HR Manager

Your responsibilities, complete workflow, exact clicks and return paths.

Read first: the Start Here guide explains how the whole system works. Then use this manual to do your part, check the outcome and hand work to the right person.

Understand your job before the buttons

Keep this page in mind whenever you receive a new record. It explains your responsibility and where your part stops.

Your job

Maintain accurate employee profiles and account links within your permitted HR scope, and read authorized employee or institutional performance information.

What you receive

Approved personnel information, department and supervisor details, employment changes and account-creation authorizations.

Who receives your work

Correct personnel records and authorized employee-account links; department structure or user-role changes go to the System Administrator.

Your limits and important distinctions

HR employee management is not department-structure administration. An employee record is not automatically an active login with the correct roles.

Your workflow, from first action to finish

Read down the page. Each step has an outcome; do not jump ahead simply because a button is visible.

1

Find the employee first

Search the employee list and avoid creating a duplicate for an existing person.

2

Check approved identity and employment details

Confirm department, supervisor, hire and employment information against the authorized personnel source.

3

Create or edit the personnel record

Save the correct values and reopen the employee profile to verify them.

4

Use the template for a register upload

Check the prepared file for required fields, department matches and duplicates before importing.

5

Handle authorized account creation

Use permitted employee-account controls and have the administrator confirm department, role and active account state.

6

Review and follow up

Read authorized employee or organization performance in its proper scope. Send access or workflow changes to the role that owns them.

Find the task you need

Use the page number or click a task name in the PDF. Section introductions explain the purpose before the screen-by-screen actions.

First access and everyday account safety 5

Create and maintain employee profiles 11

Completion checklist and help 17

First access and everyday account safety

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Use your own account. Your department and role decide what you can see and which decisions you can make. Never use somebody else's account to reach a missing button.

Before you click

Have your official account details ready. Open the address supplied by IT, enter your email and Access Key, then click Authenticate. A first-password screen appears only when your account requires it.

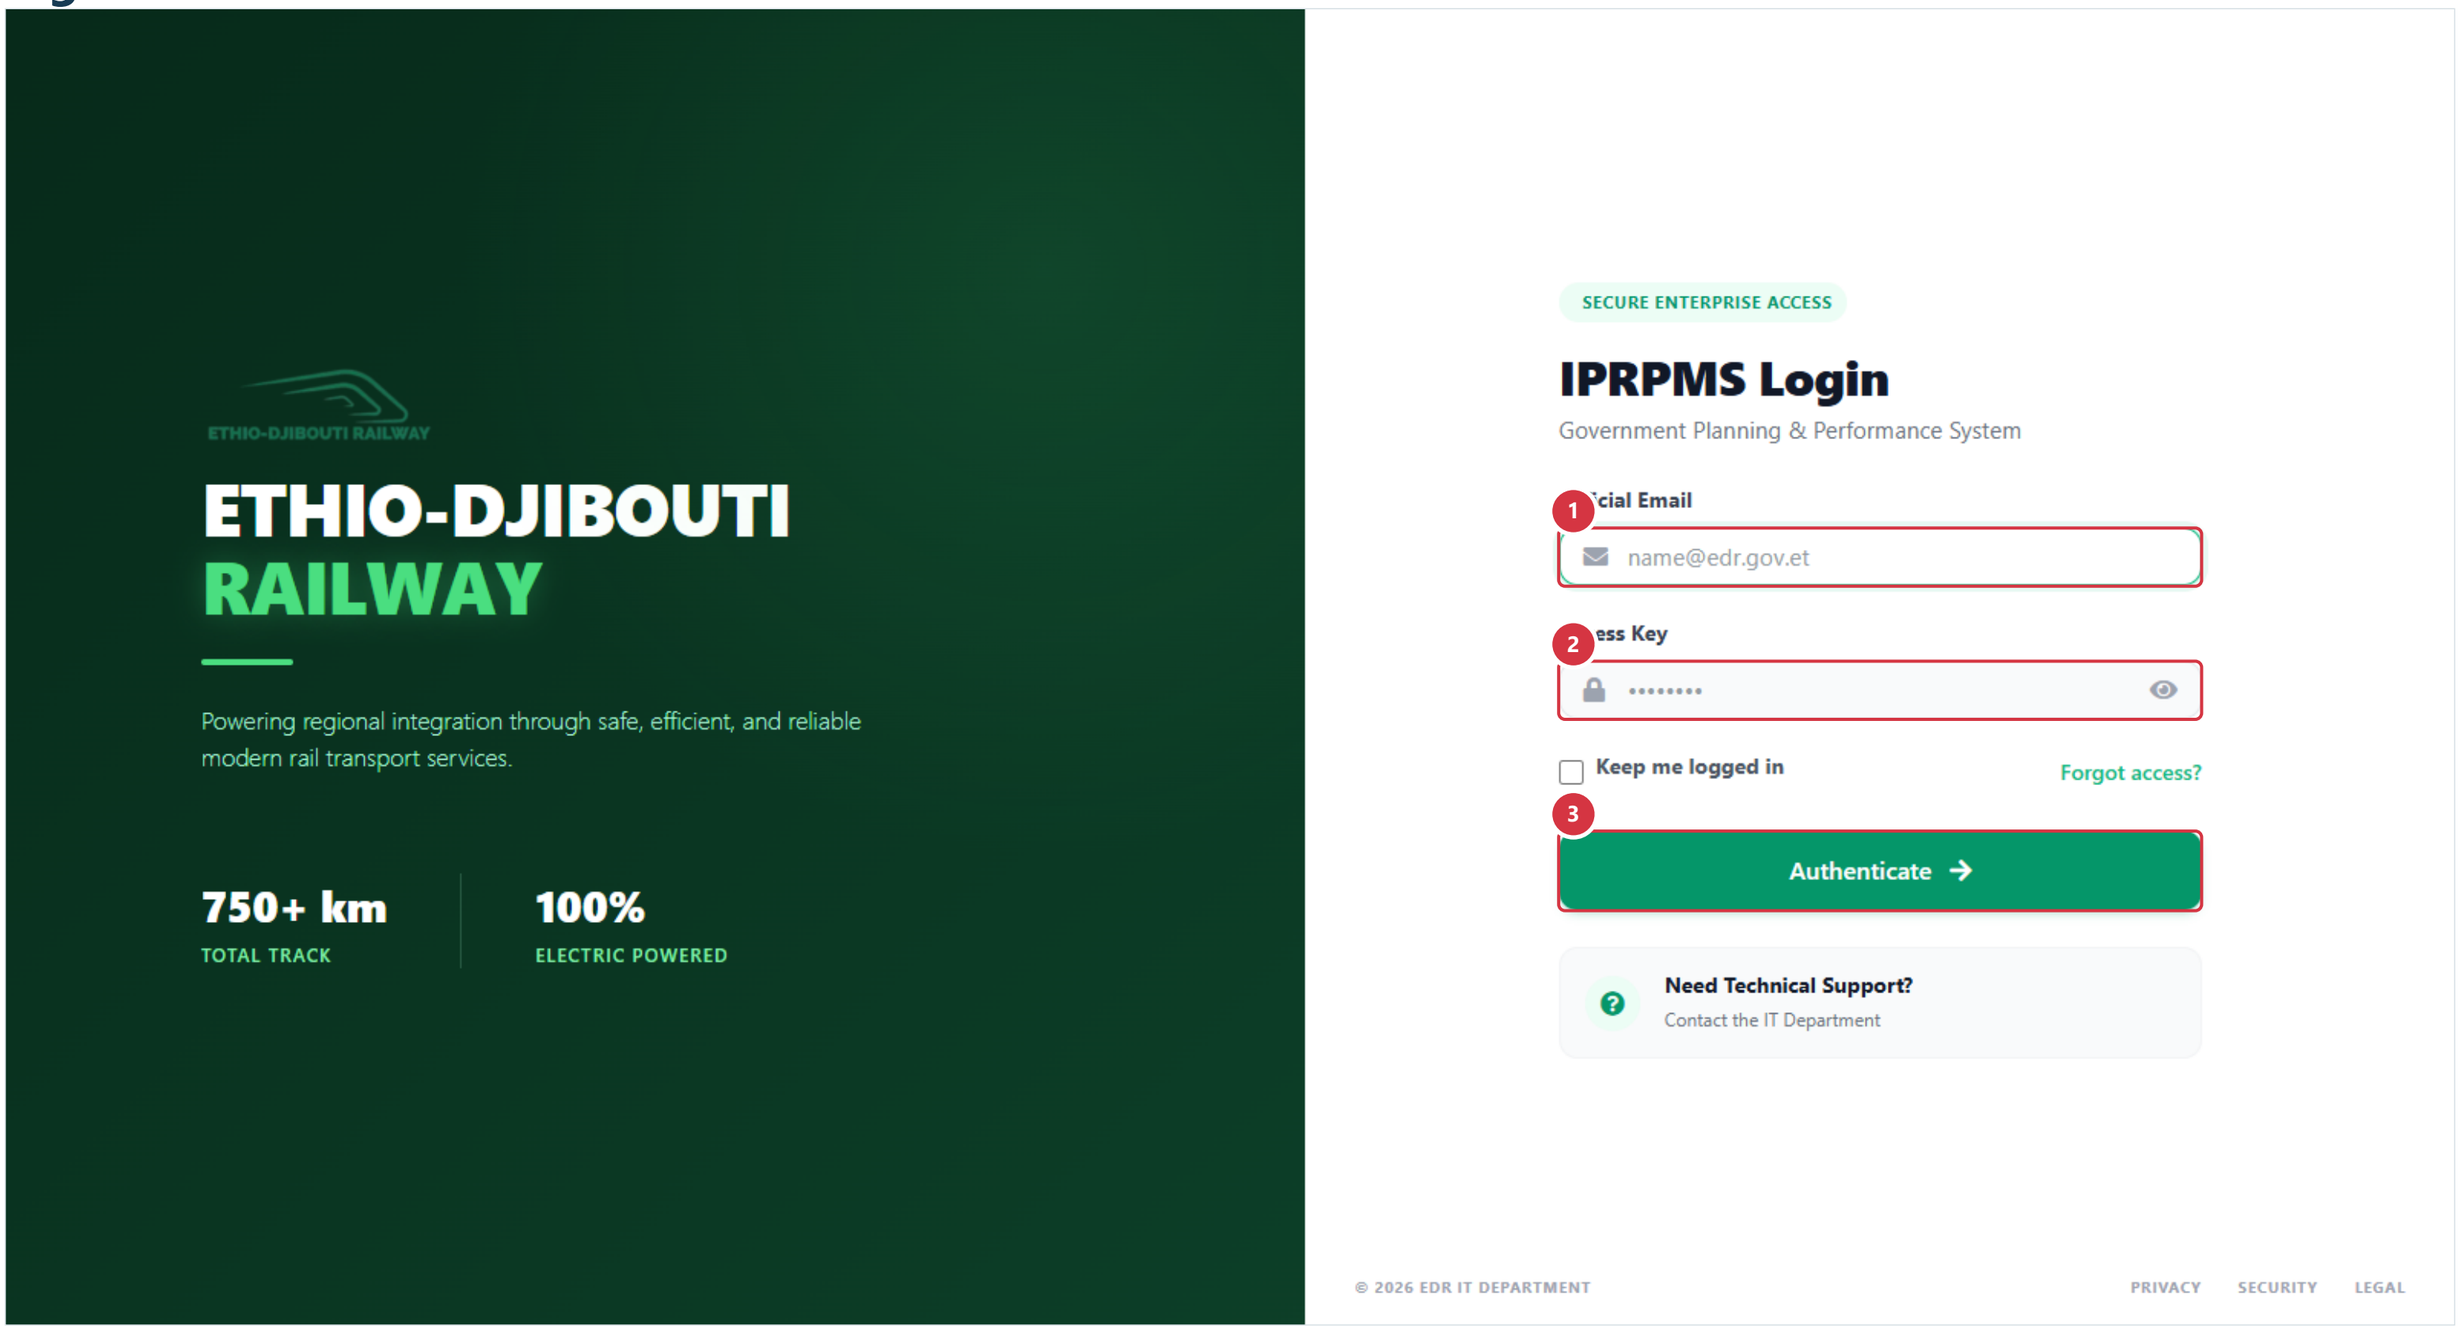

What to check

Check the name and role at the top right. Change your temporary password when prompted. Your profile is for your own name, email and password; department and role changes belong to the administrator.

