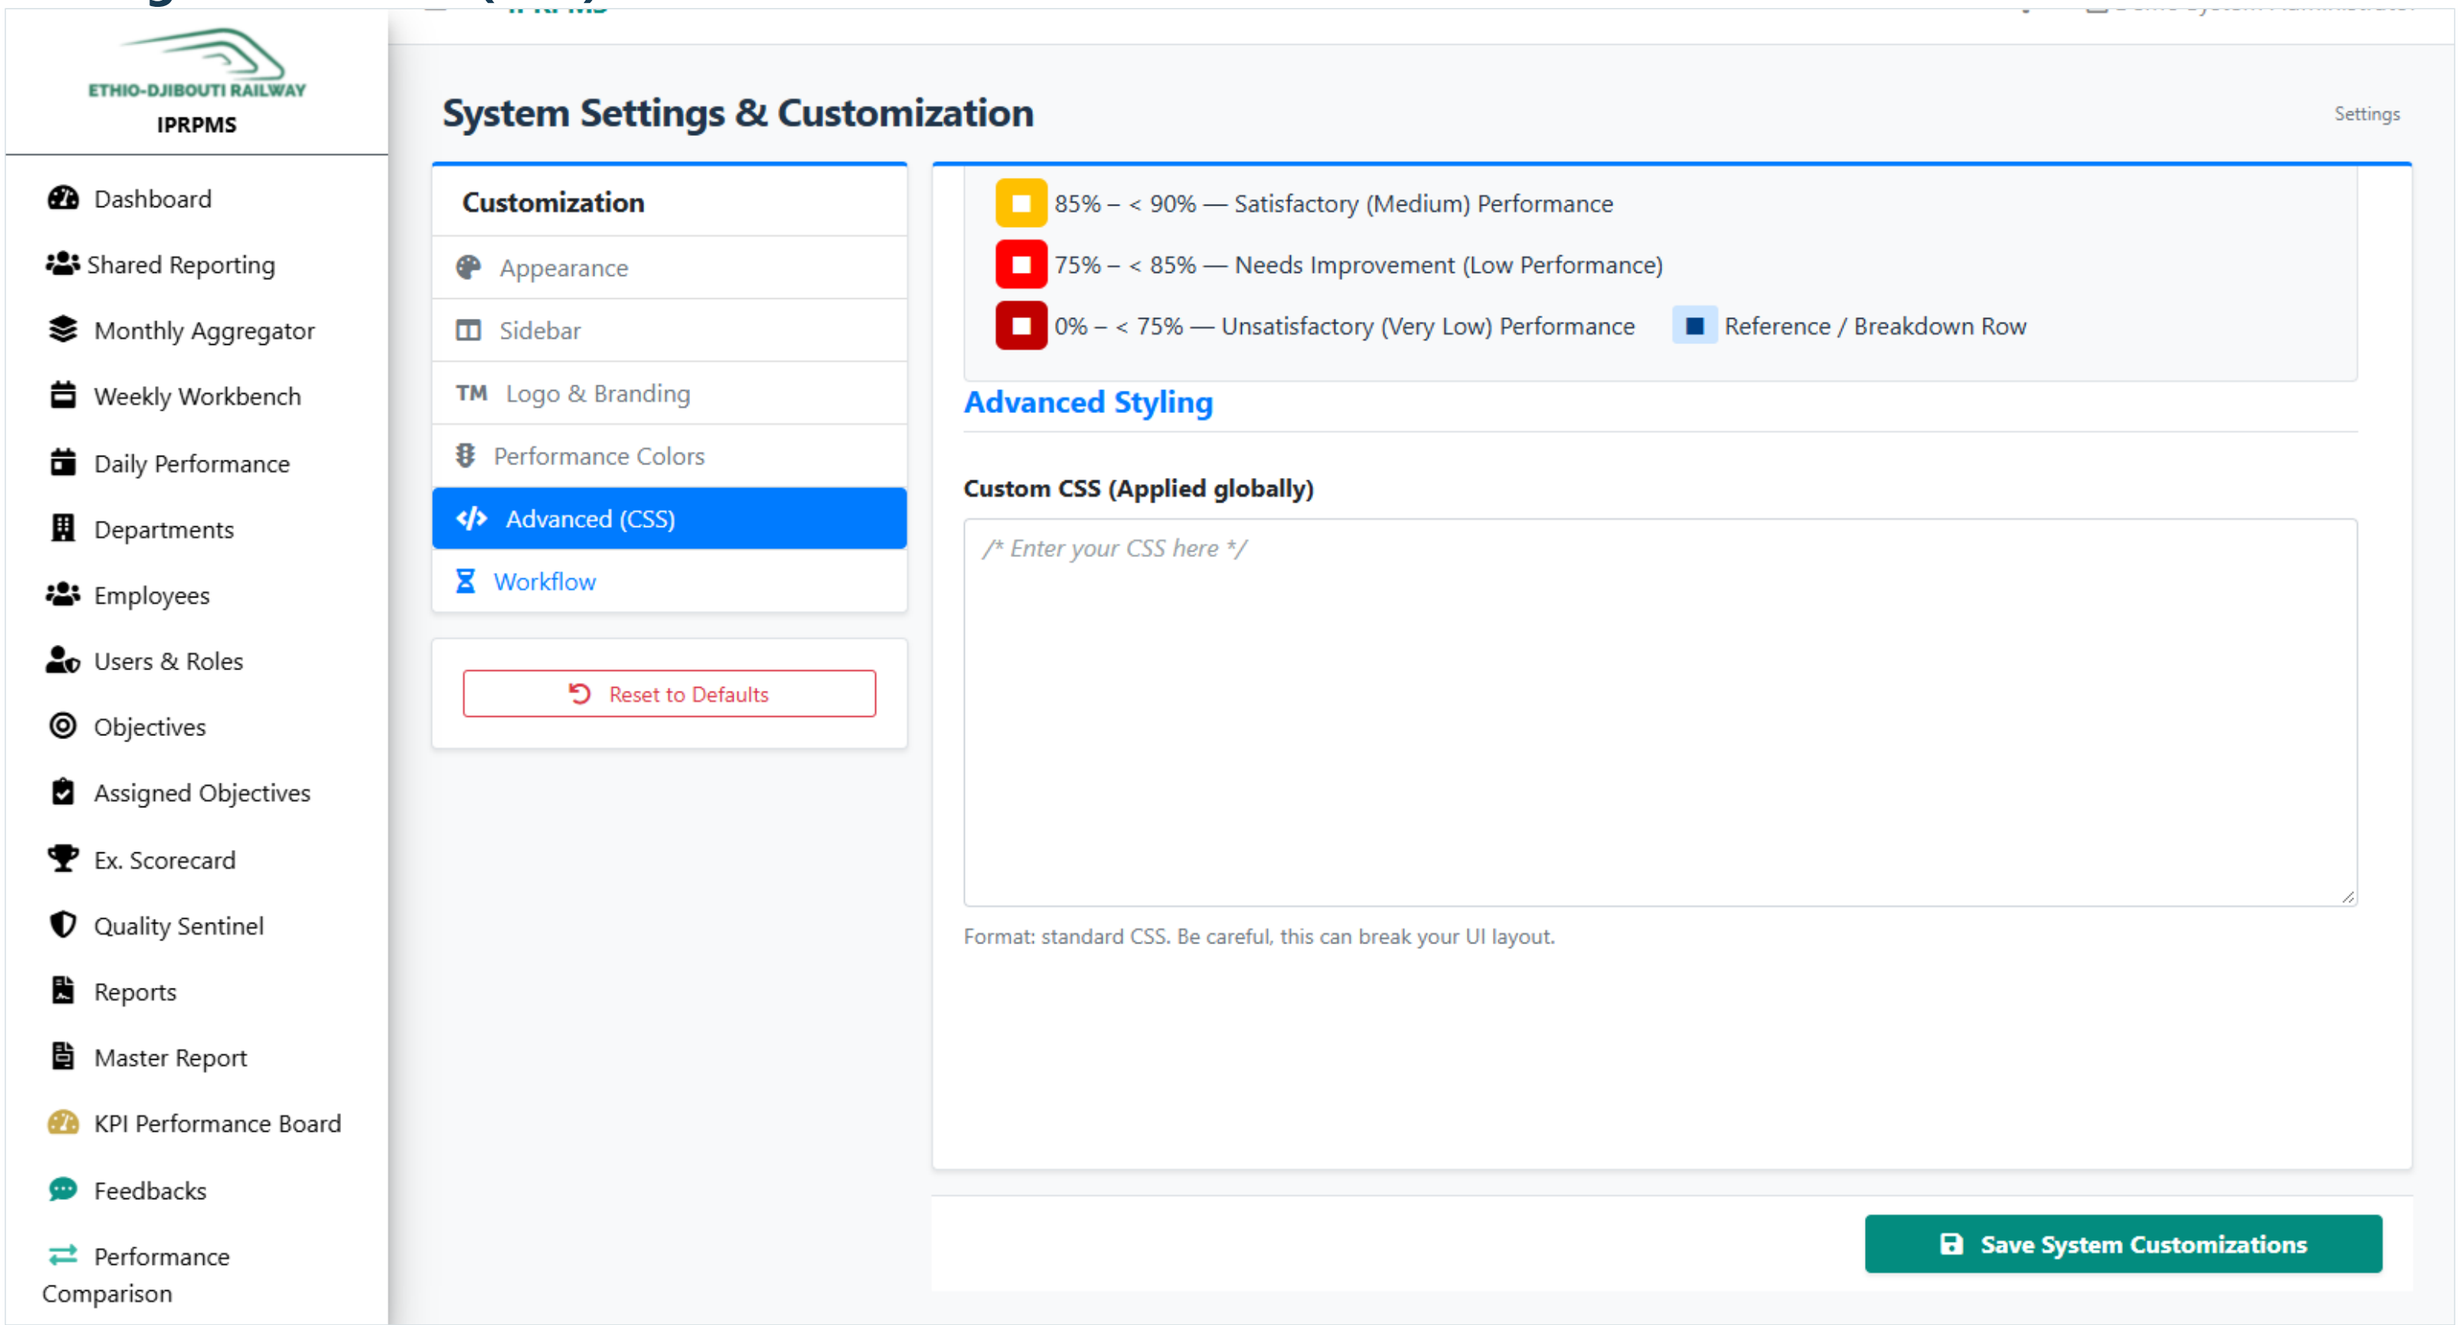

Settings: Performance Colors

1. Open Settings and select Performance Colors.
2. Review and edit only the values you are authorized to maintain.
3. Click Save System Customizations after checking the form.

After this step: Changes affect the organization settings. The Reset to Defaults action is separate from a normal save.