How you know it worked

You can open the dashboard with the correct account. The notification bell shows work sent to you. On a shared computer, sign out when finished and do not choose Keep me logged in.

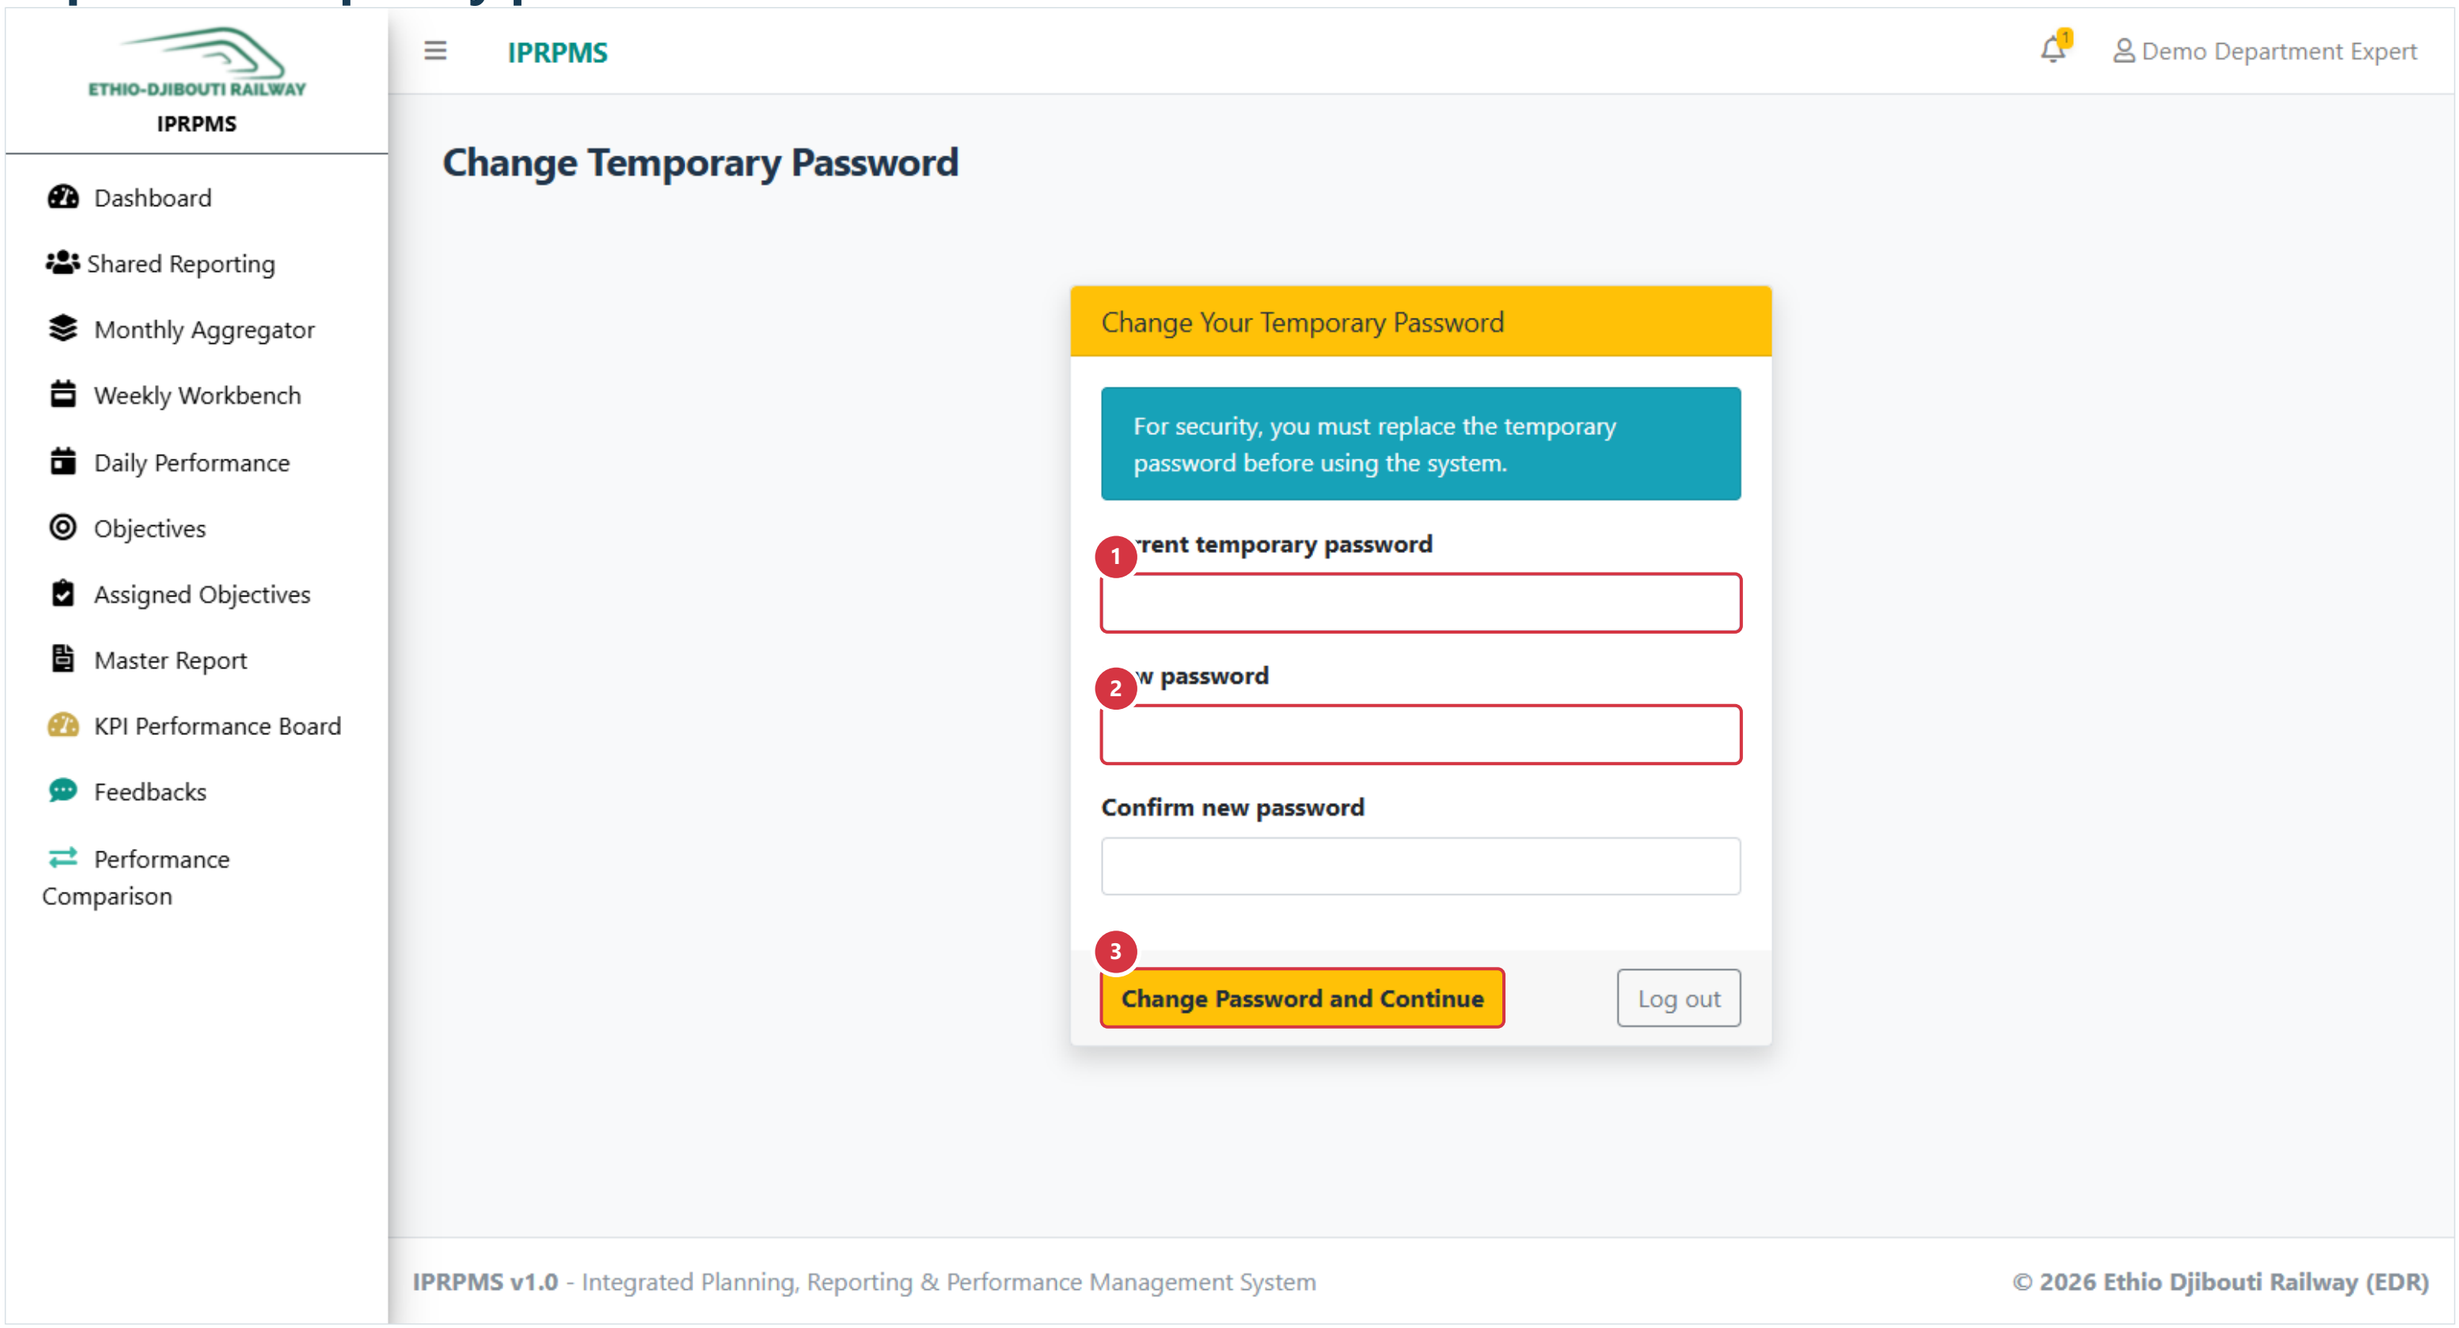

Sign in to IPRPMS

1. Enter your official email in Official Email.
2. Enter your own access key in Access Key.
3. Select Keep me logged in only on your own device, then click Authenticate.

After this step: The dashboard opens after authentication. Password fields in this handbook remain blank.