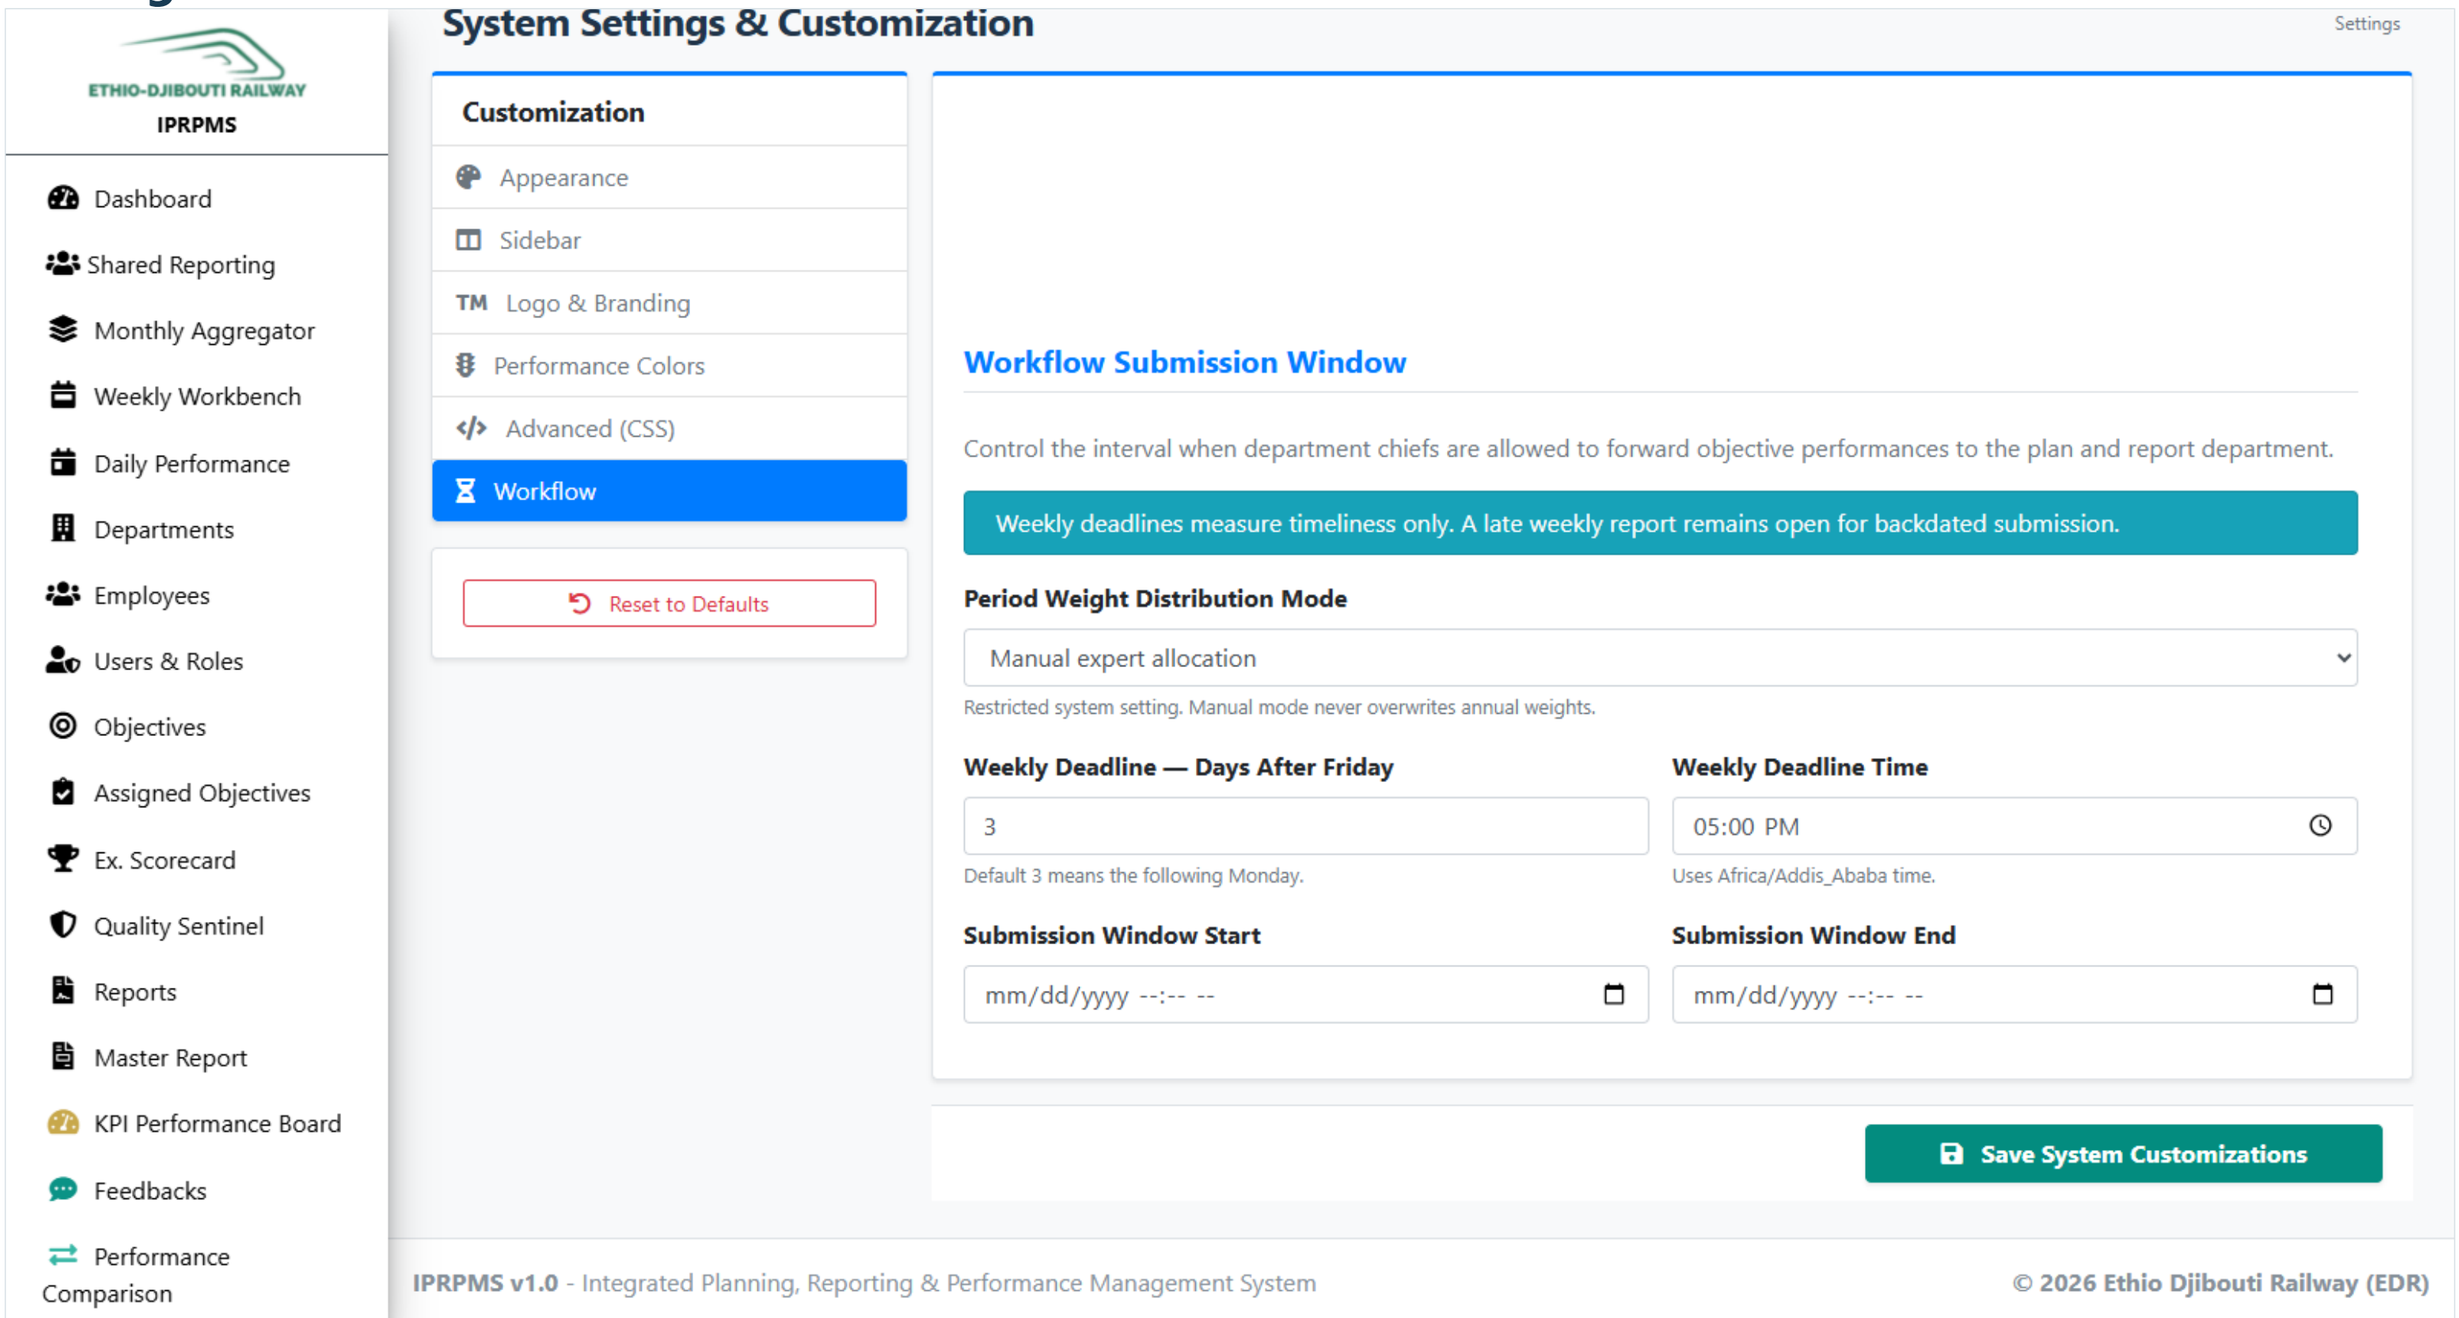

Settings: Advanced (CSS)

1. Select Advanced (CSS) in Settings.
2. Review the active settings panel and change only authorized values.
3. Click Save System Customizations to apply the reviewed settings.

After this step: Custom CSS changes the application appearance. The administrator should validate it before saving.

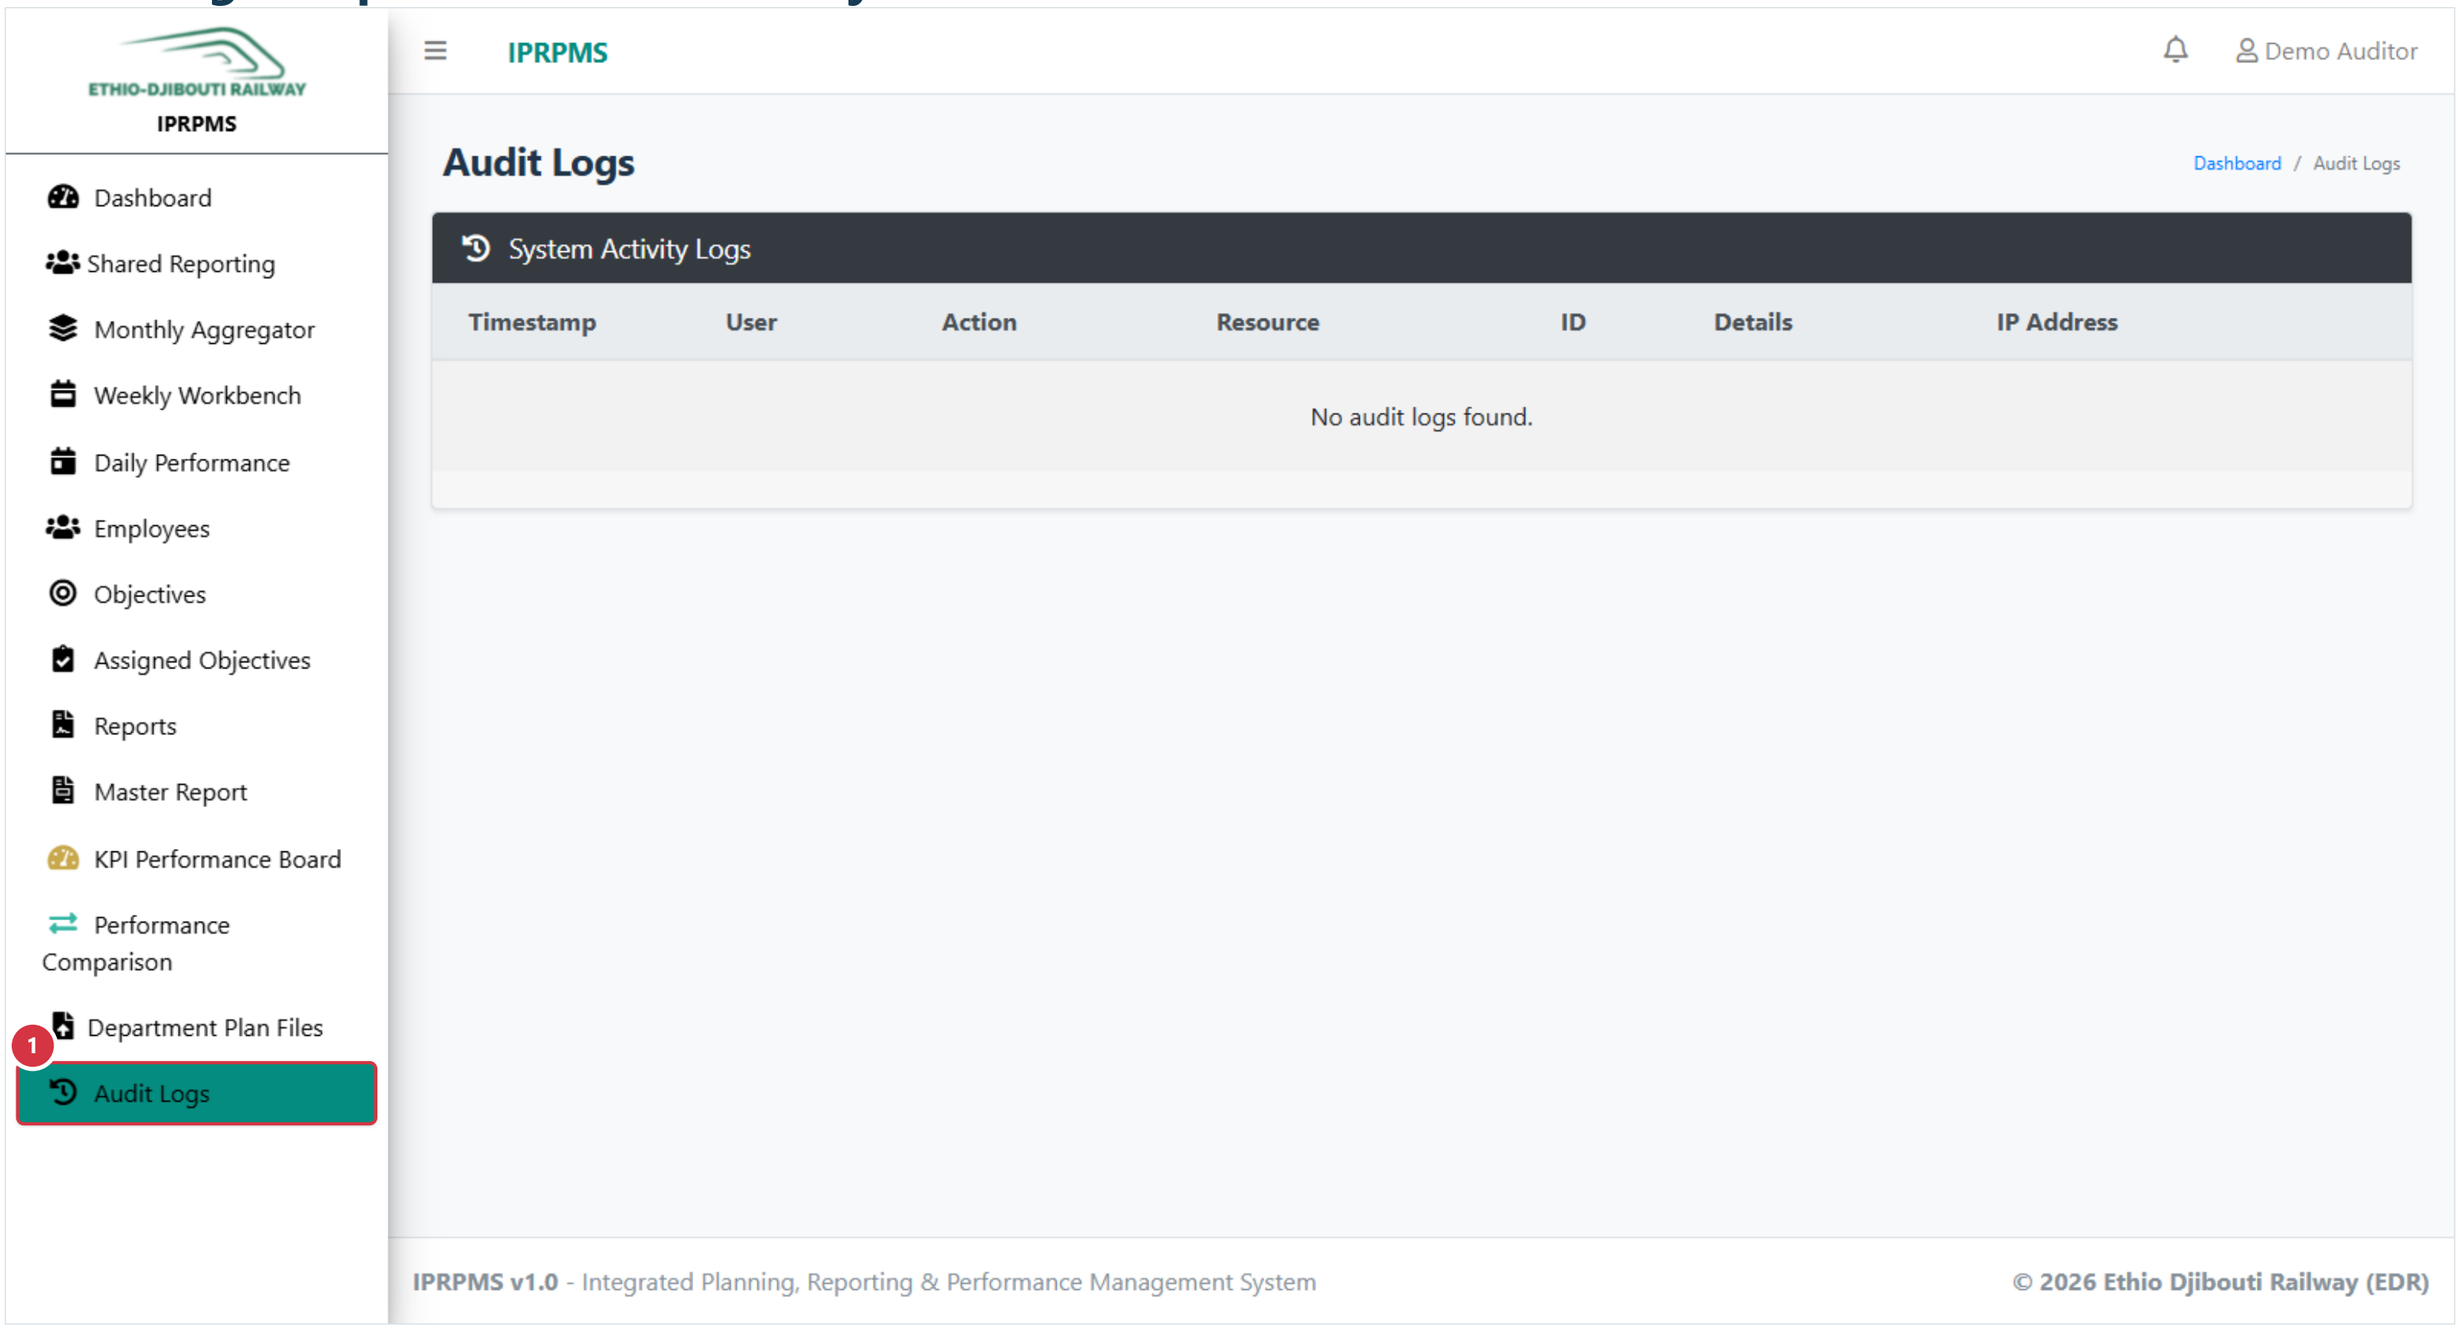

Settings: Workflow

1. Select Workflow in Settings.
2. Review the active settings panel and change only authorized values.
3. Click Save System Customizations to apply the reviewed settings.

After this step: Settings affect the organization. A submission-window change affects which department submissions are allowed.

Audit Logs: inspect recorded activity

1. Open Audit Logs.
2. Read the actor, activity, affected record and time.
3. Use the list search/navigation controls provided to locate the relevant event.

After this step: Audit Logs are read-only. Use the affected business record to perform an authorized correction.

Monitor the scorecard and data-quality findings

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Monitoring can reveal missing submissions or inconsistent data, but a finding is not permission to rewrite a business result.

Before you click

Select the intended organizational scope and reporting period.

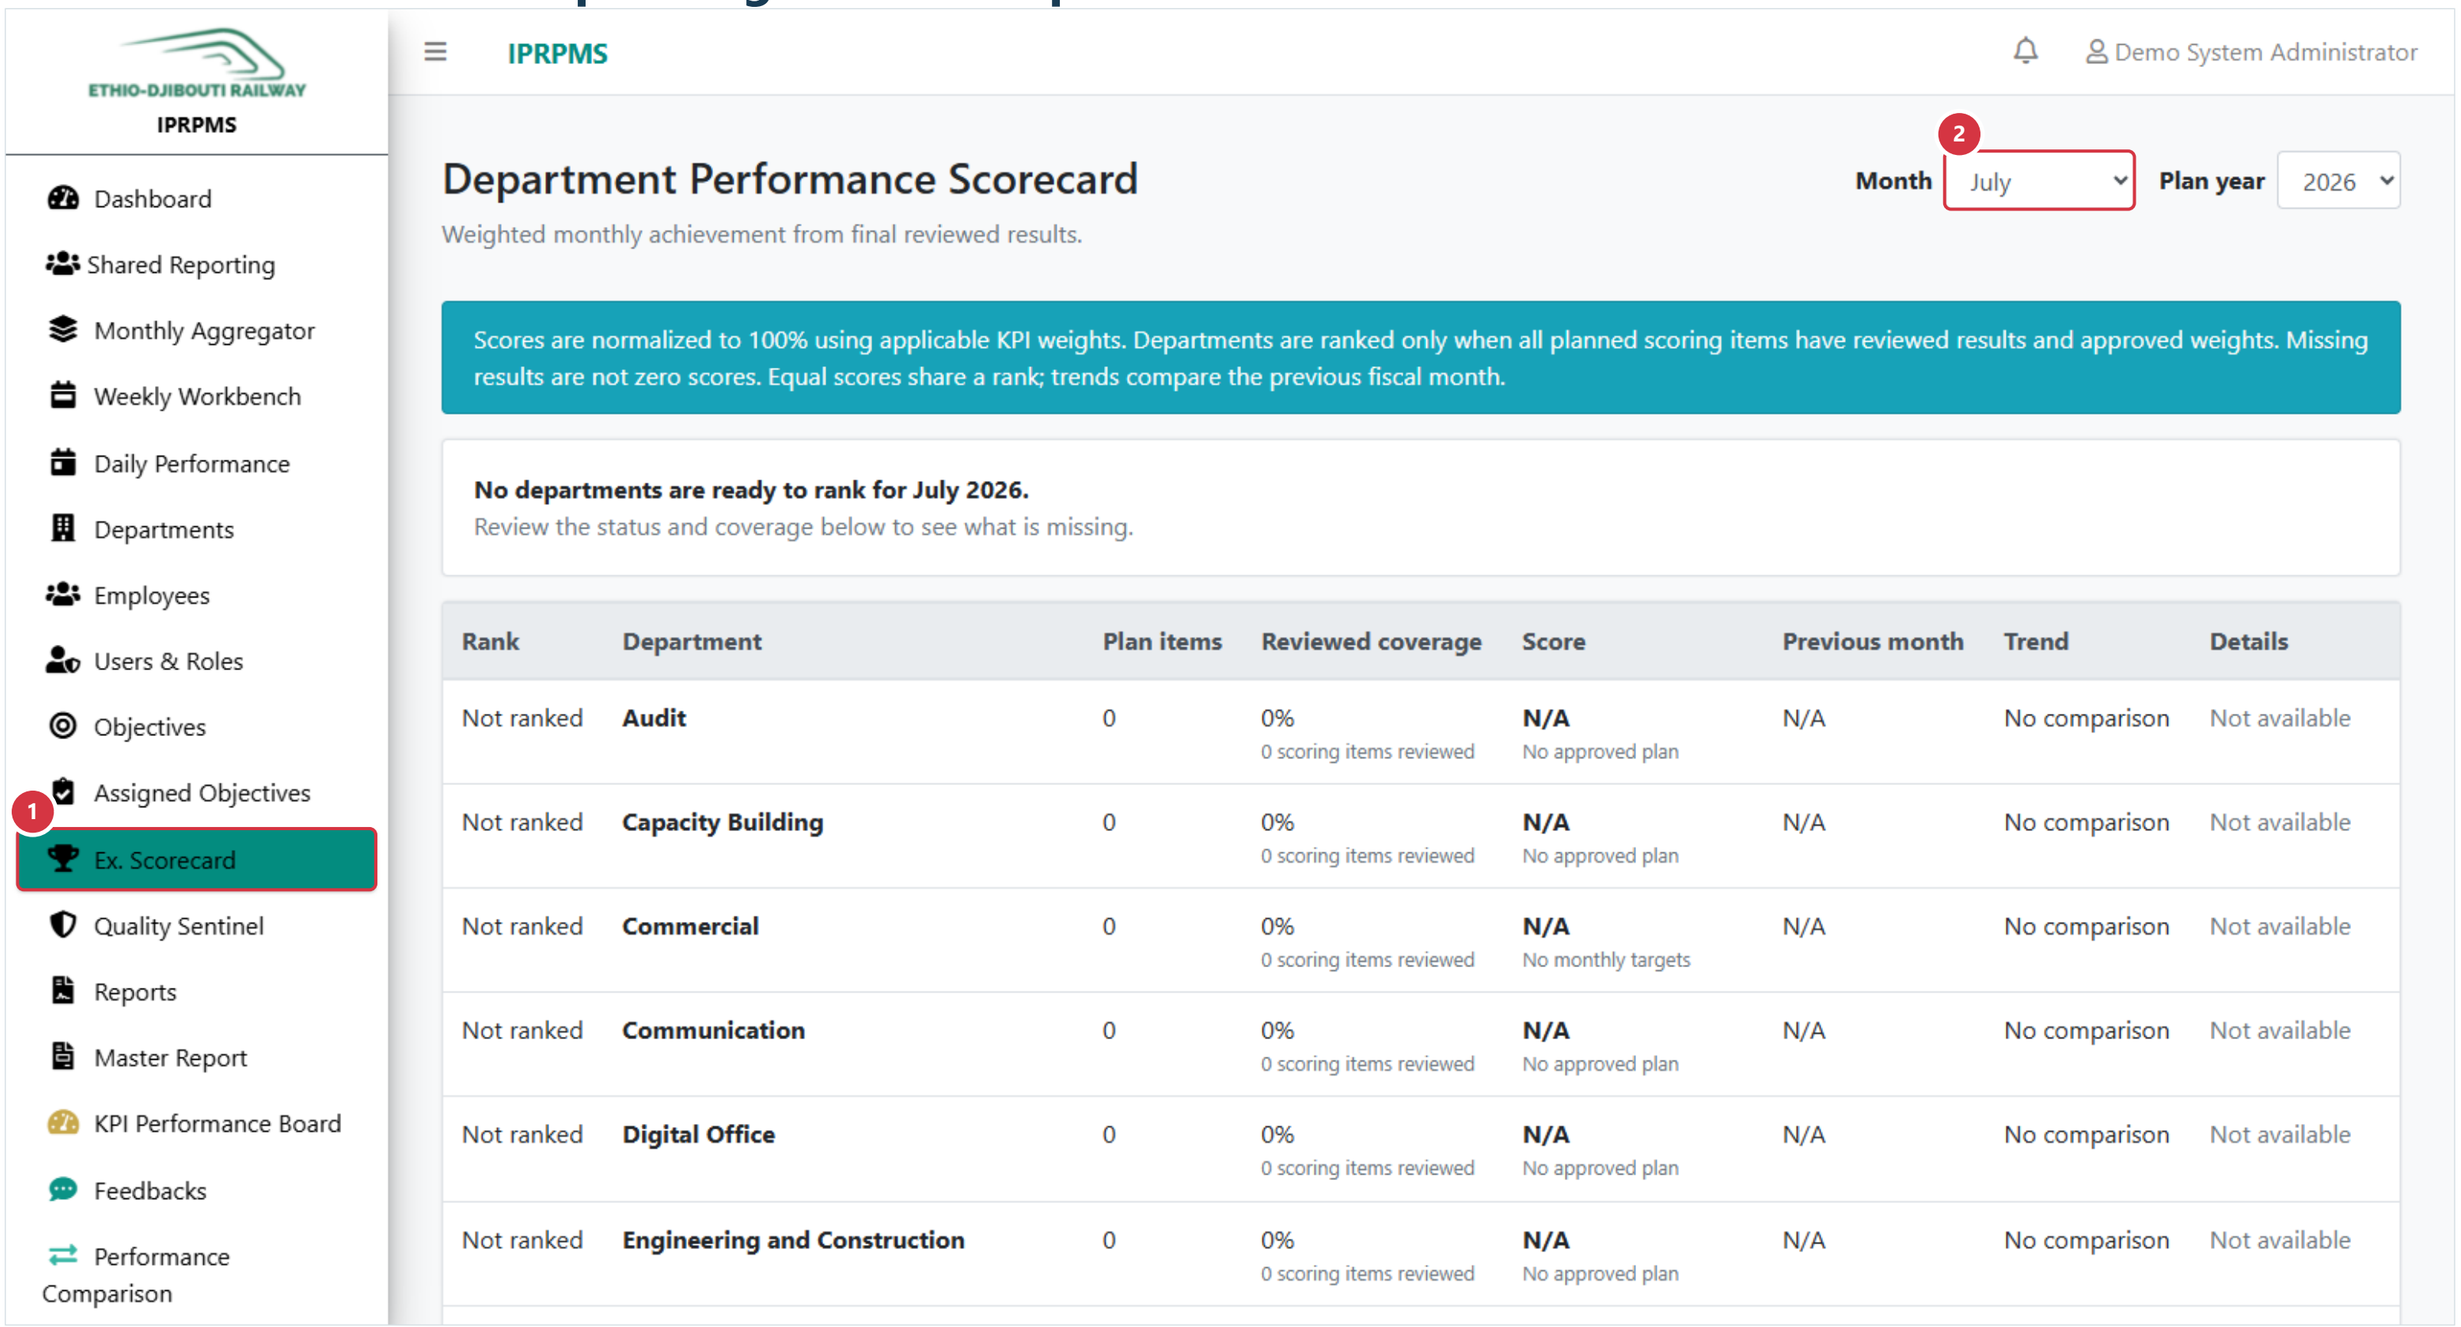

What to check

Open the finding and identify the responsible department or record. Confirm status and evidence before requesting a correction from its owner.

How you know it worked

Rescan after the responsible user resolves the underlying issue and verify that the finding reflects the corrected state.

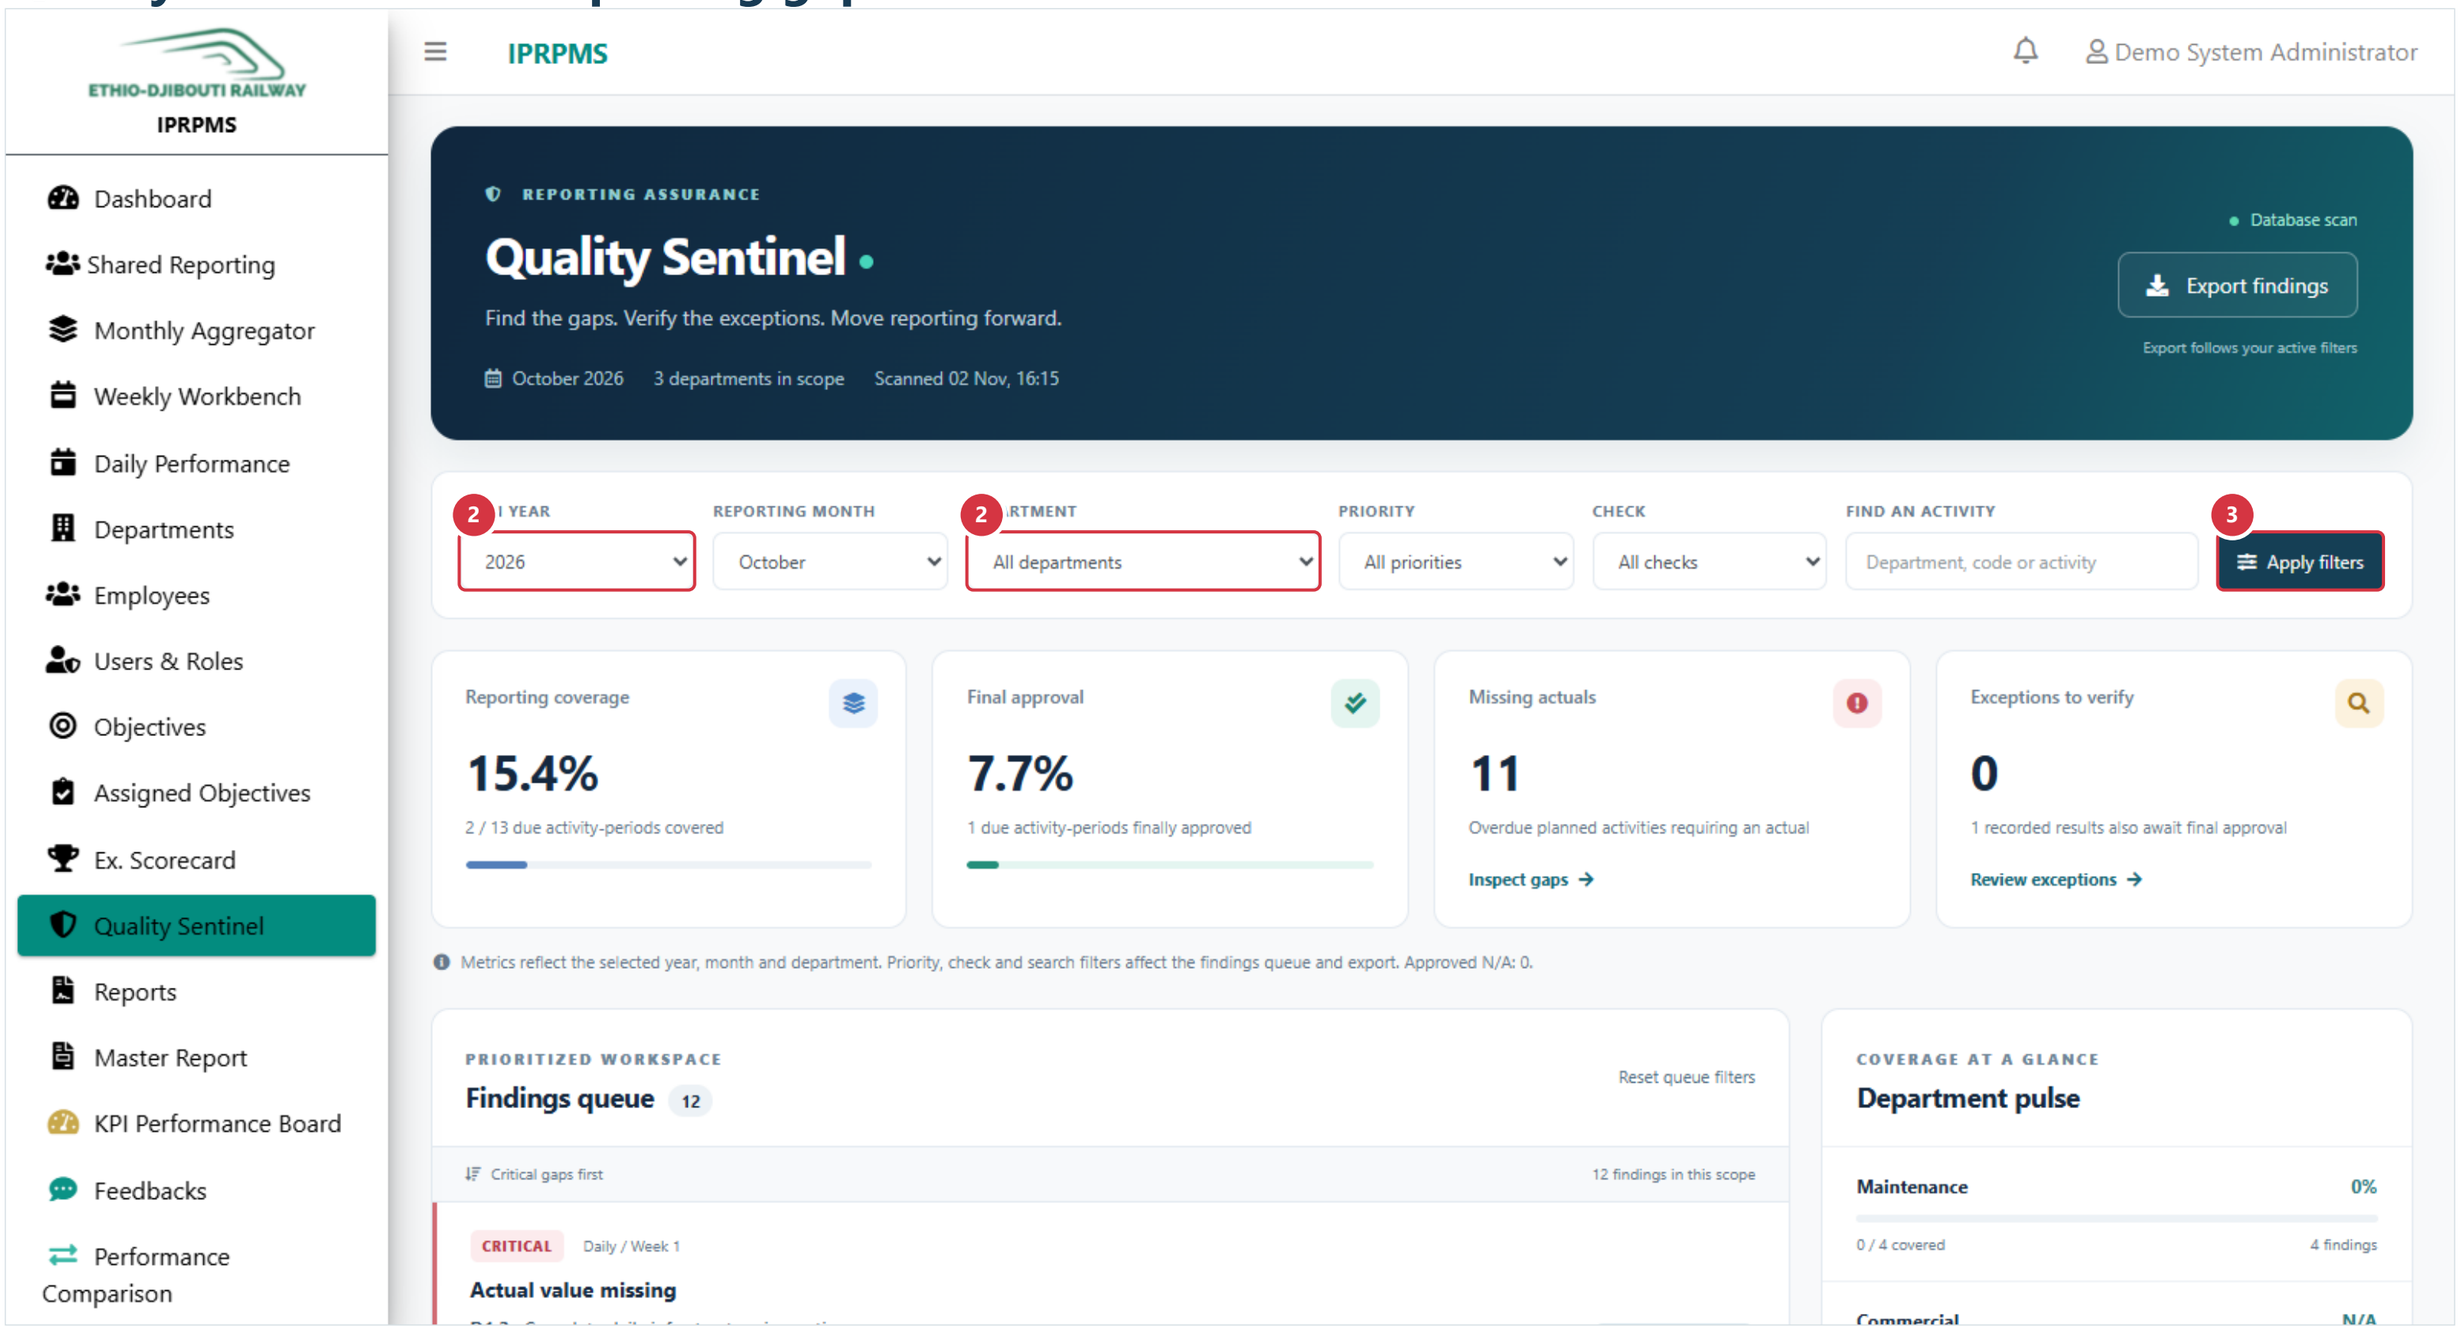

Executive Scorecard: inspect organizational performance

1. Open Ex. Scorecard.
2. Select the reporting filters shown.
3. Review department results and the performance band definitions.