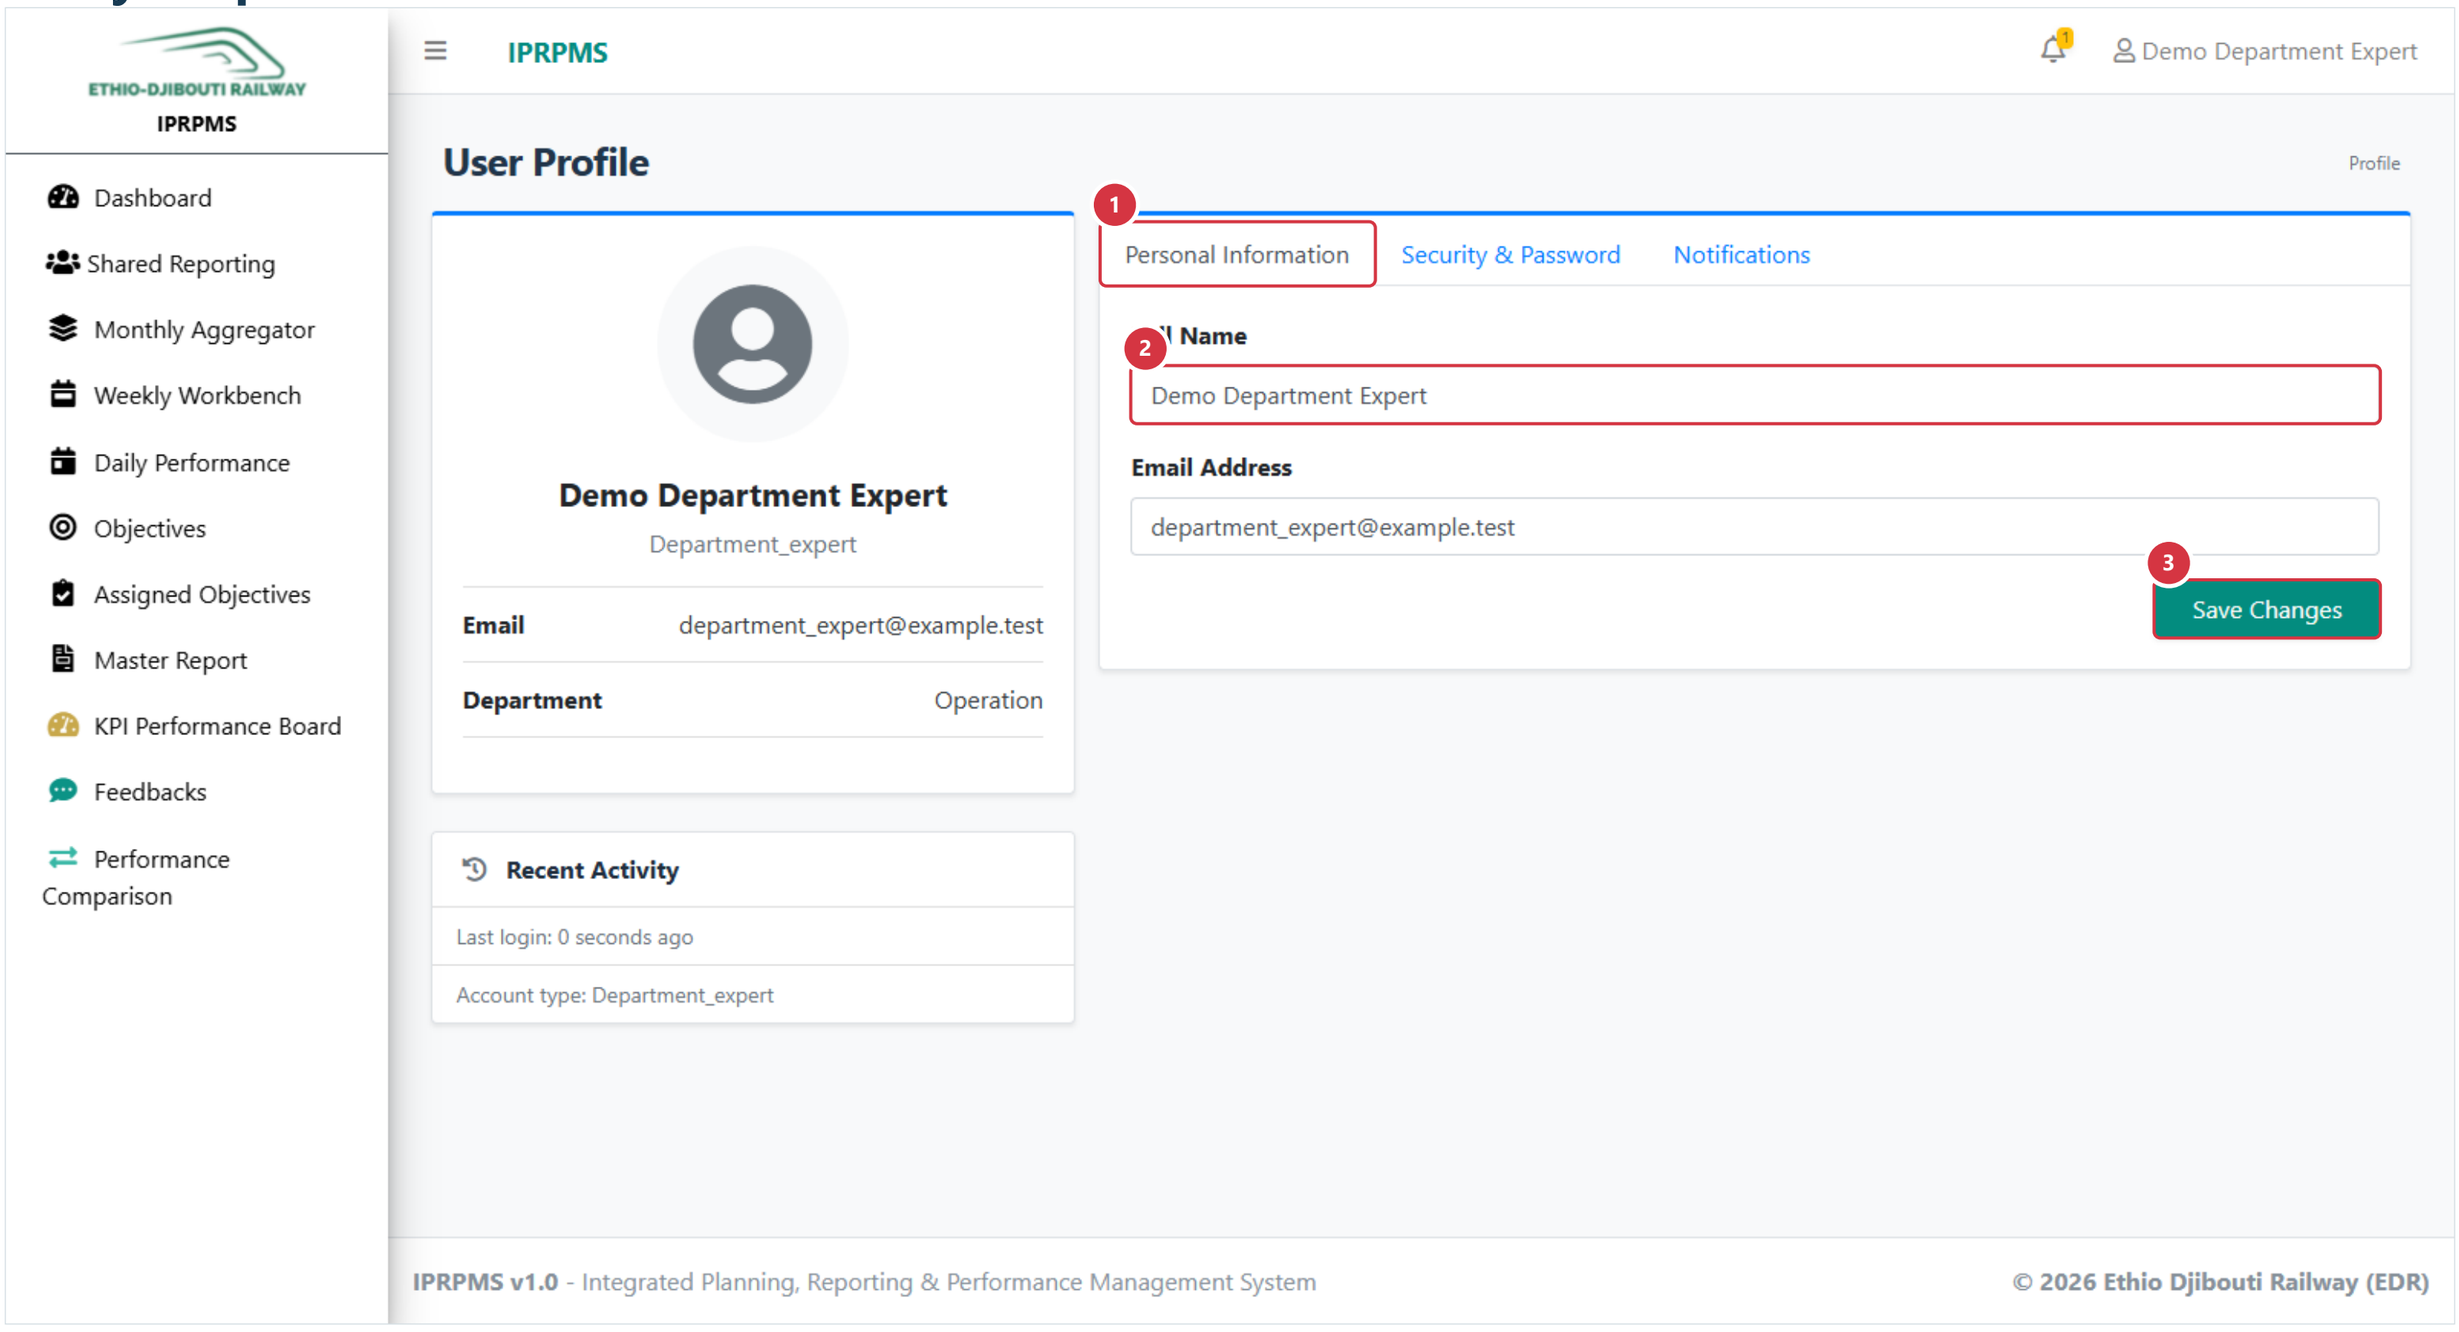

Replace a temporary password

1. Enter the current temporary password.
2. Enter a new private password and repeat it in Confirm new password.
3. Click Change Password and Continue.

After this step: This screen appears when the administrator requires a first password change.