After this step: Read the data status and weighting context before interpreting a score.

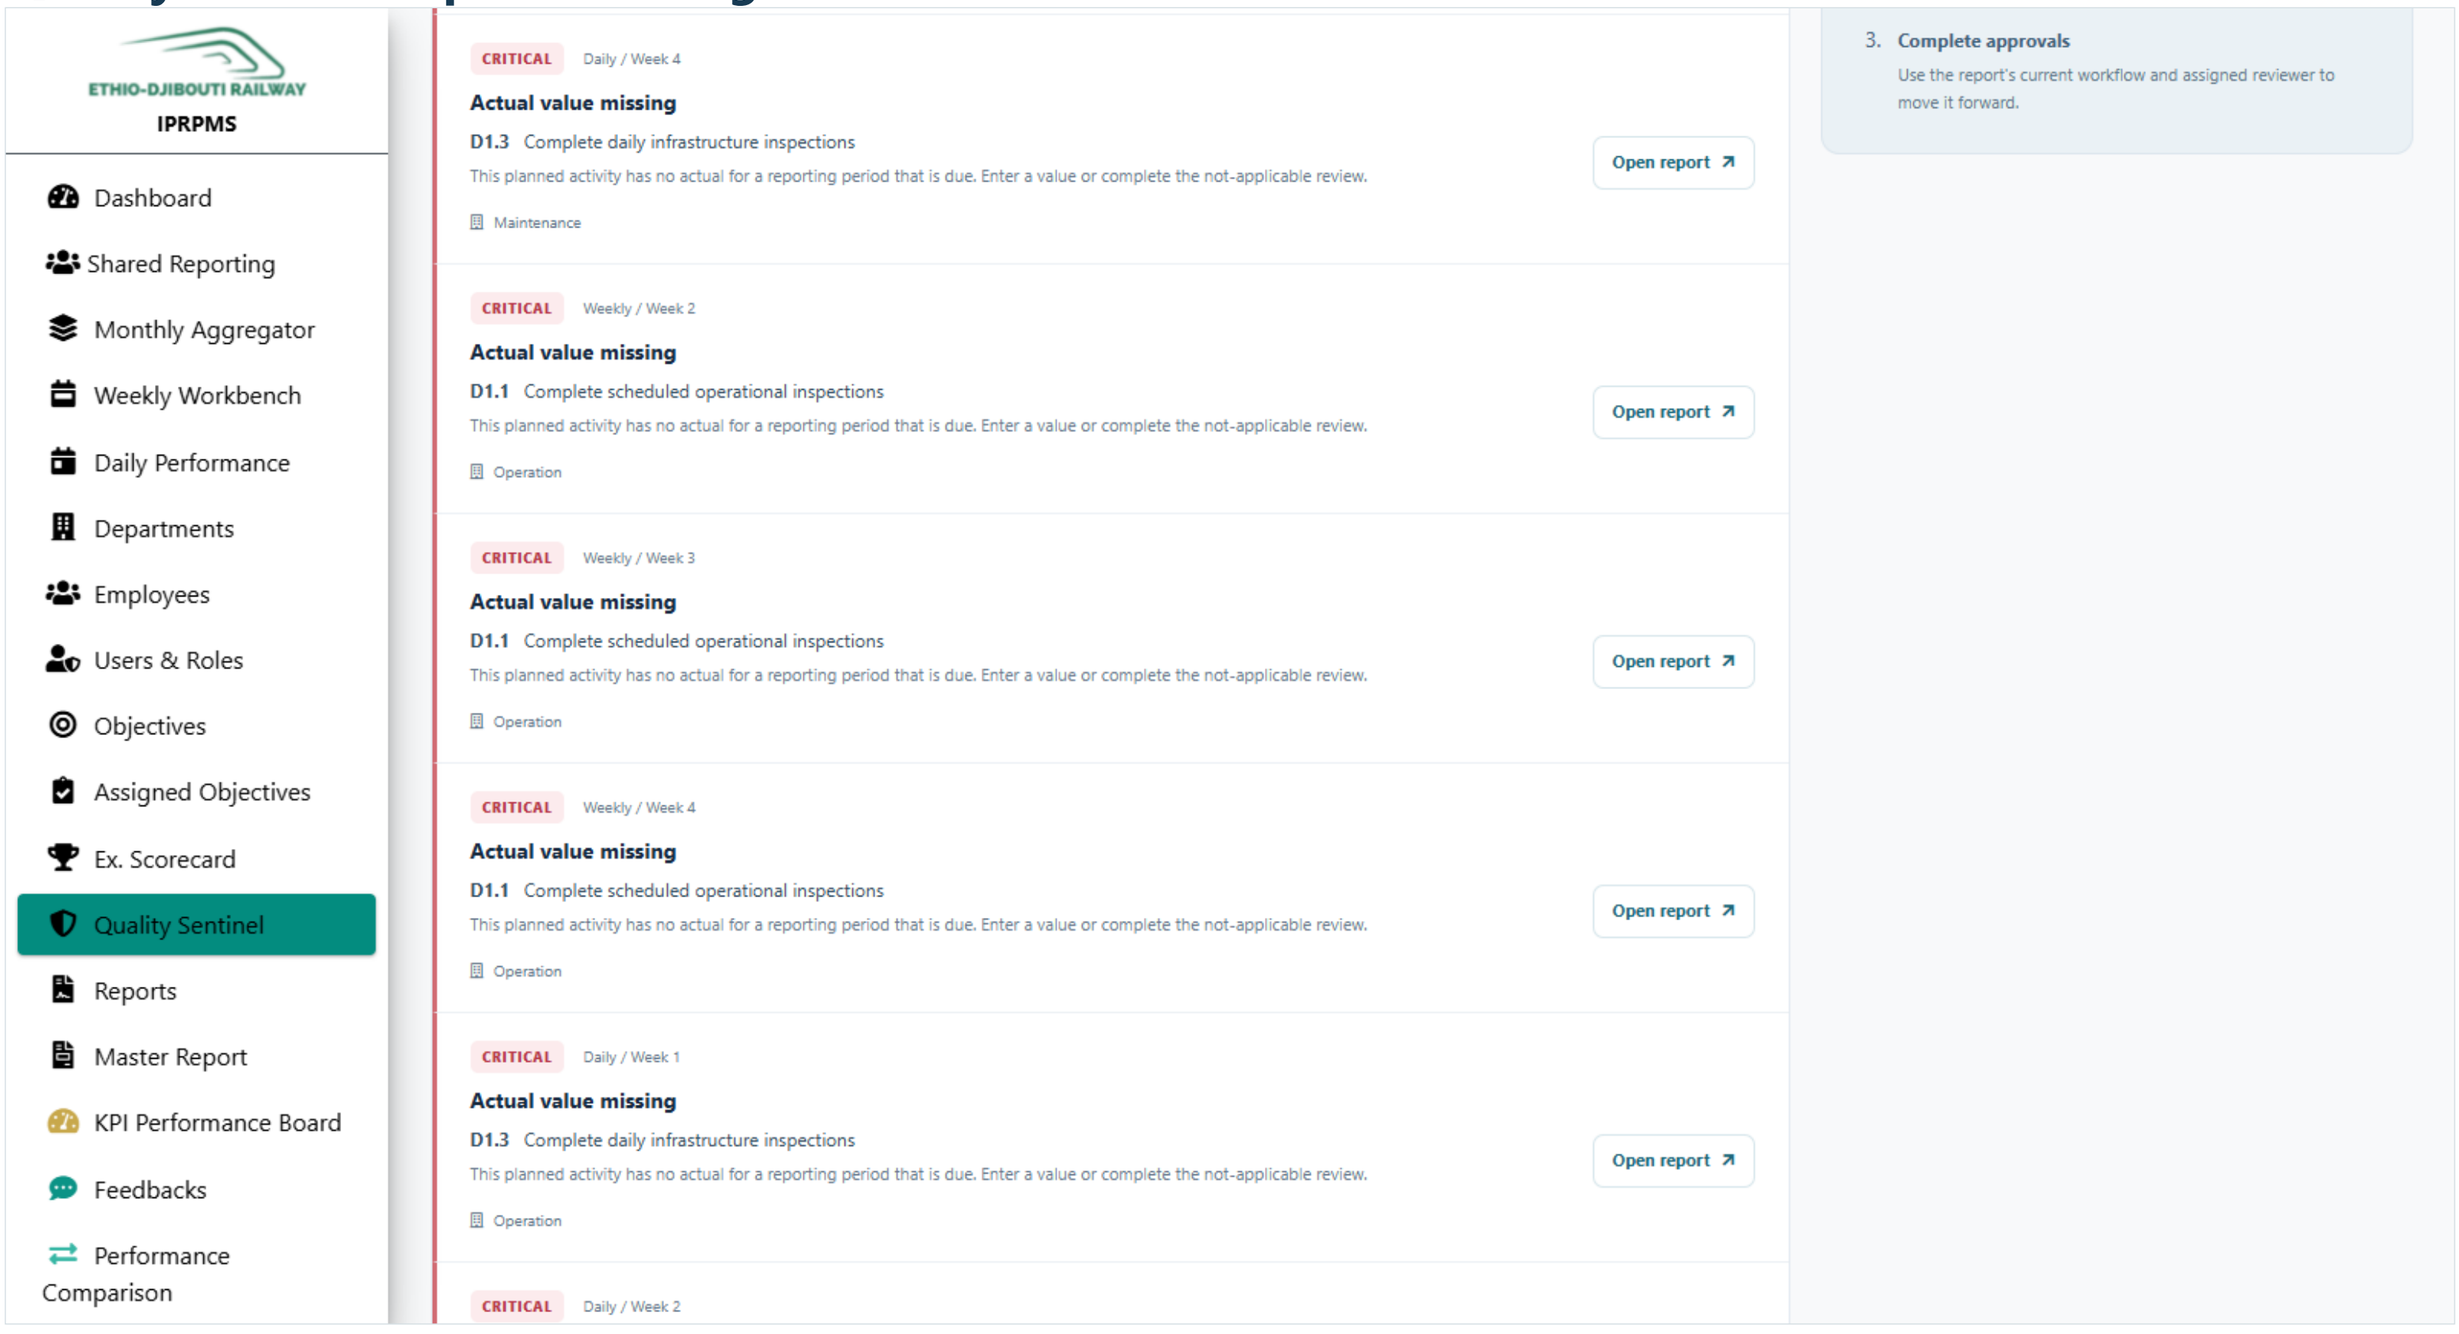

Quality Sentinel: filter reporting gaps

1. Open Quality Sentinel.
2. Set Plan year, Reporting month, Department and the desired priority/check.
3. Click Apply filters.

After this step: The scan is read-only. Critical missing actuals and unusual results identify records needing attention.

Quality Sentinel: open a finding and rescan

1. Read the activity code, issue, department and reporting period.
2. Use Open report to inspect the source record when a finding is available.
3. After a permitted correction, refresh the scan or apply filters again.

After this step: A high achievement value is a review signal, not an automatic correction or approval block.

Optional: project records when the workspace is enabled

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

The Project Registry tracks a project's scope, dates, budget and milestones. It is not the numeric departmental performance approval workflow.

Before you click

Use this section only if your administrator has enabled the project workspace and your account is permitted. In the inspected build, project routes rendered but the sidebar links were hidden.

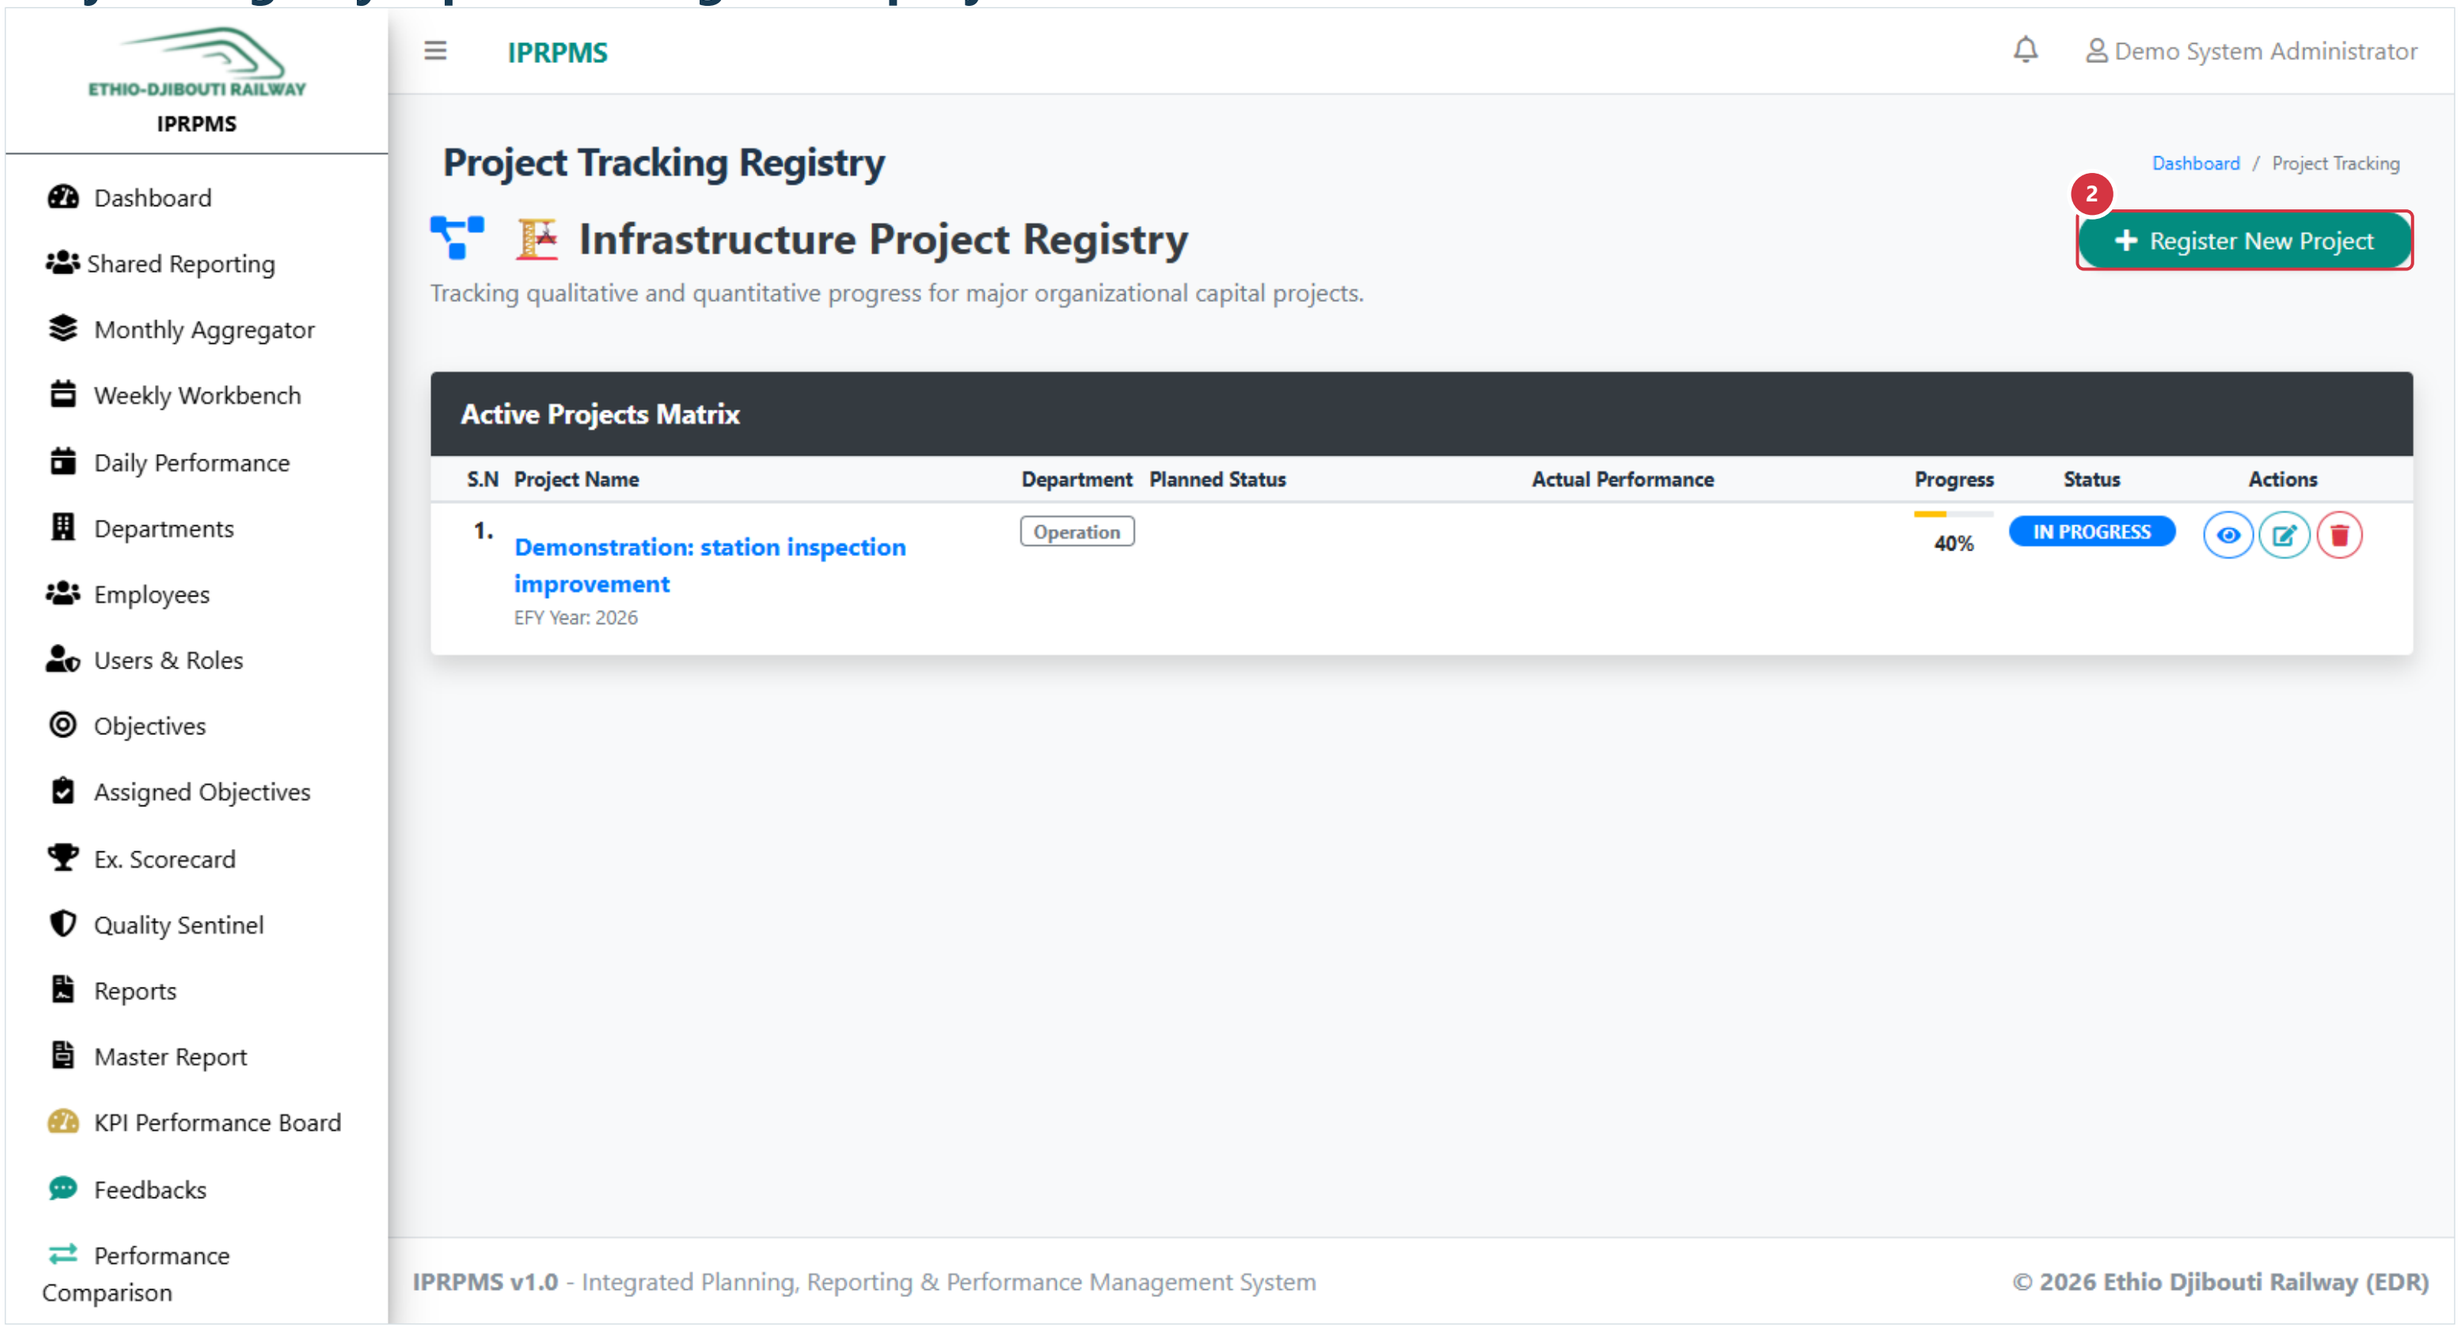

What to check

Check department, dates, budget and currency before saving. Keep milestone weights and completion evidence consistent. Do not assume a separate project approval chain exists when the screen does not offer one.

How you know it worked

The project record and its milestone progress can be reviewed in Project Report. If the menu is unavailable, ask the administrator; do not use another person's credentials.

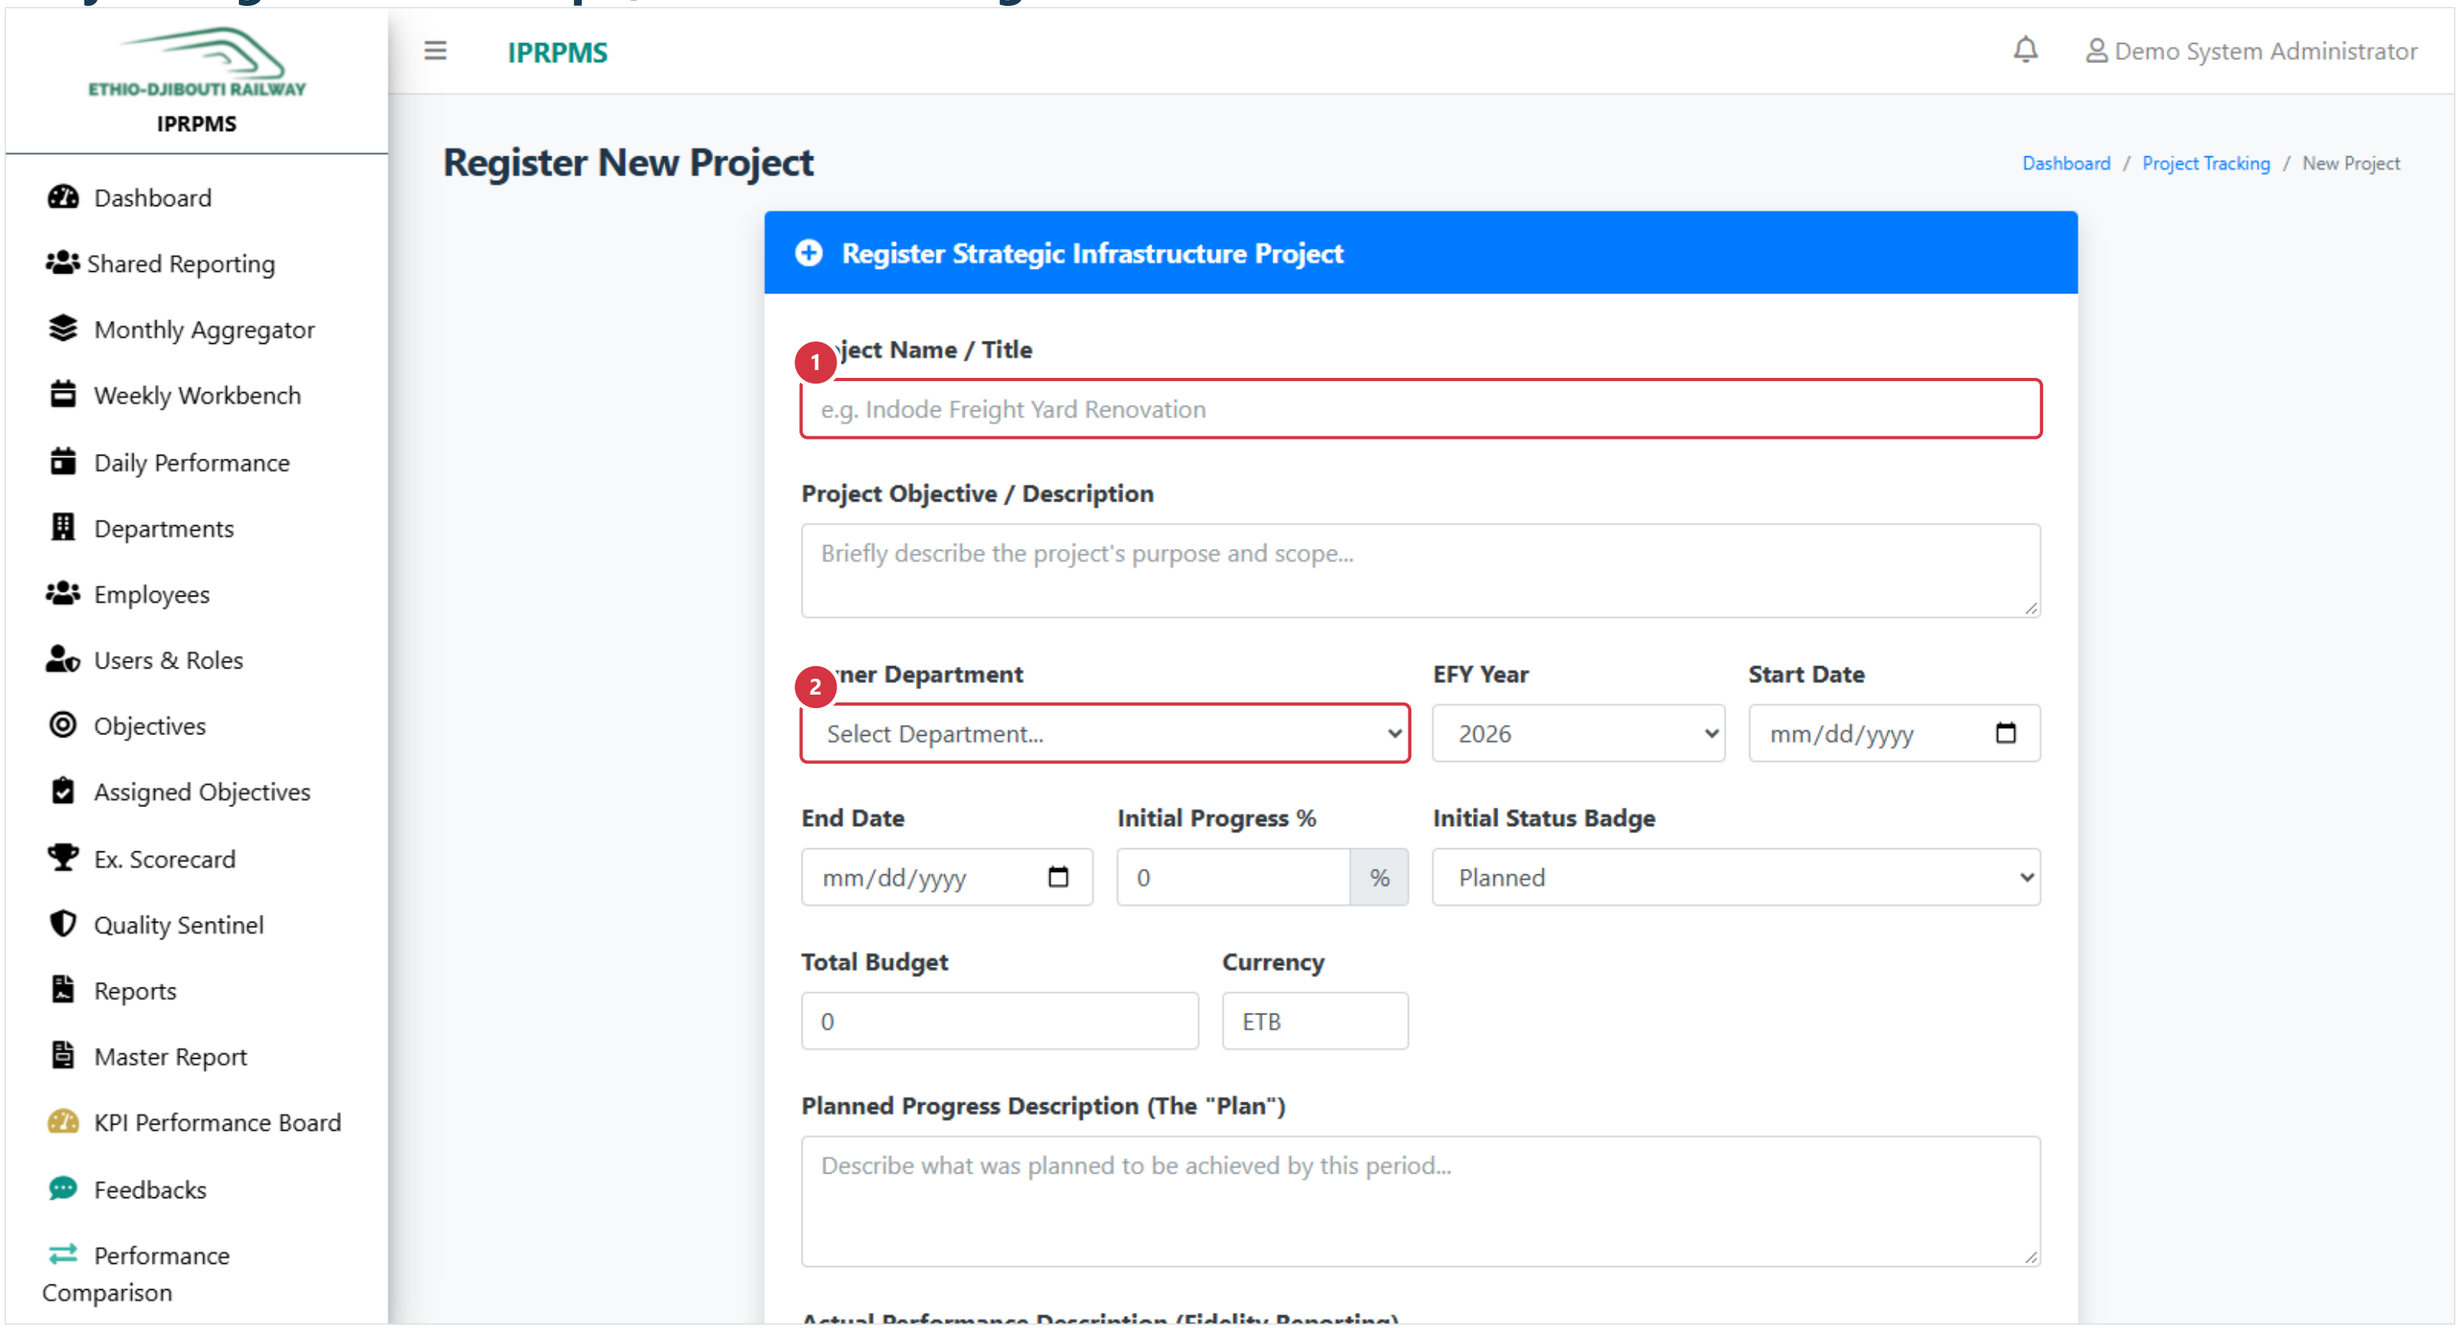

Project Registry: open and register a project

1. Open Project Registry.
2. Use the new-project action.
3. Select an existing project to inspect details and milestones.

After this step: Department and role permissions determine which project actions are available. Project menu links are hidden in the inspected sidebar; use the authorized project workspace when your administrator enables access.