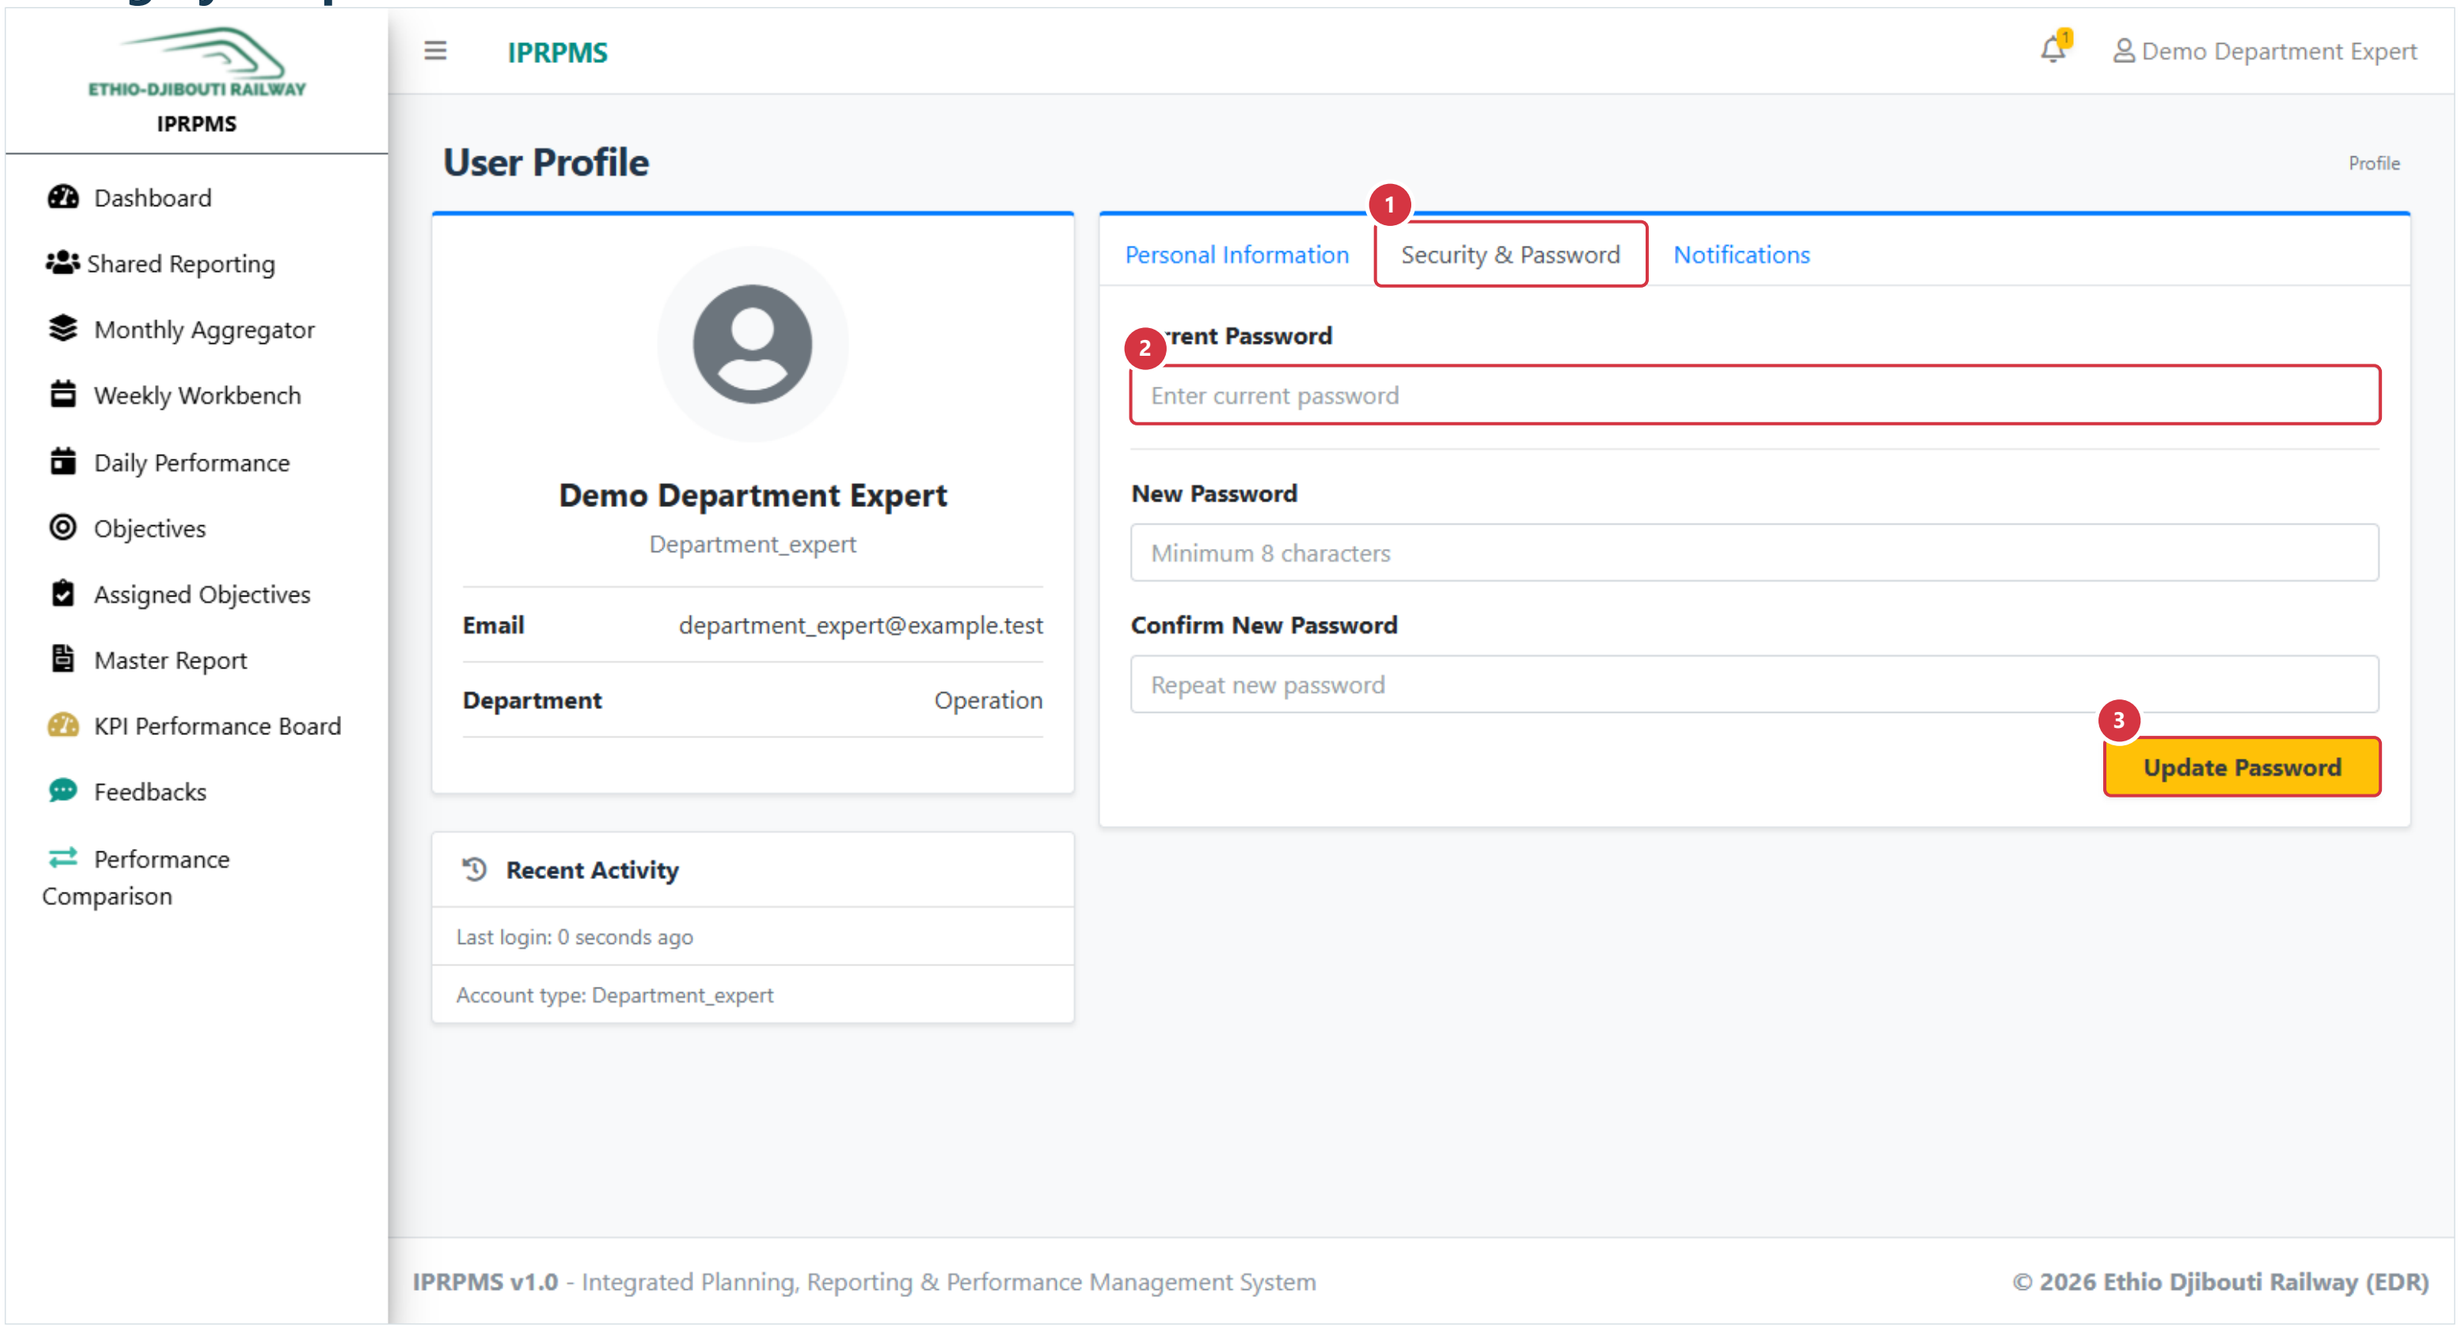

Edit your personal information

1. Click Personal Information in Profile.
2. Update Full Name or Email Address.
3. Click Save Changes and confirm the success message.

After this step: Department and role assignments are managed by the administrator, not through this form.