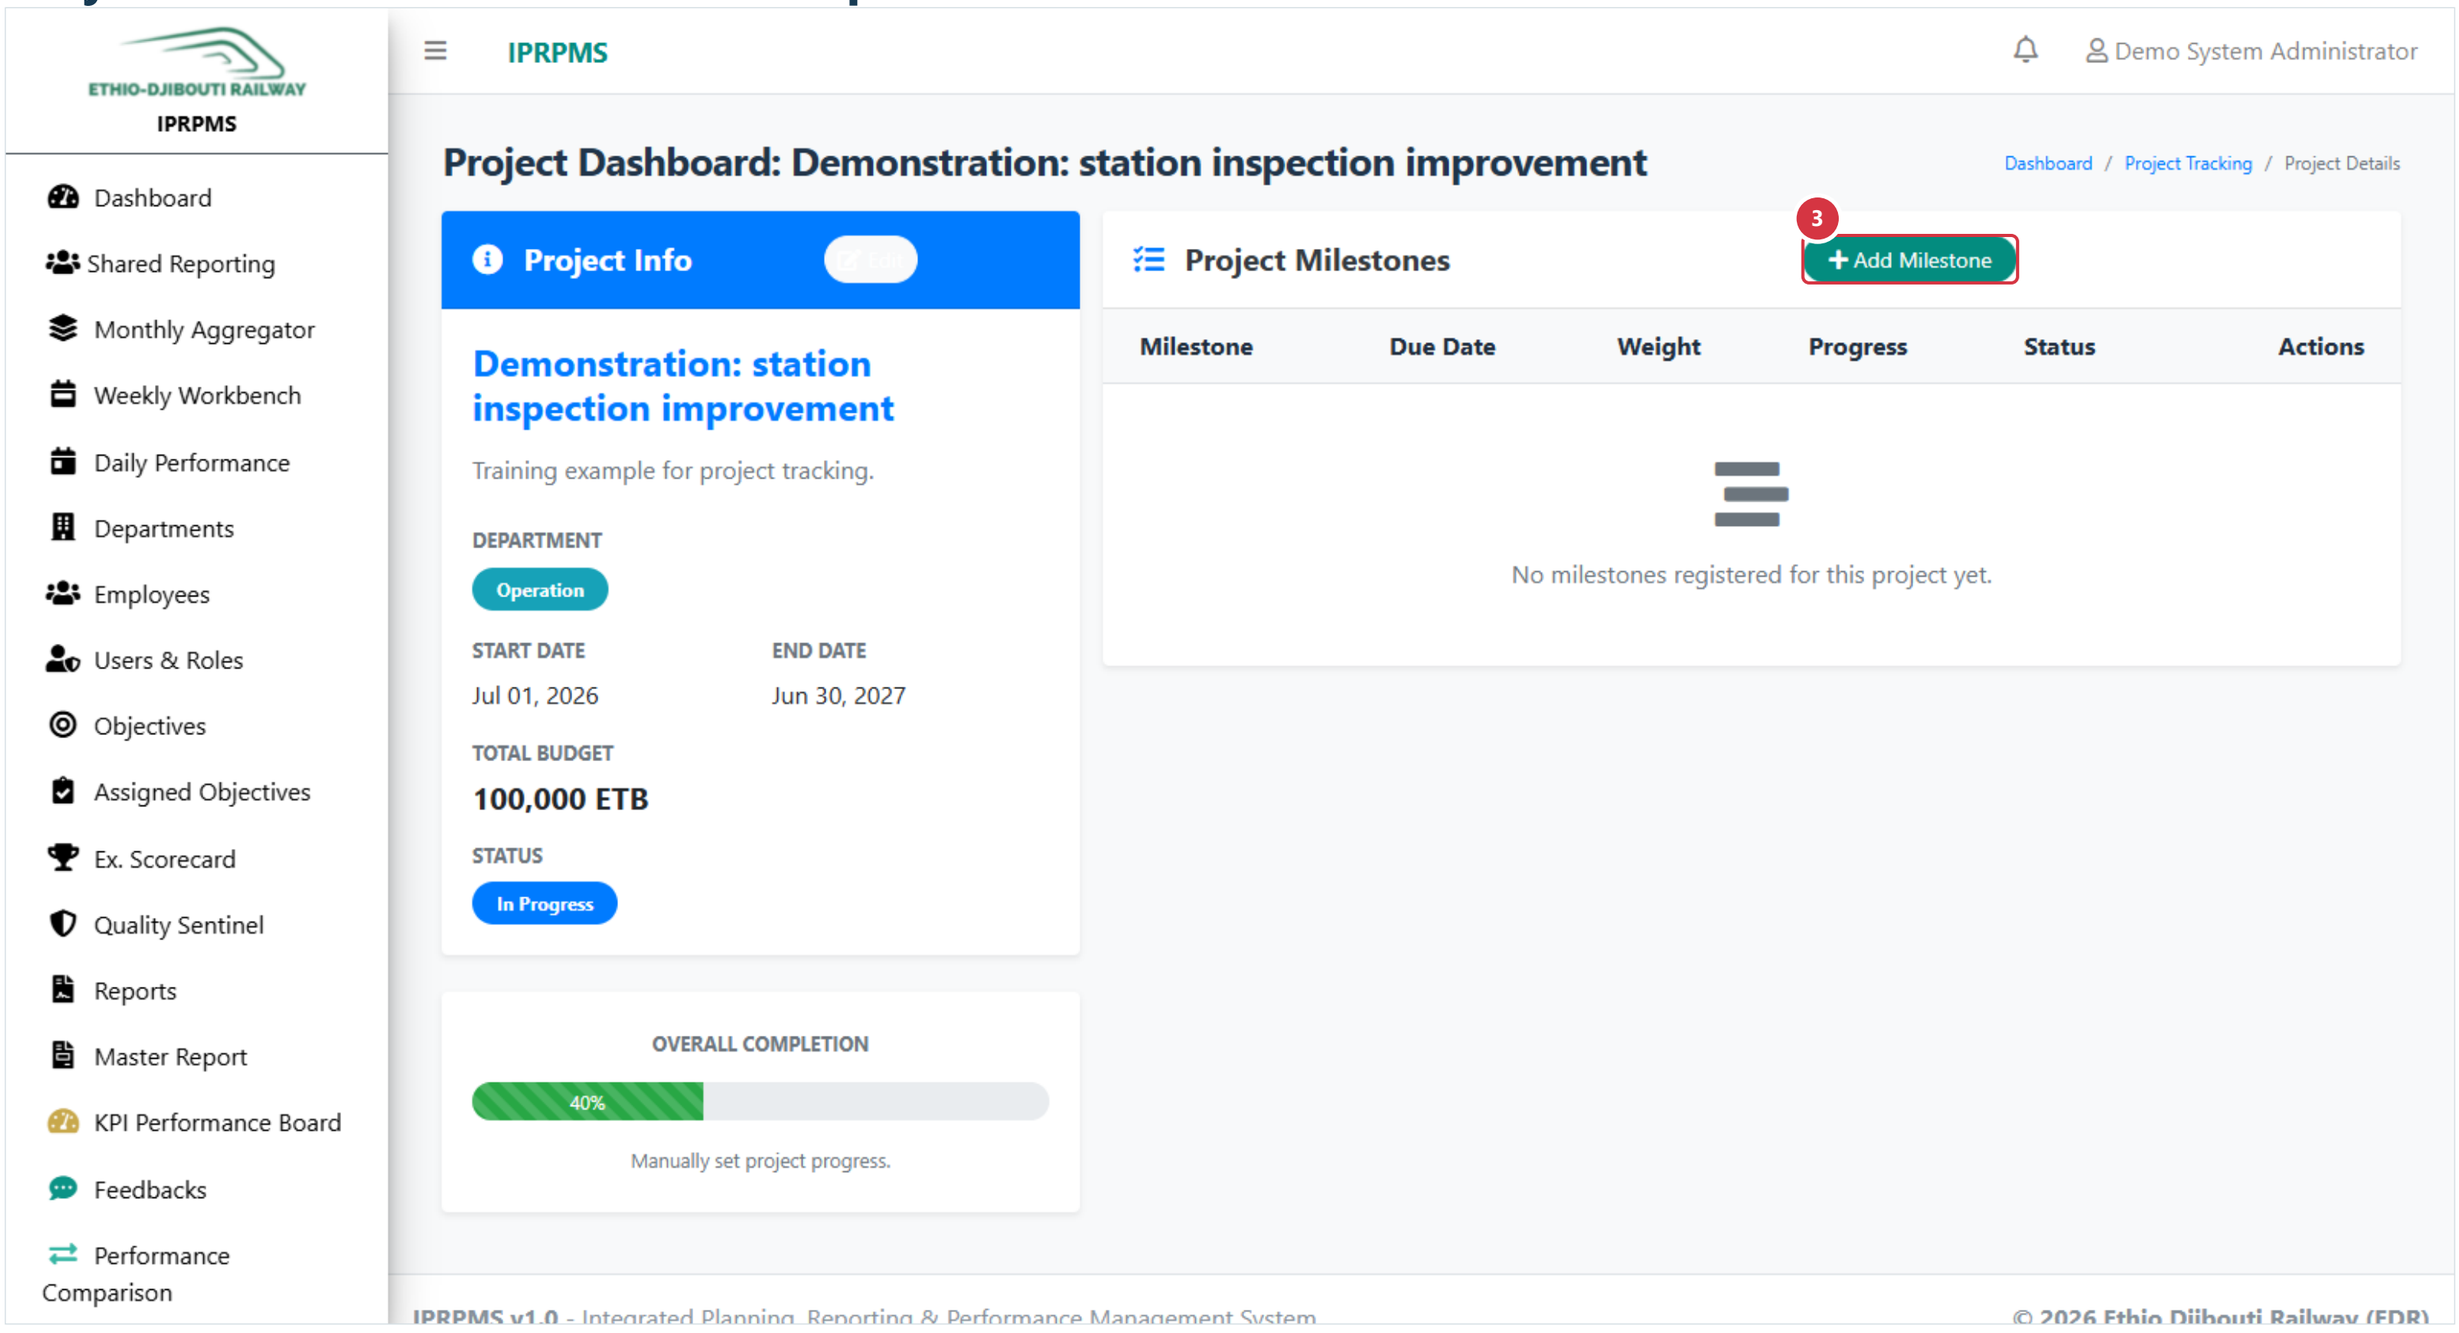

Project registration: scope, dates and budget

1. Enter the project name.
2. Select its department and complete the dates, budget and currency.
3. Review the description/progress fields, then click Register Project Record.

After this step: The project record appears in Project Registry after saving. Project menu links are hidden in the inspected sidebar; use the authorized project workspace when your administrator enables access.

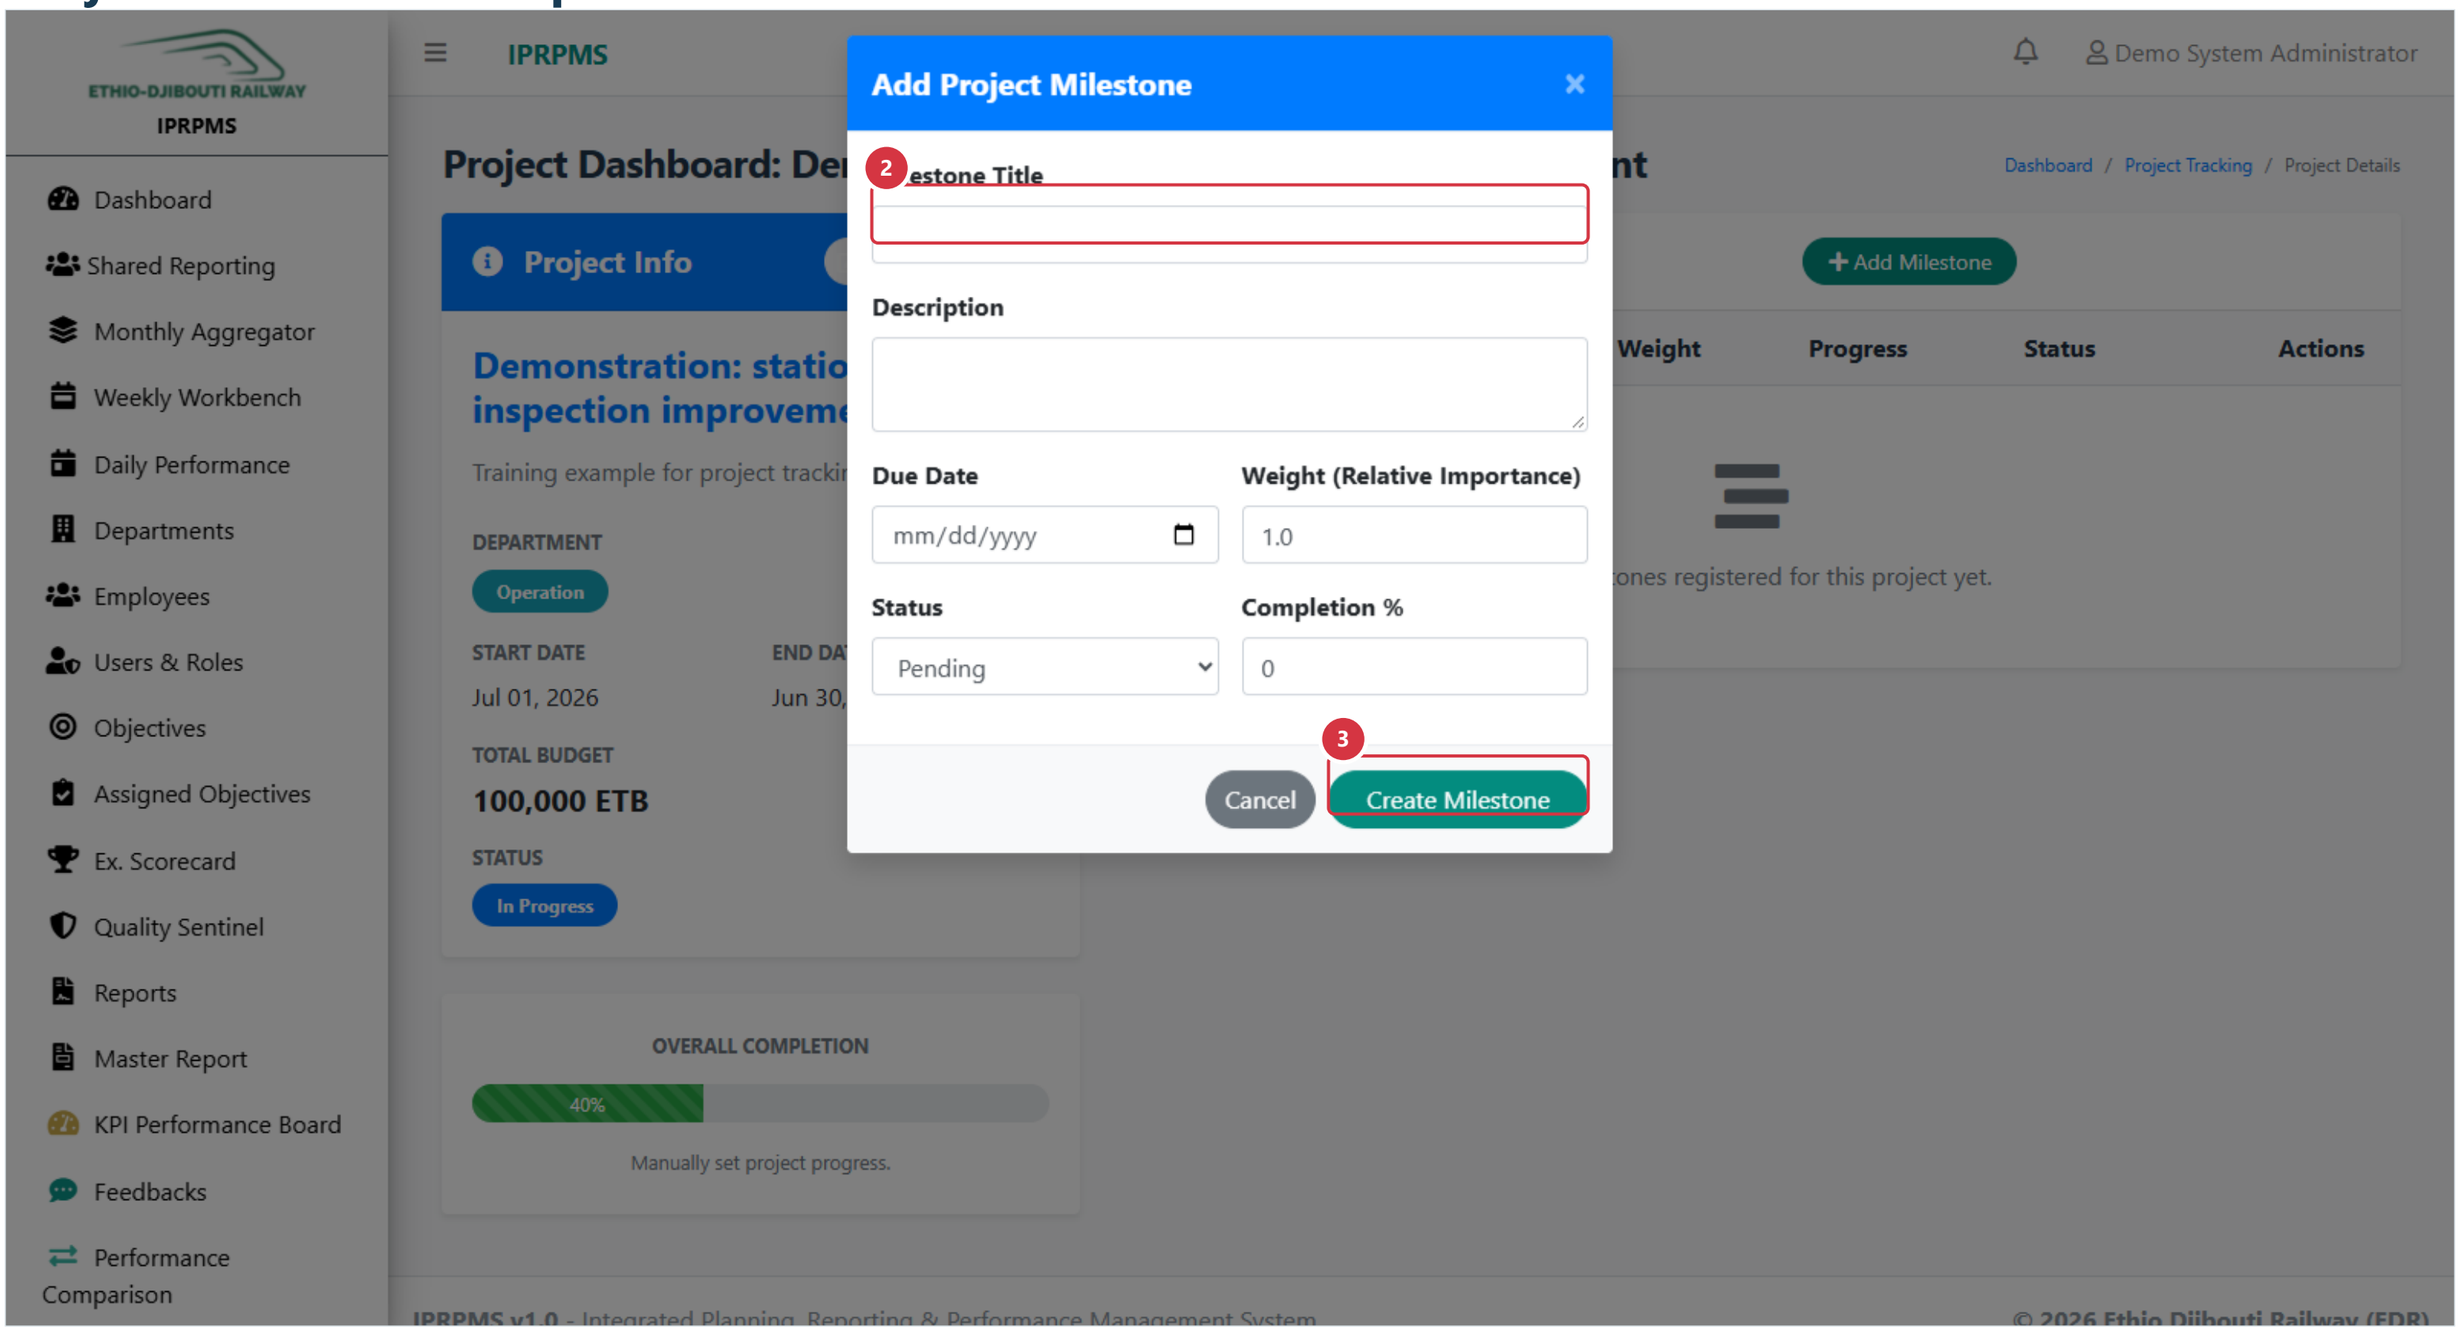

Project details: milestones and completion

1. Open the project details.
2. Review its dates, budget and completion percentage.
3. Click Add Milestone to create a measurable project deliverable.

After this step: Milestone weights and completion determine the project weighted completion when milestones exist. Project menu links are hidden in the inspected sidebar; use the authorized project workspace when your administrator enables access.

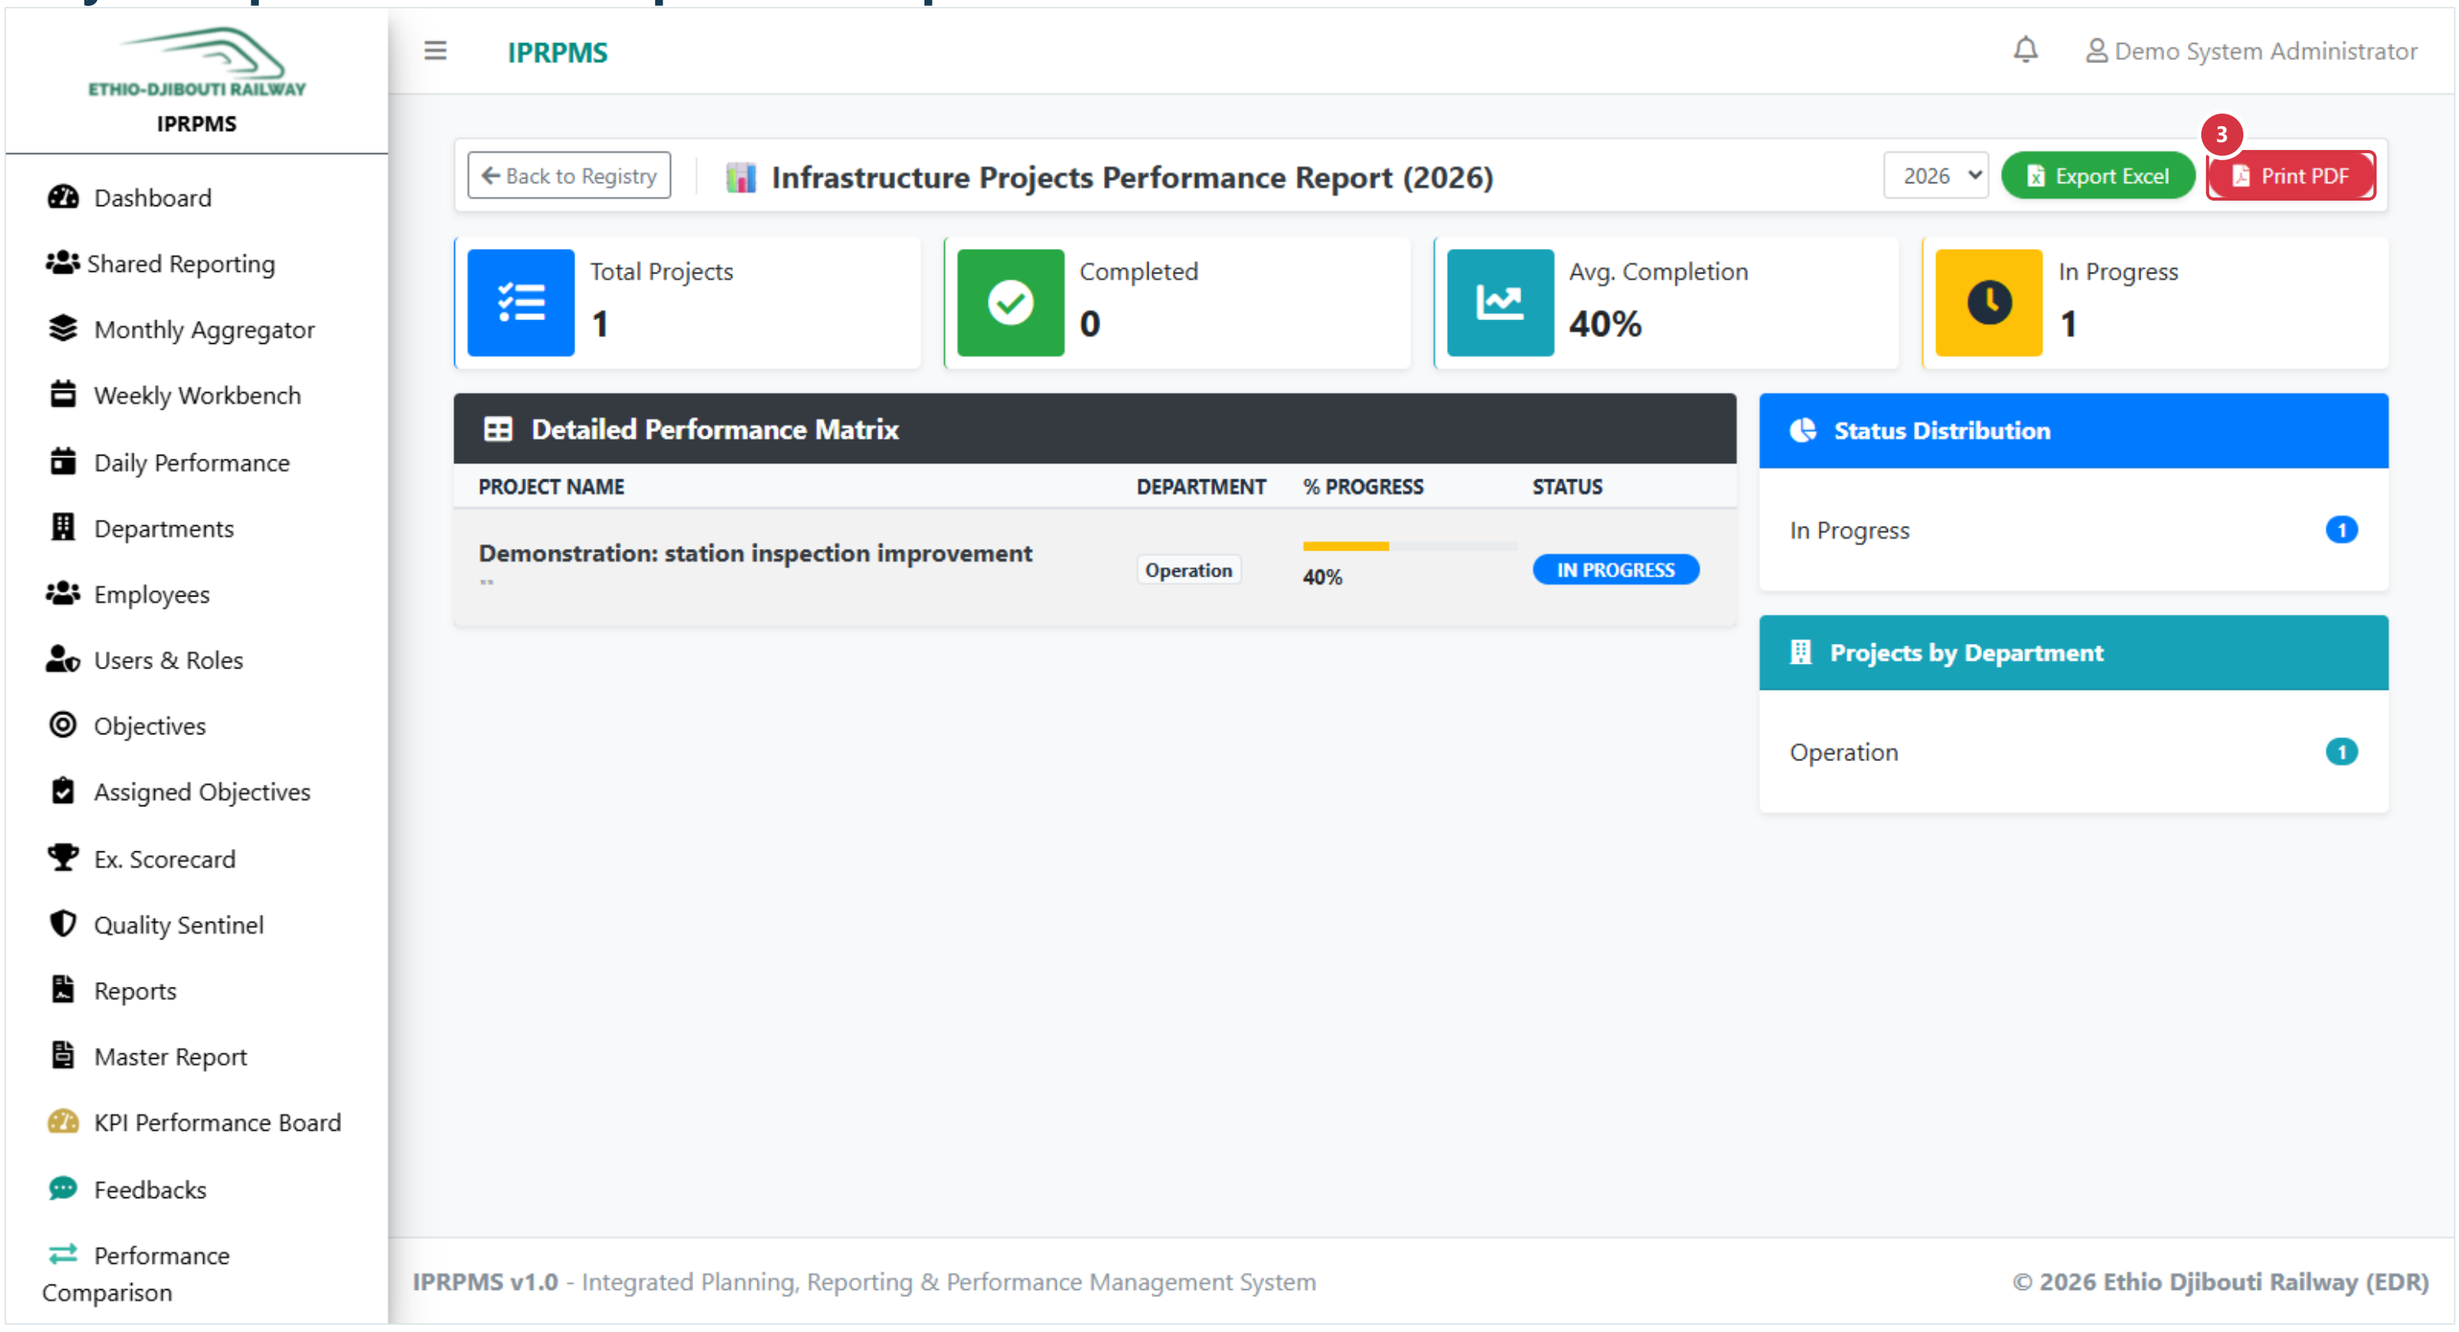

Project milestone: complete the milestone form

1. Click Add Milestone.
2. Enter the fields shown for the milestone and its weight/progress.
3. Click Create Milestone to save it.

After this step: Use the milestone edit control for later progress changes. Check dates and weights before saving. Project menu links are hidden in the inspected sidebar; use the authorized project workspace when your administrator enables access.