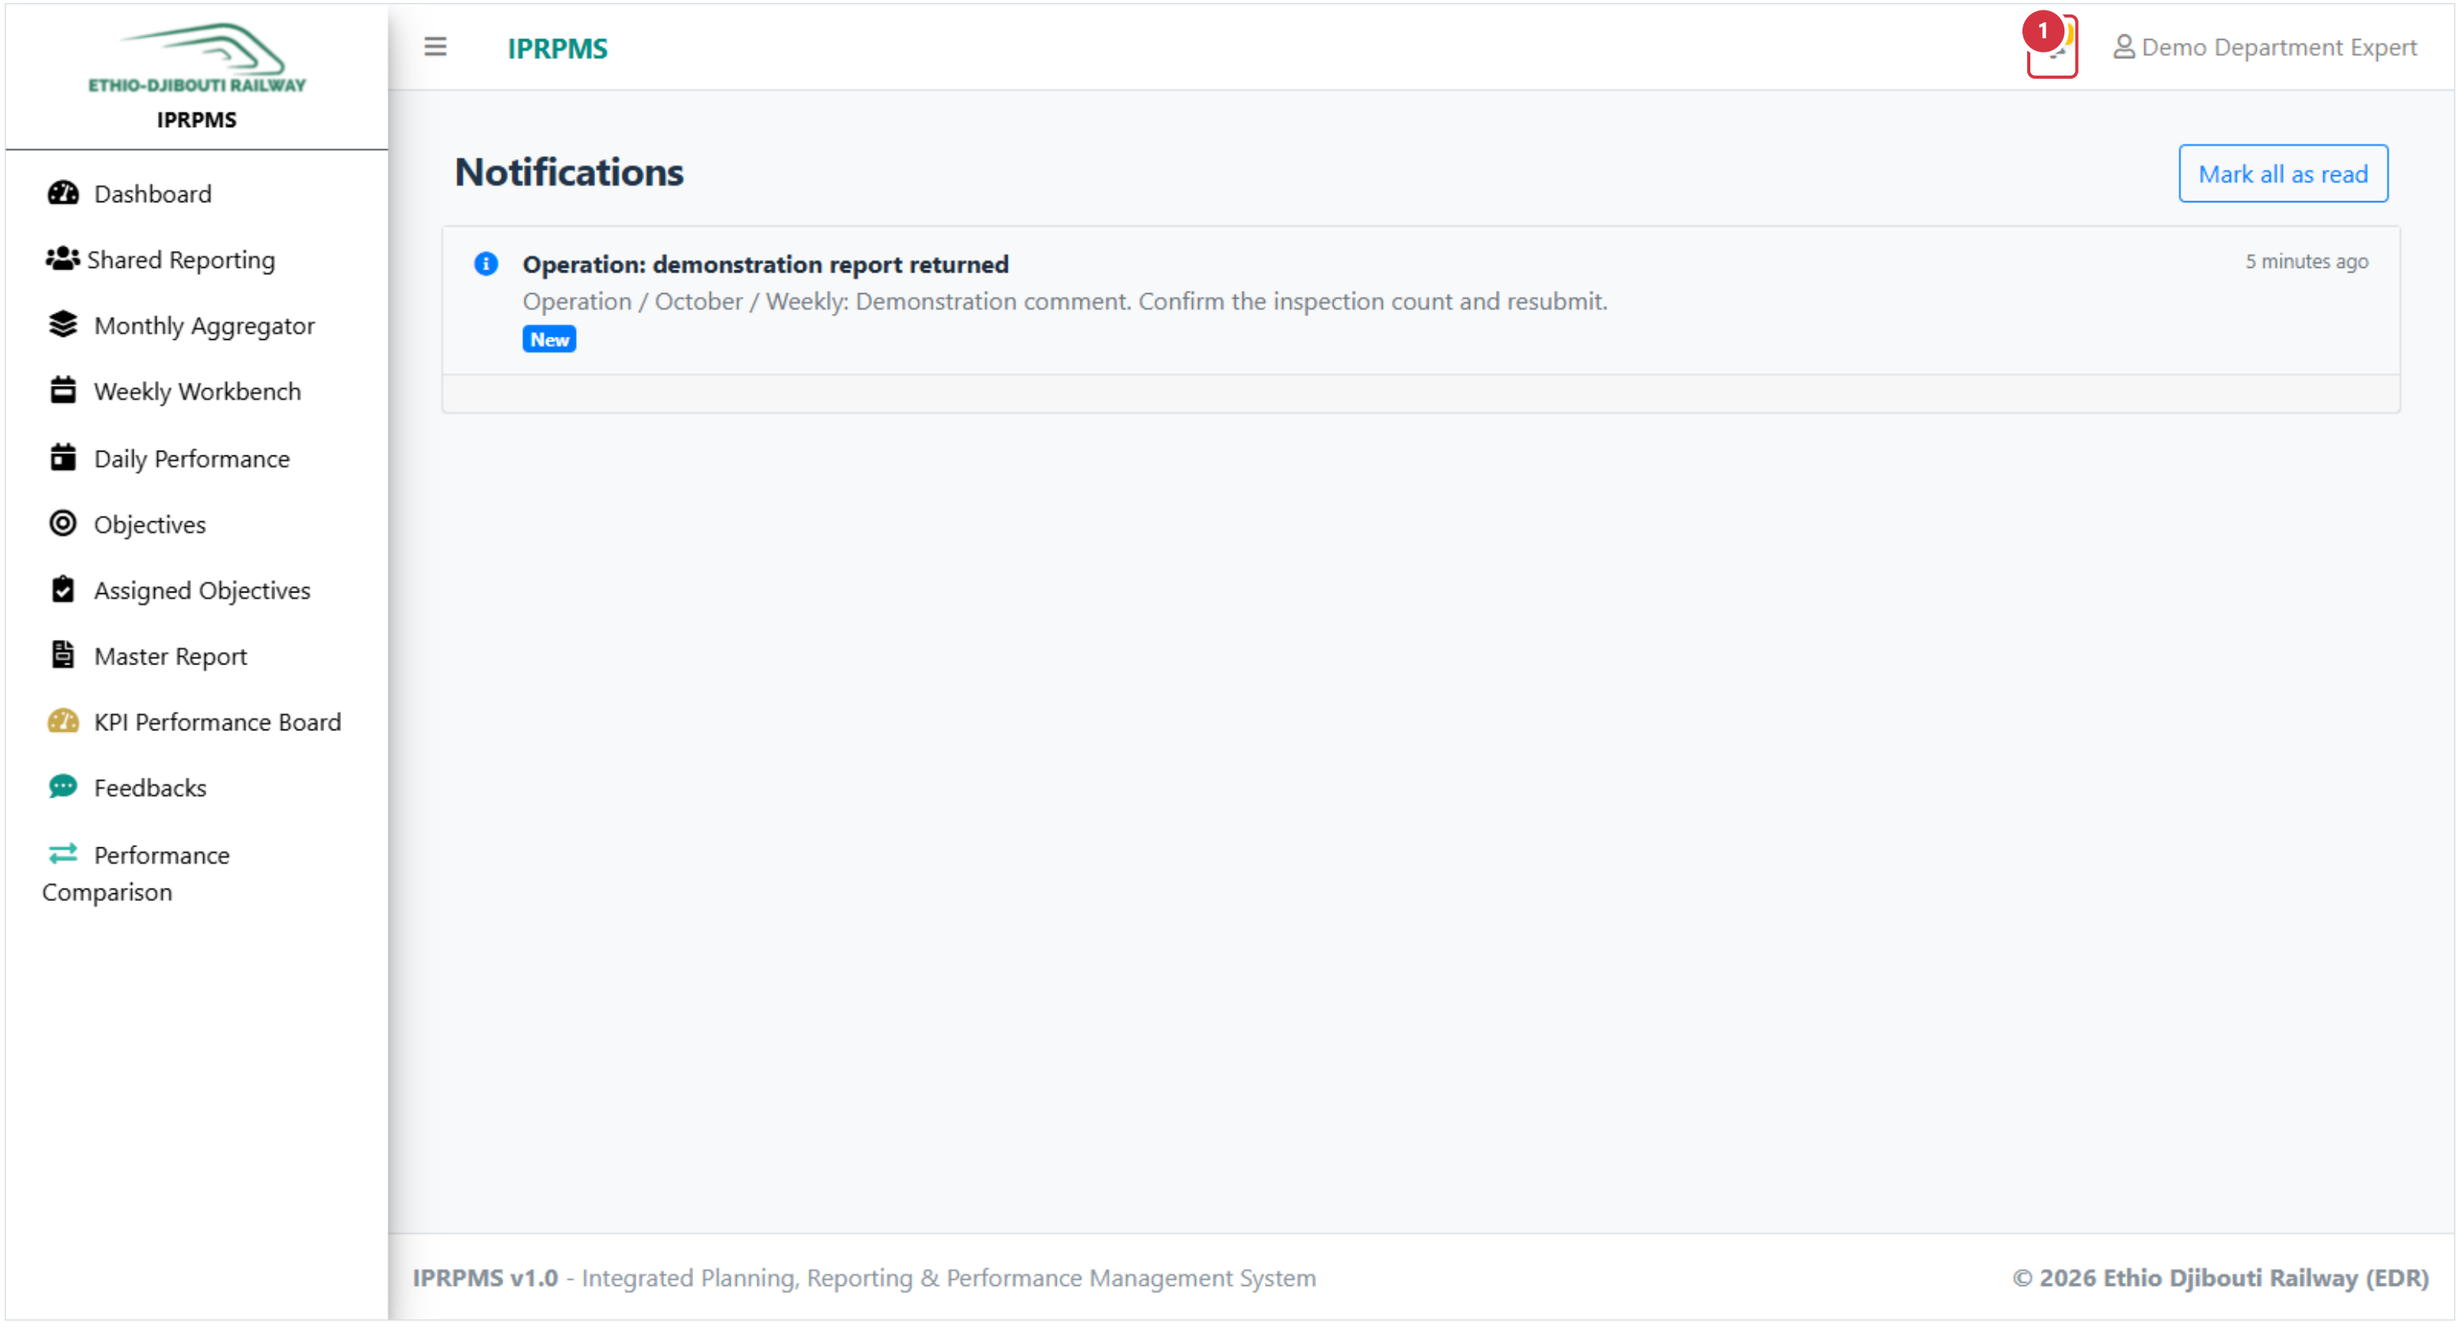

Change your password

1. Click Security & Password.
2. Enter your current password, a new password and its confirmation.
3. Click Update Password.

After this step: Use a private password. The fields are deliberately empty in this training capture.

Read workflow notifications

1. Open the notification bell or Notifications page.
2. Read the department, period, action and review comment.
3. Open the linked record or mark the notice read after acting on it.

After this step: Marking a notification read does not approve, correct or submit the underlying record.

Create and maintain employee profiles

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Accurate employee records connect people to departments, supervisors and their authorized work.

Before you click

Have approved personnel details ready. Search existing profiles before creating a new employee.

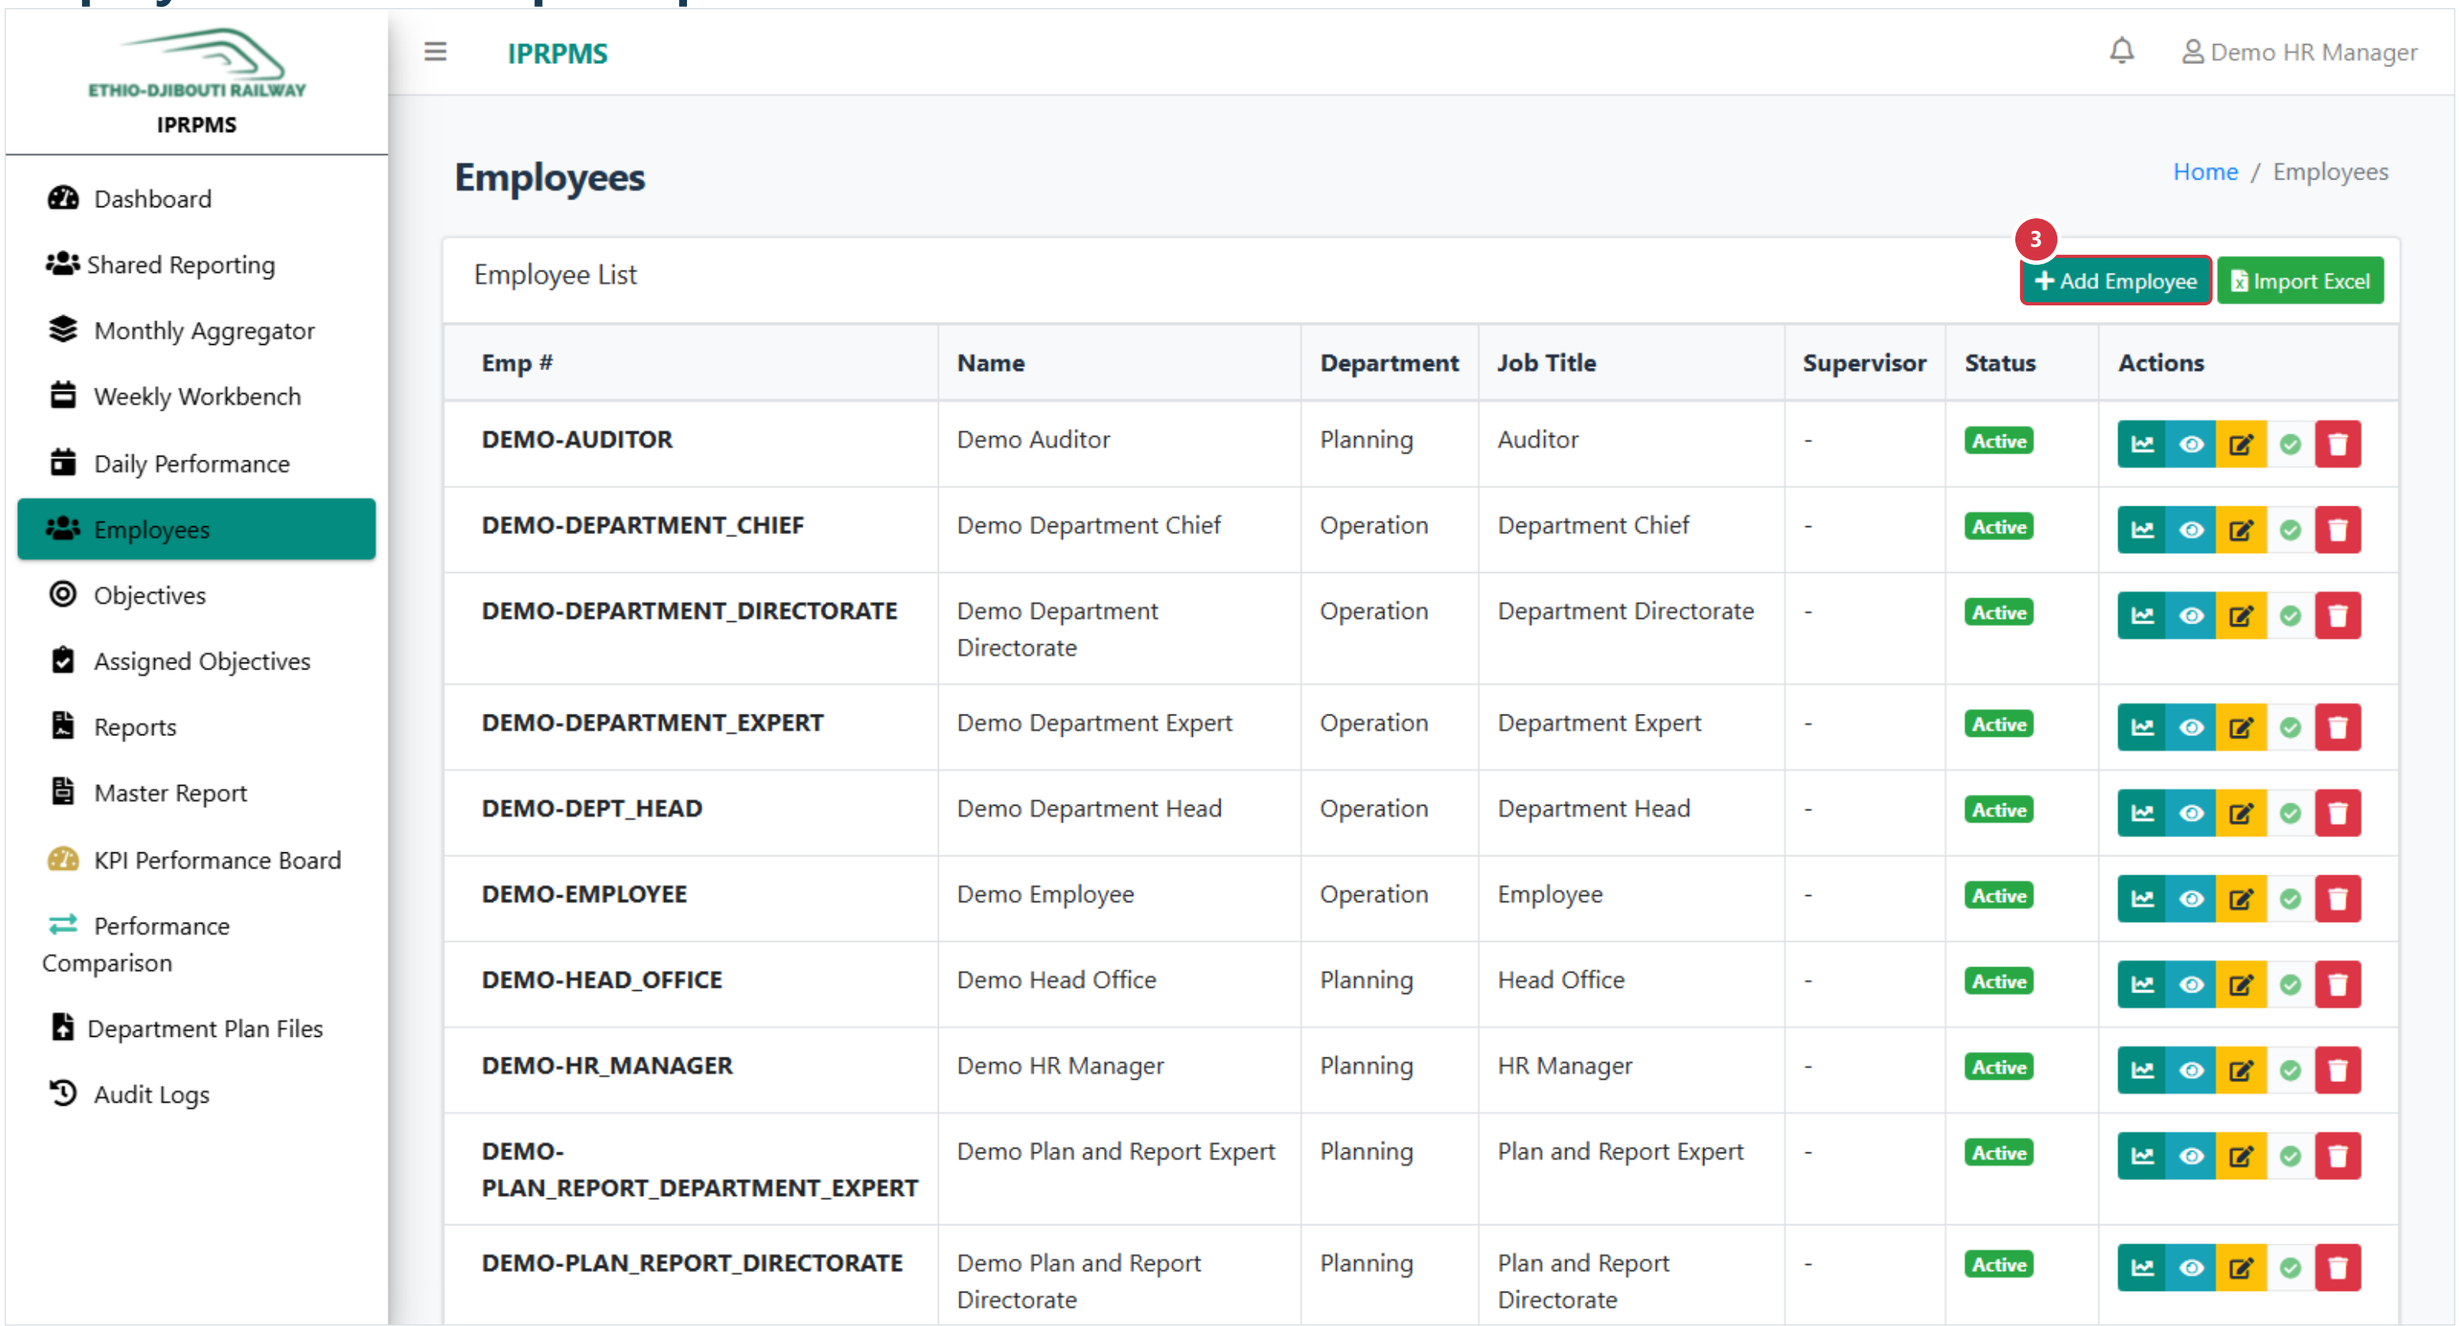

What to check

Check identity, email, department, supervisor and employment details. Use the system template for bulk imports. Do not put passwords in a general personnel file.

How you know it worked

Save and reopen the profile. Where an account is created, verify its account link separately and request role or activation changes from the administrator.