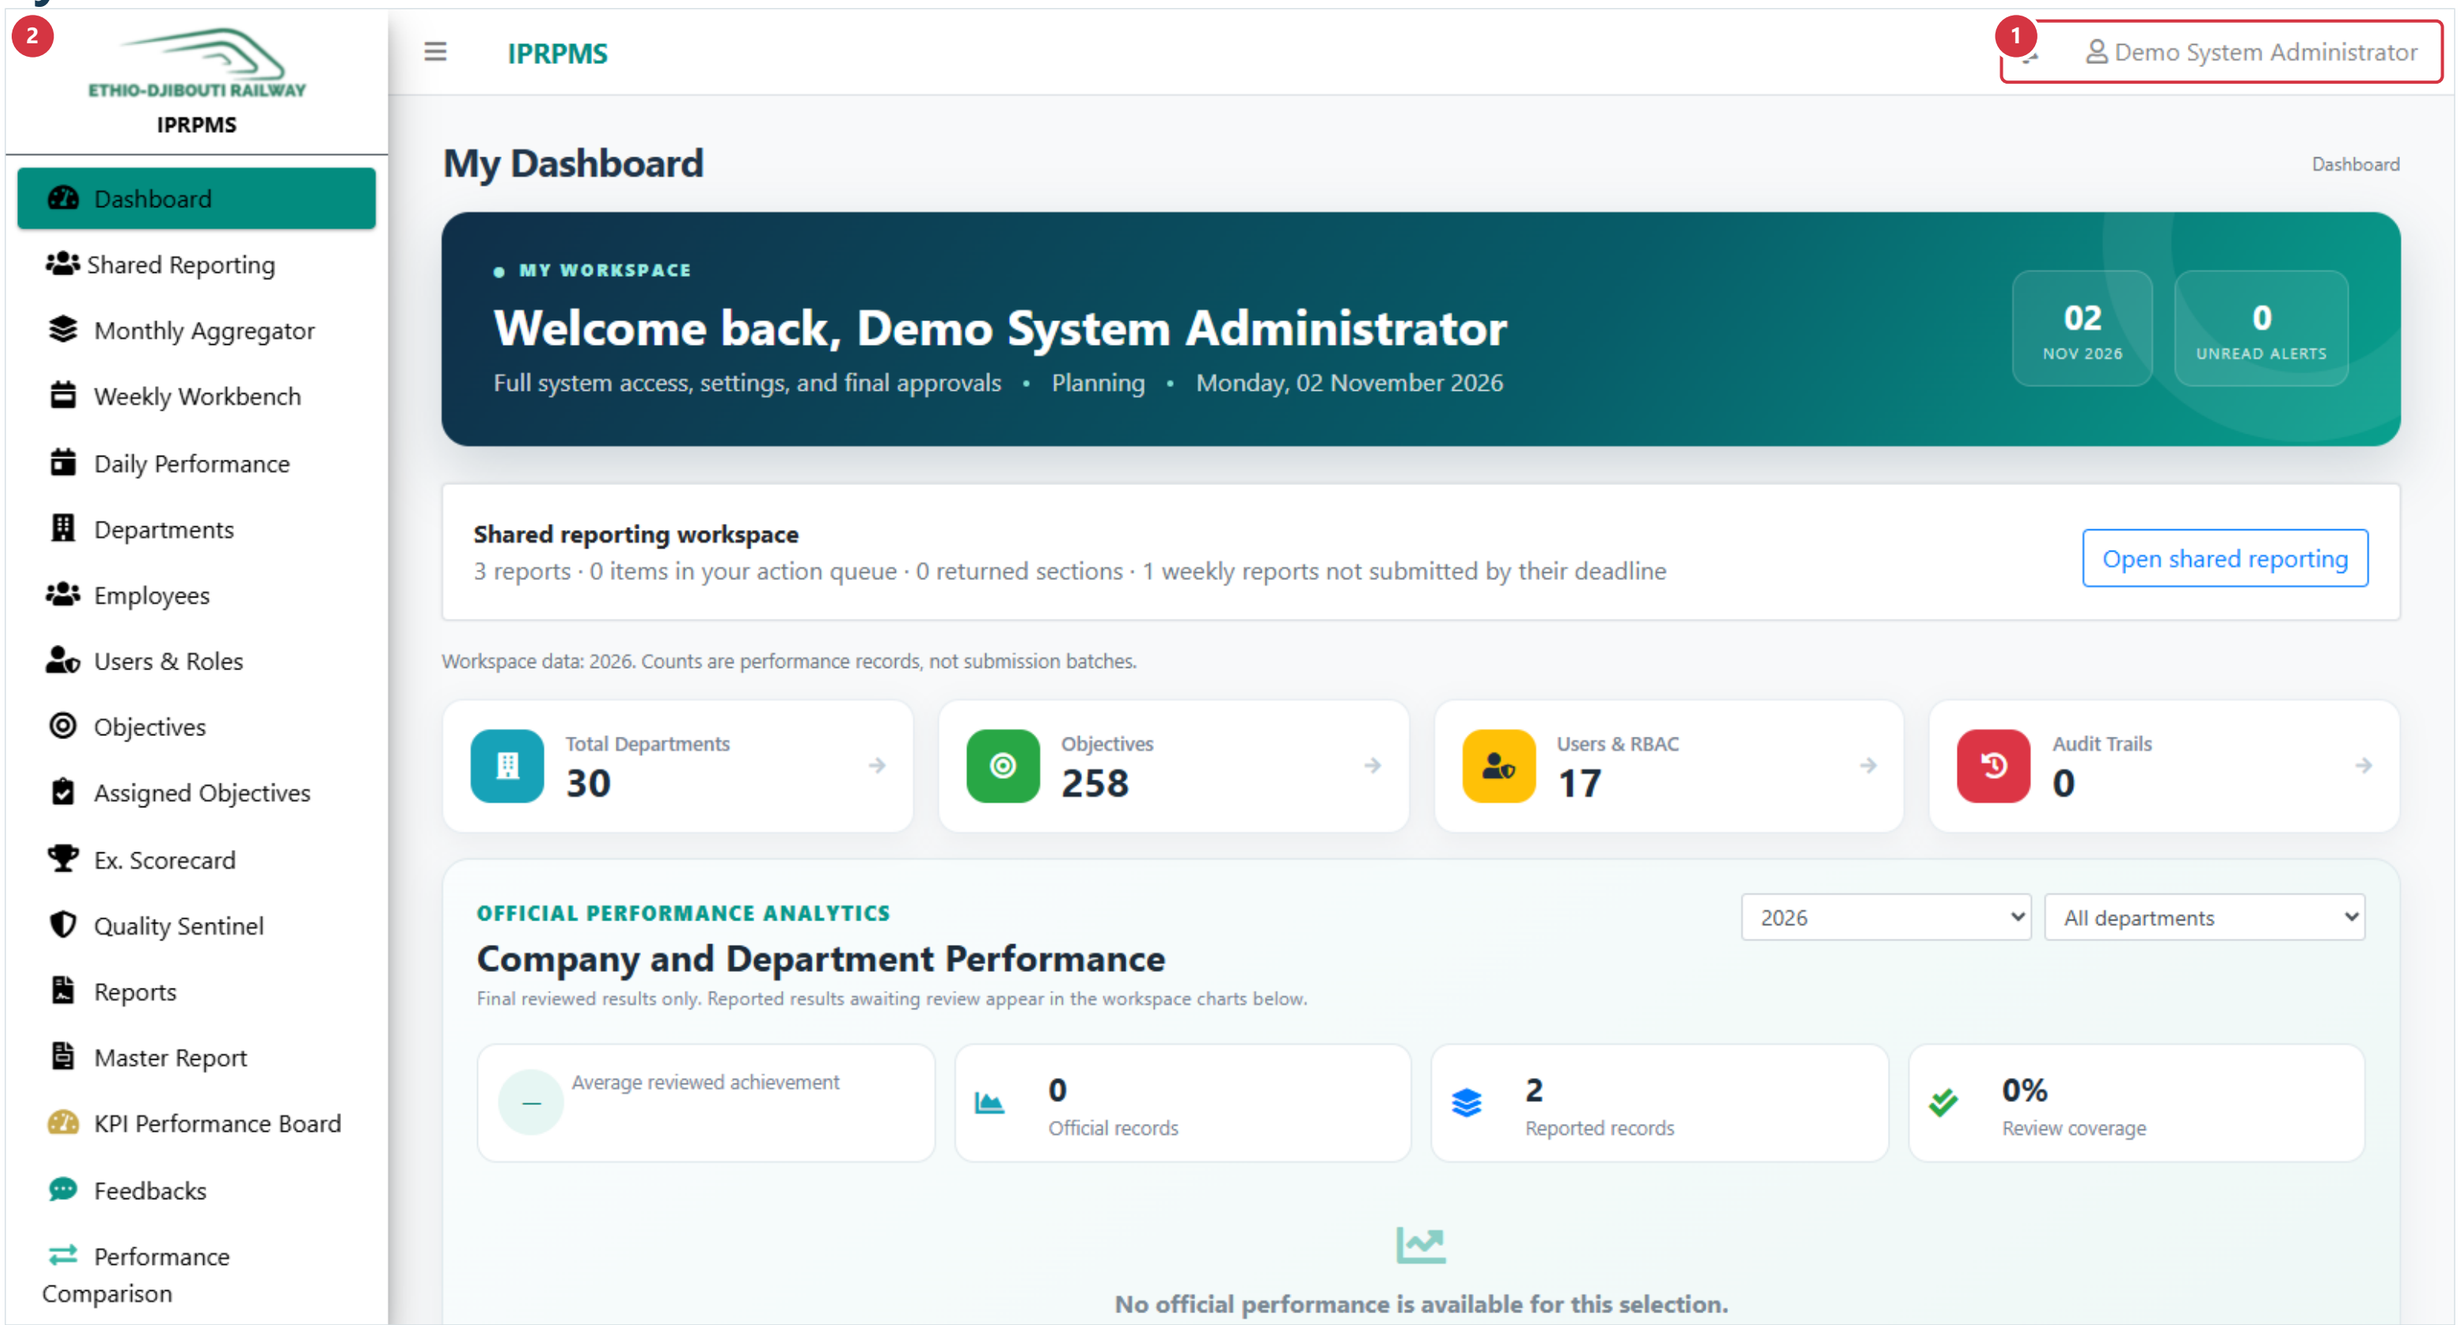

Project Report: review and print the report

1. Open Project Report.
2. Review the project scope and progress in the table.
3. Use Print PDF or the available export control.

After this step: Verify the filter scope before printing. This workflow does not require an invented project-approval stage. Project menu links are hidden in the inspected sidebar; use the authorized project workspace when your administrator enables access.

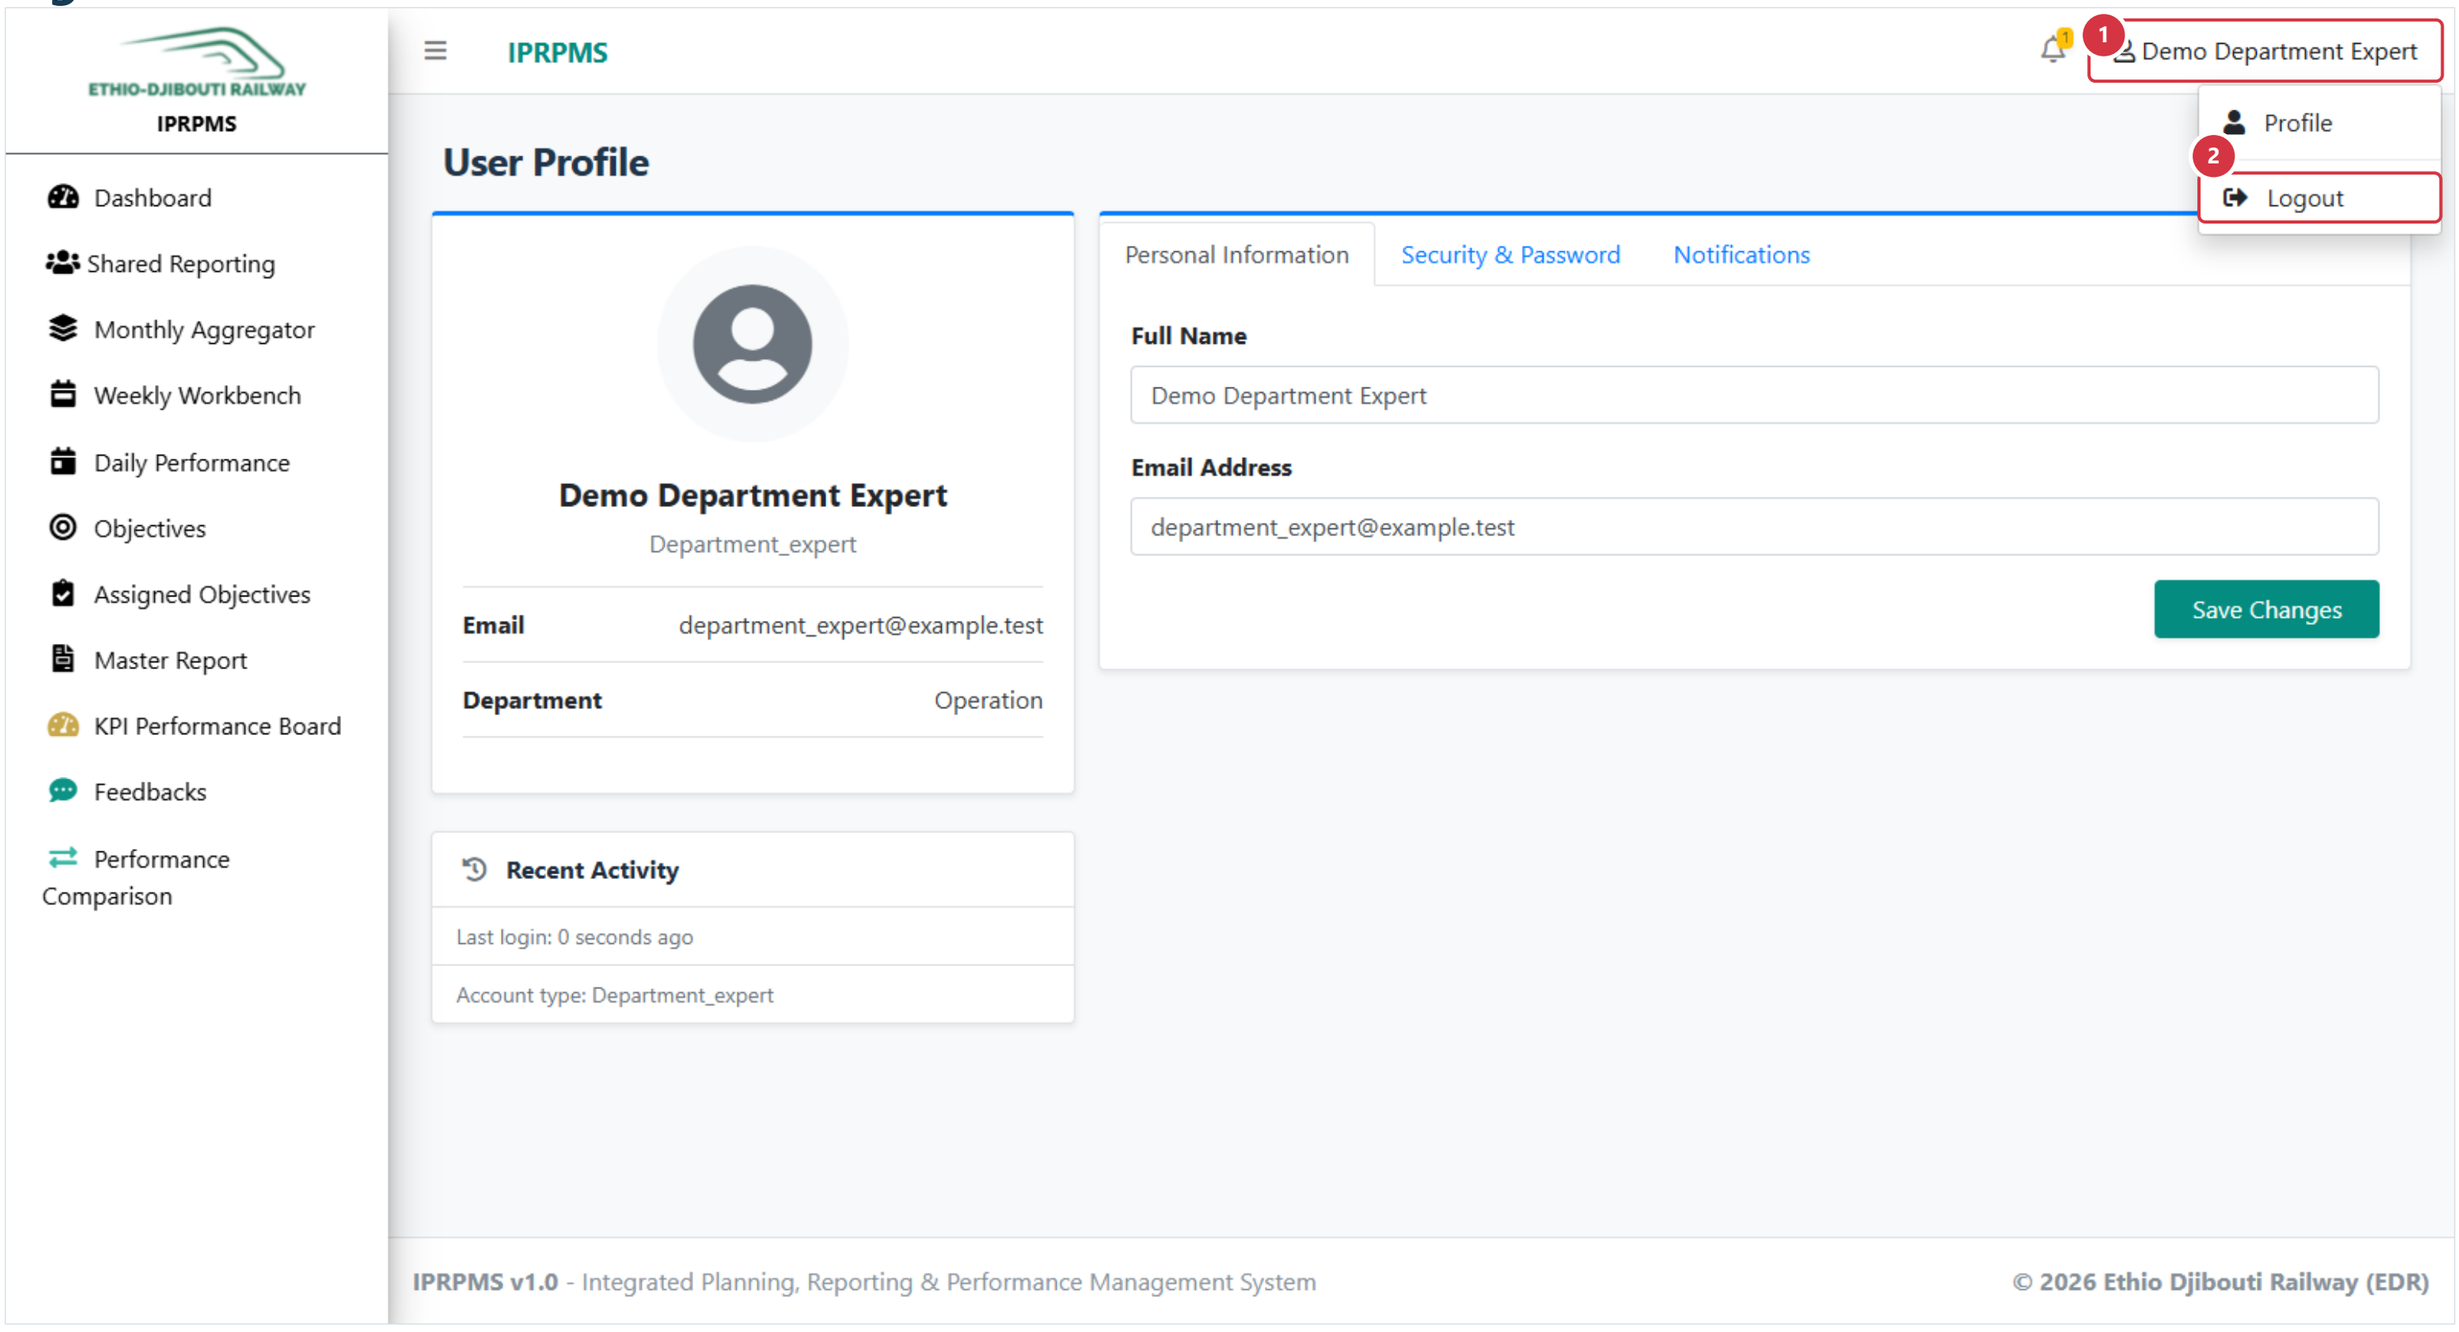

System Administrator: home screen

1. Confirm your signed-in role at the top right.
2. Manage users, roles, activity, organization structure, branding and approved settings.
3. Verify user departments and role badges. Use audit records to investigate issues and the relevant workflow controls for authorized actions.

After this step: Menus vary by permission, department and reporting frequency.

Sign out on a shared device

1. Click your name at the top right to open the user menu.
2. Click Logout after you finish your work.

After this step: The application returns to the sign-in screen after logout.

Before you finish, check these four things

Finish means your part is complete and you know who has the next action. It does not always mean the whole record is finally approved.

Your completion checklist

1. The user belongs to the right department and has the intended role badges. 2. Existing passwords were preserved unless a reset was requested. 3. Active account status and employee status were checked separately. 4. I did not bypass review by granting an unnecessary role.

If a menu or button is missing

Known inspected-build issues: My Tasks and task-detail pages returned application errors; project sidebar links were hidden. Treat these as application availability issues, not missing-password or role problems.

Ask for help with useful details

Give IT or the responsible reviewer the module, department, year, reporting period, objective or record reference and exact message. Include a safe screenshot. Never send your password.

Keep the process and data safe

Use your own account, save before sending, read return comments and keep the same record for corrections. Demonstration screenshots are teaching examples, not official performance figures. The separate logistics Import/Export module is excluded.