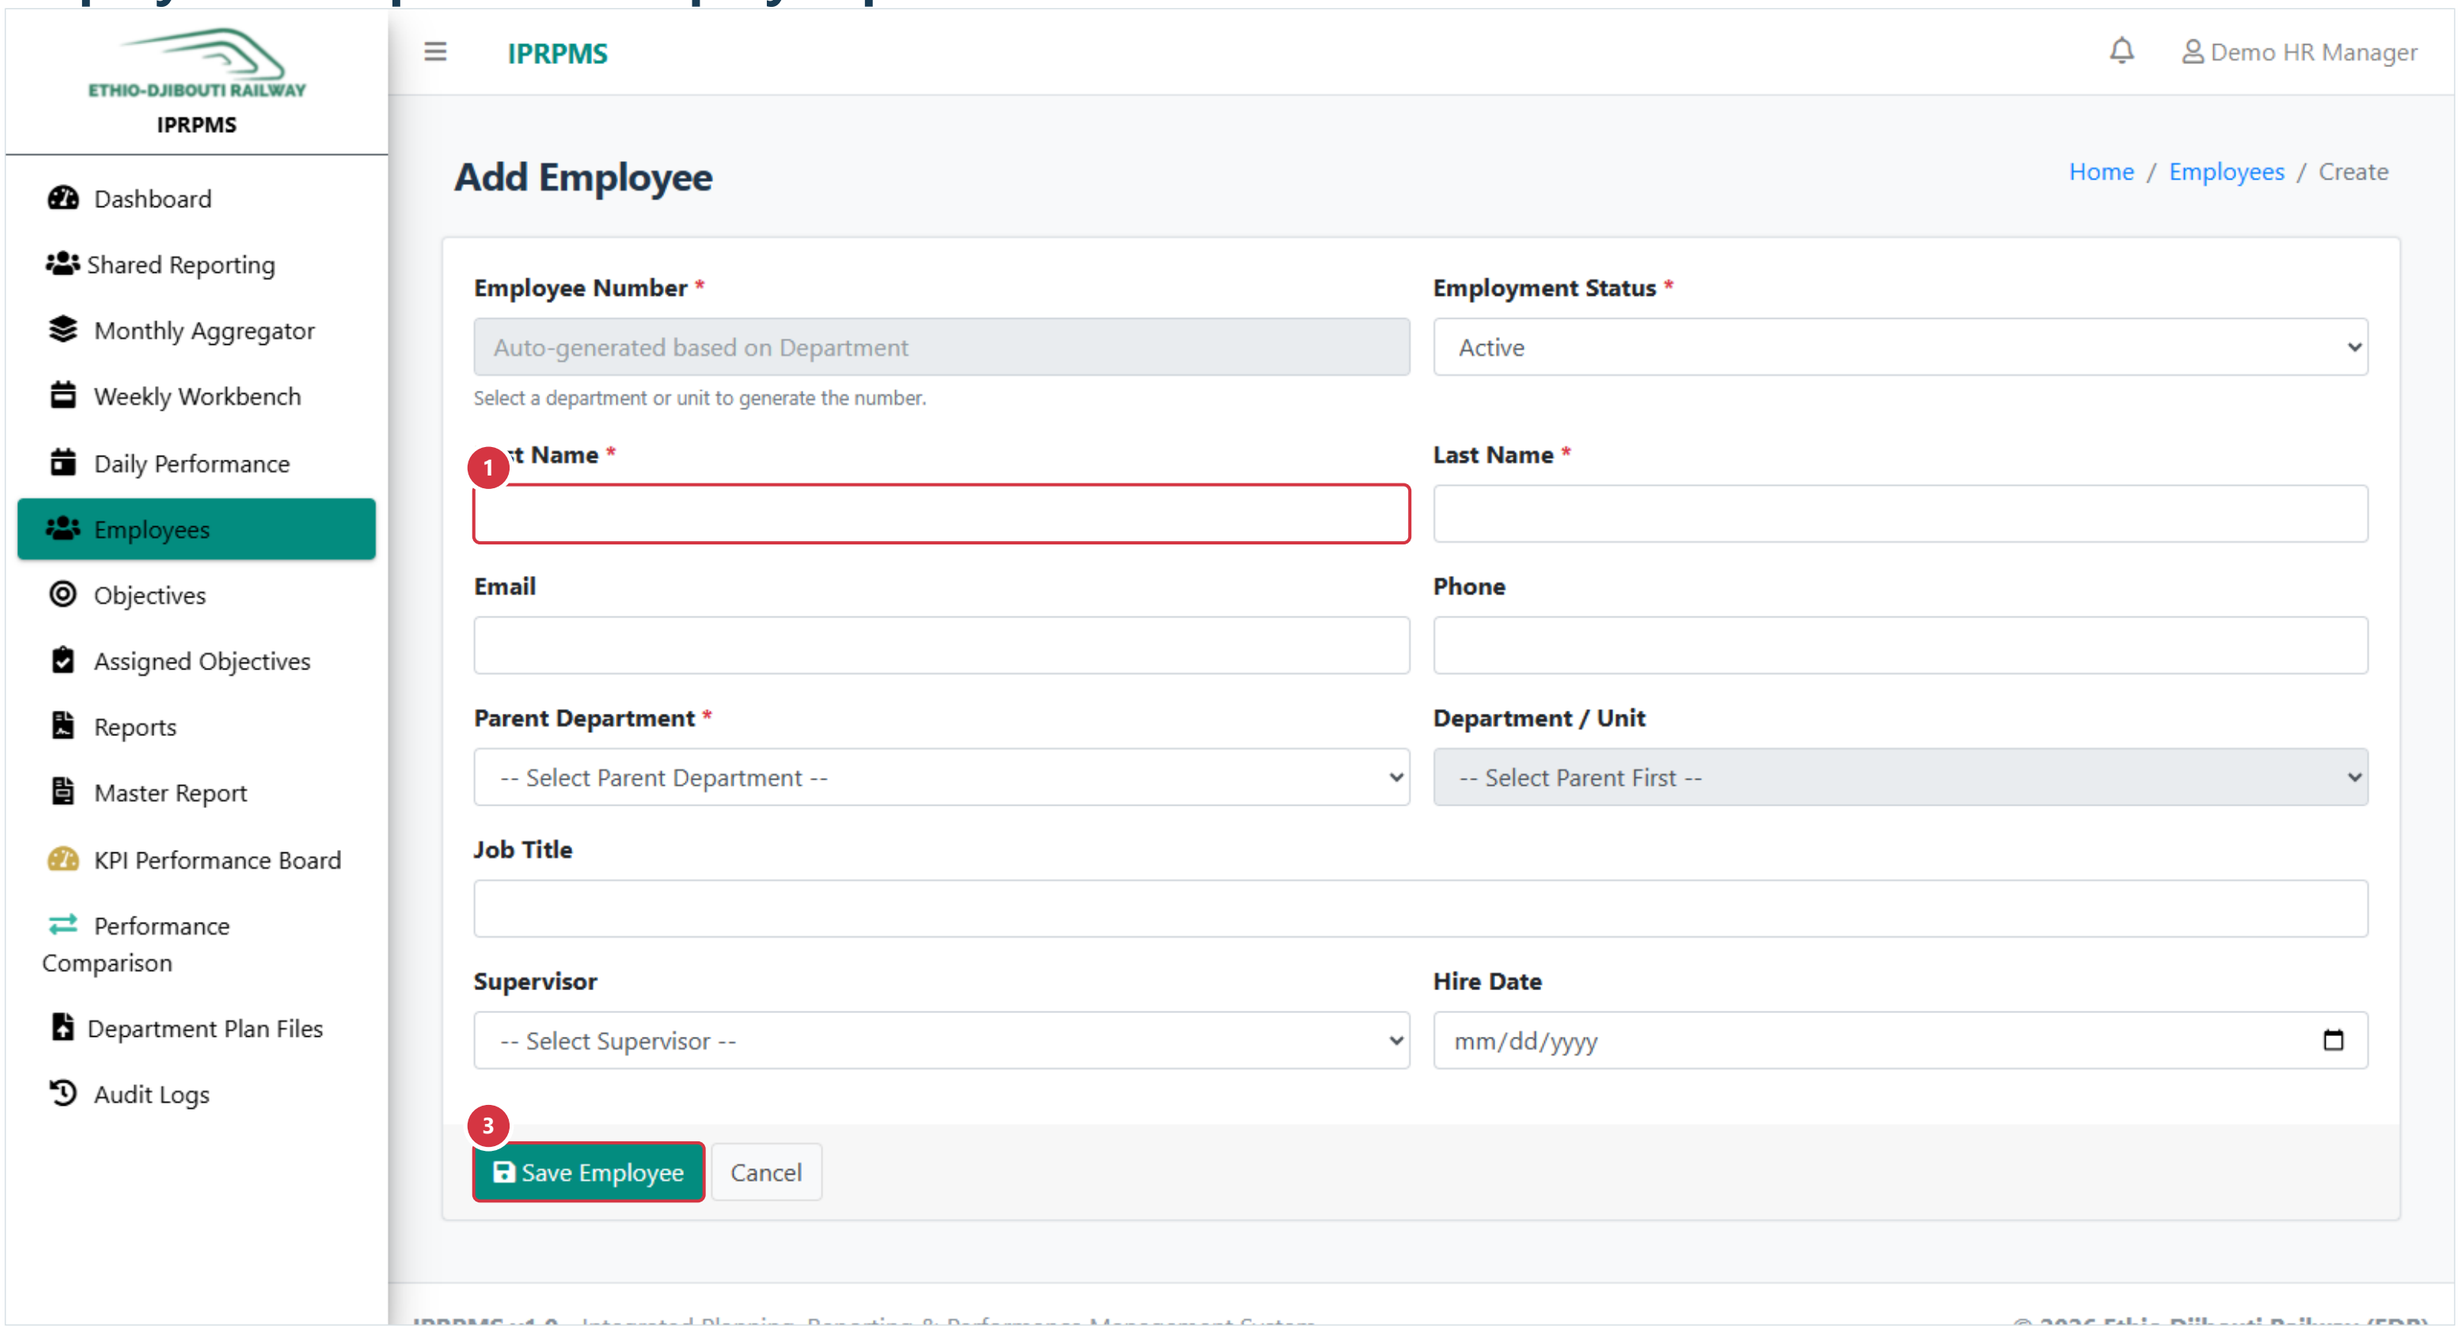

Employees: find and open a personnel record

1. Open Employees.
2. Use the search/list controls to find the record.
3. Create or edit an employee only within your authorized duties.

After this step: The screenshots contain demonstration employee names and addresses only.

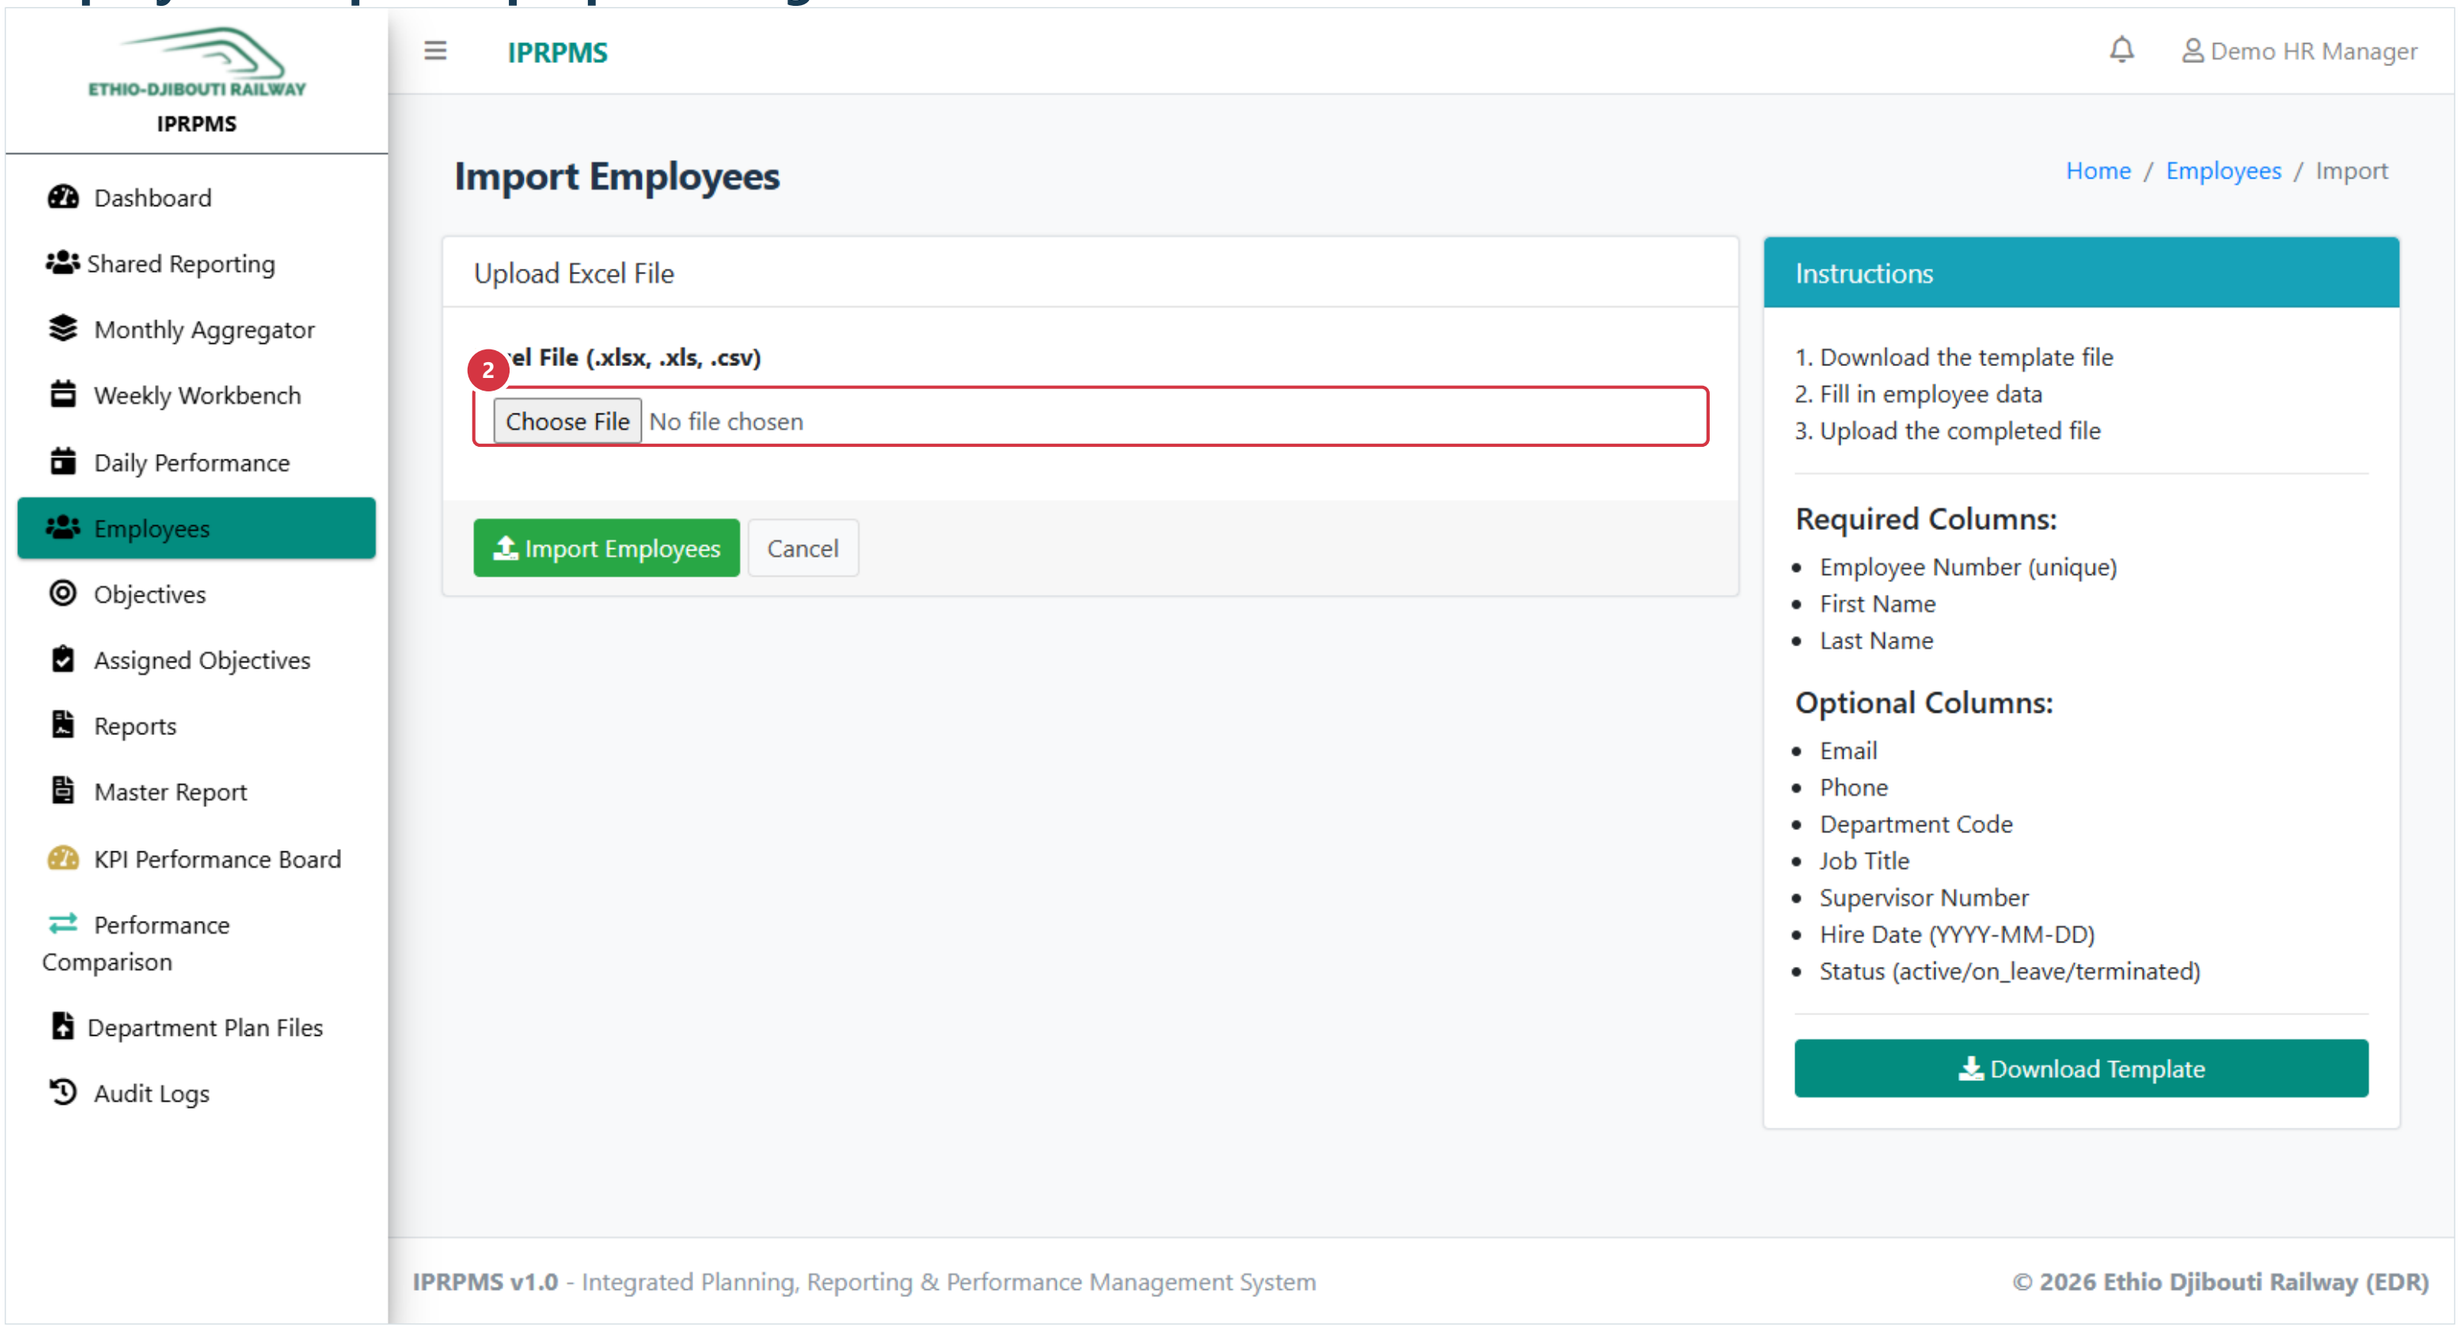

Employees: complete the employee profile

1. Enter the employee identification and contact fields.
2. Choose department, job title and supervisor.
3. Set hire/employment details and click Save Employee.

After this step: An employee record and an active login account are separate records. Account creation requires the relevant permission.

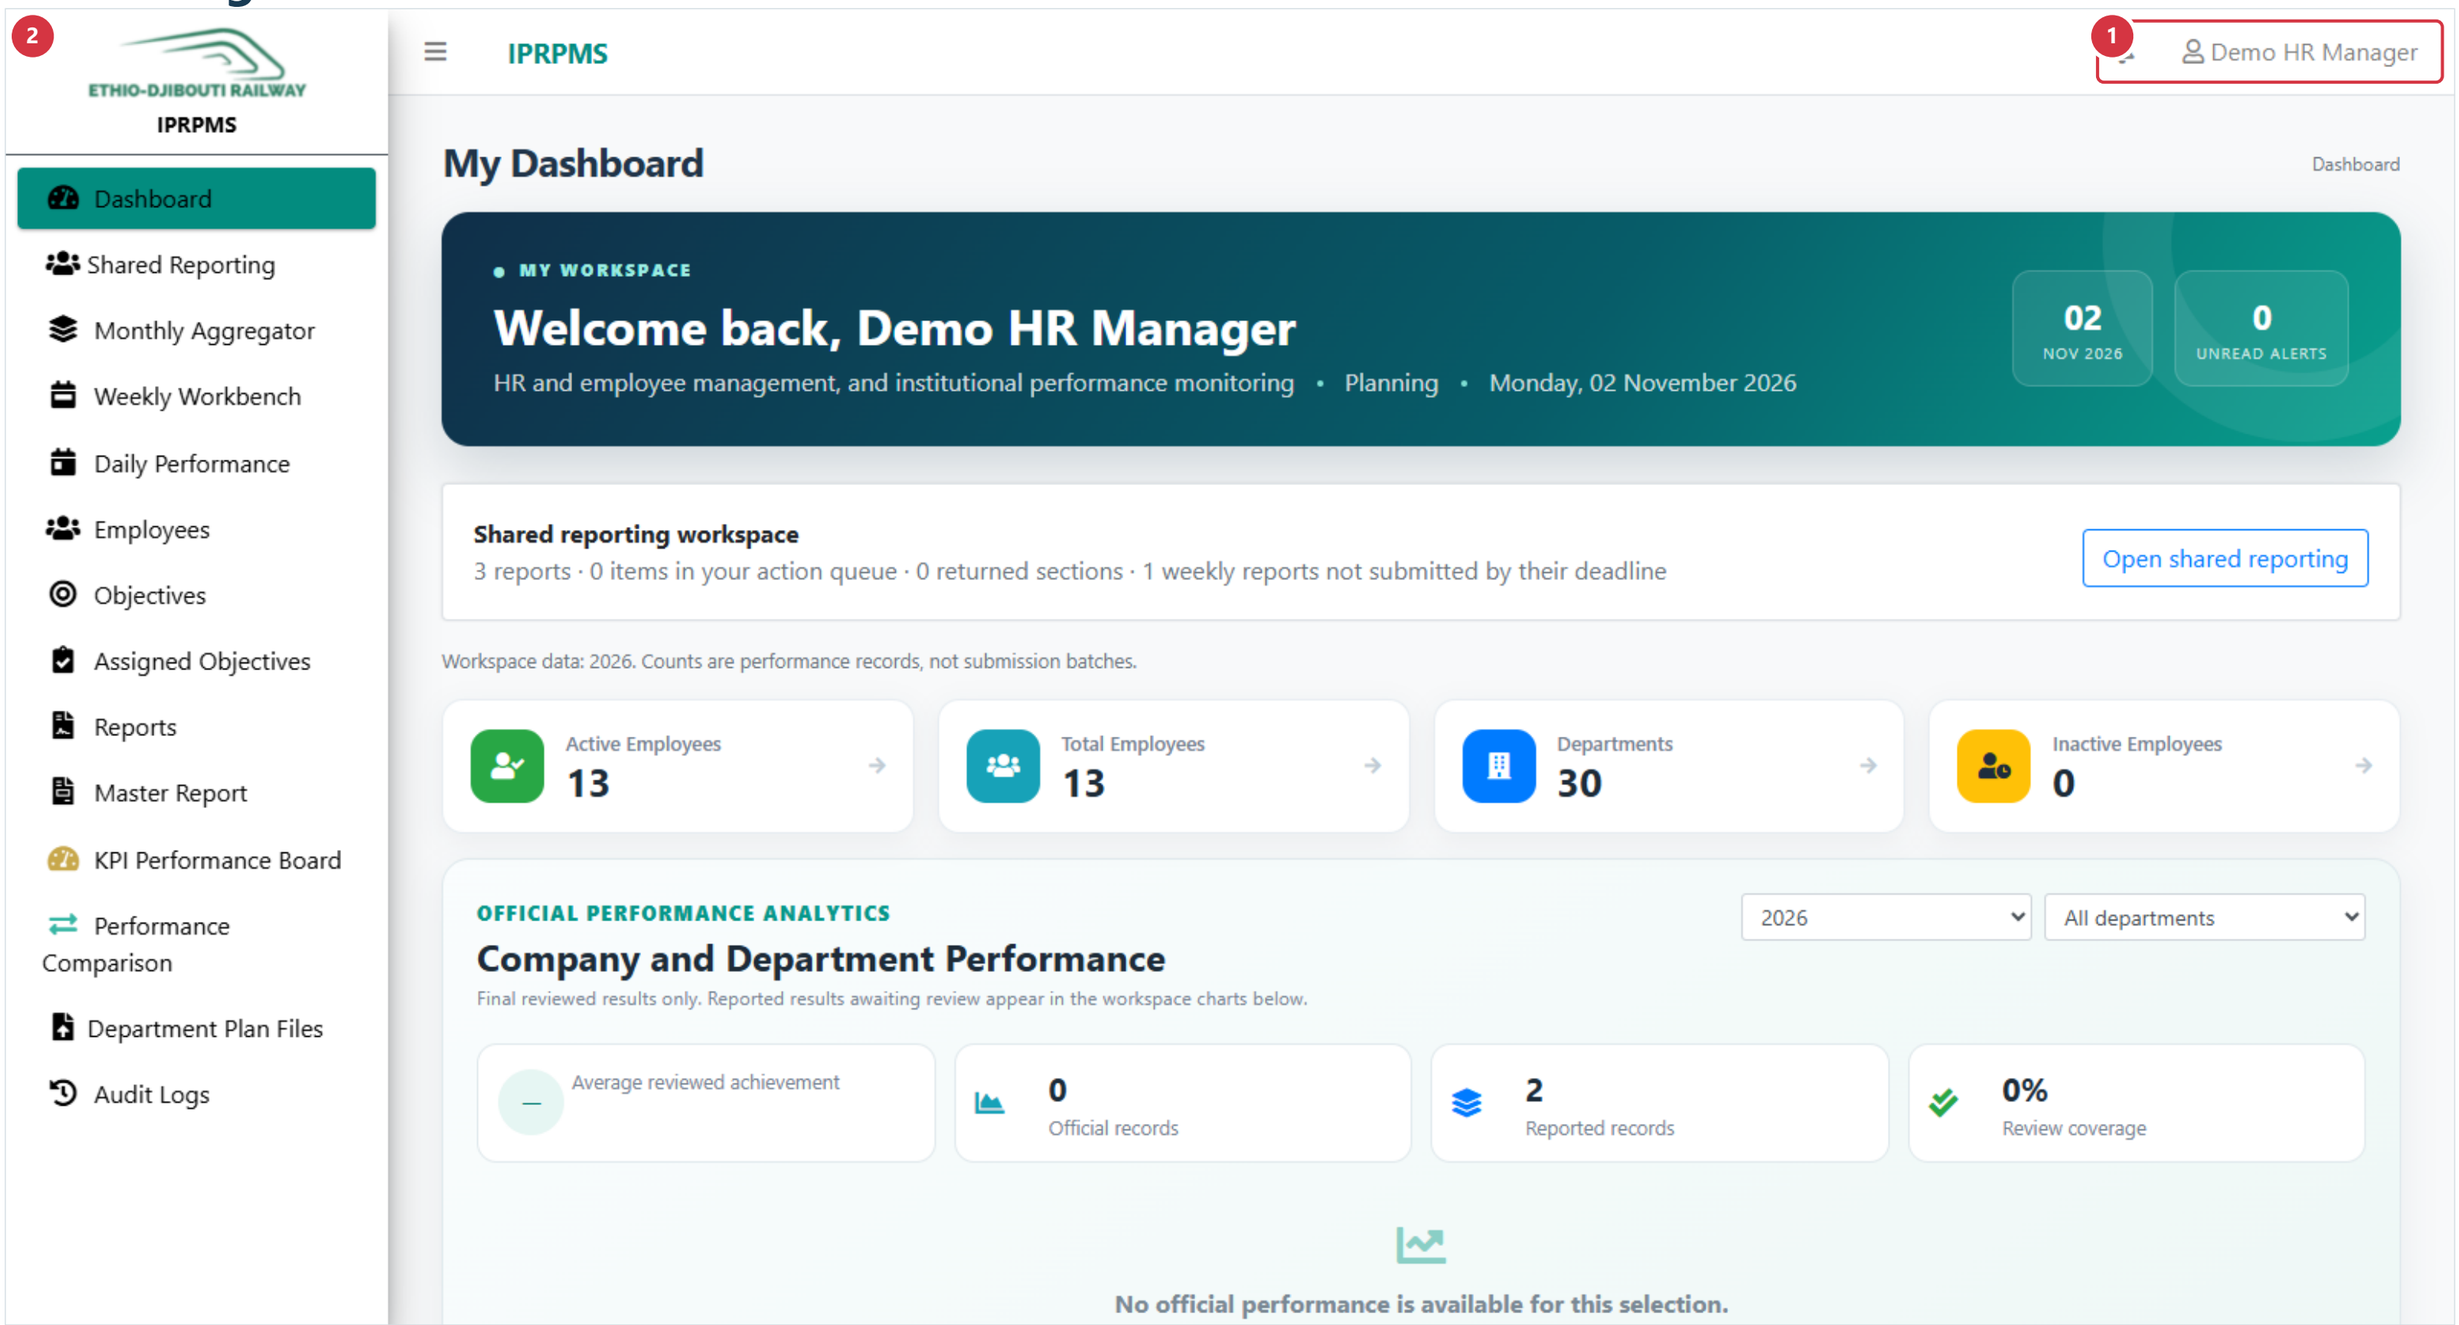

Employees: import a prepared register

1. Download the employee template if required.
2. Choose the completed Excel/CSV file.
3. Click the Import control and review the resulting validation or success message.

After this step: Check required column formats and avoid importing duplicate employee identifiers.

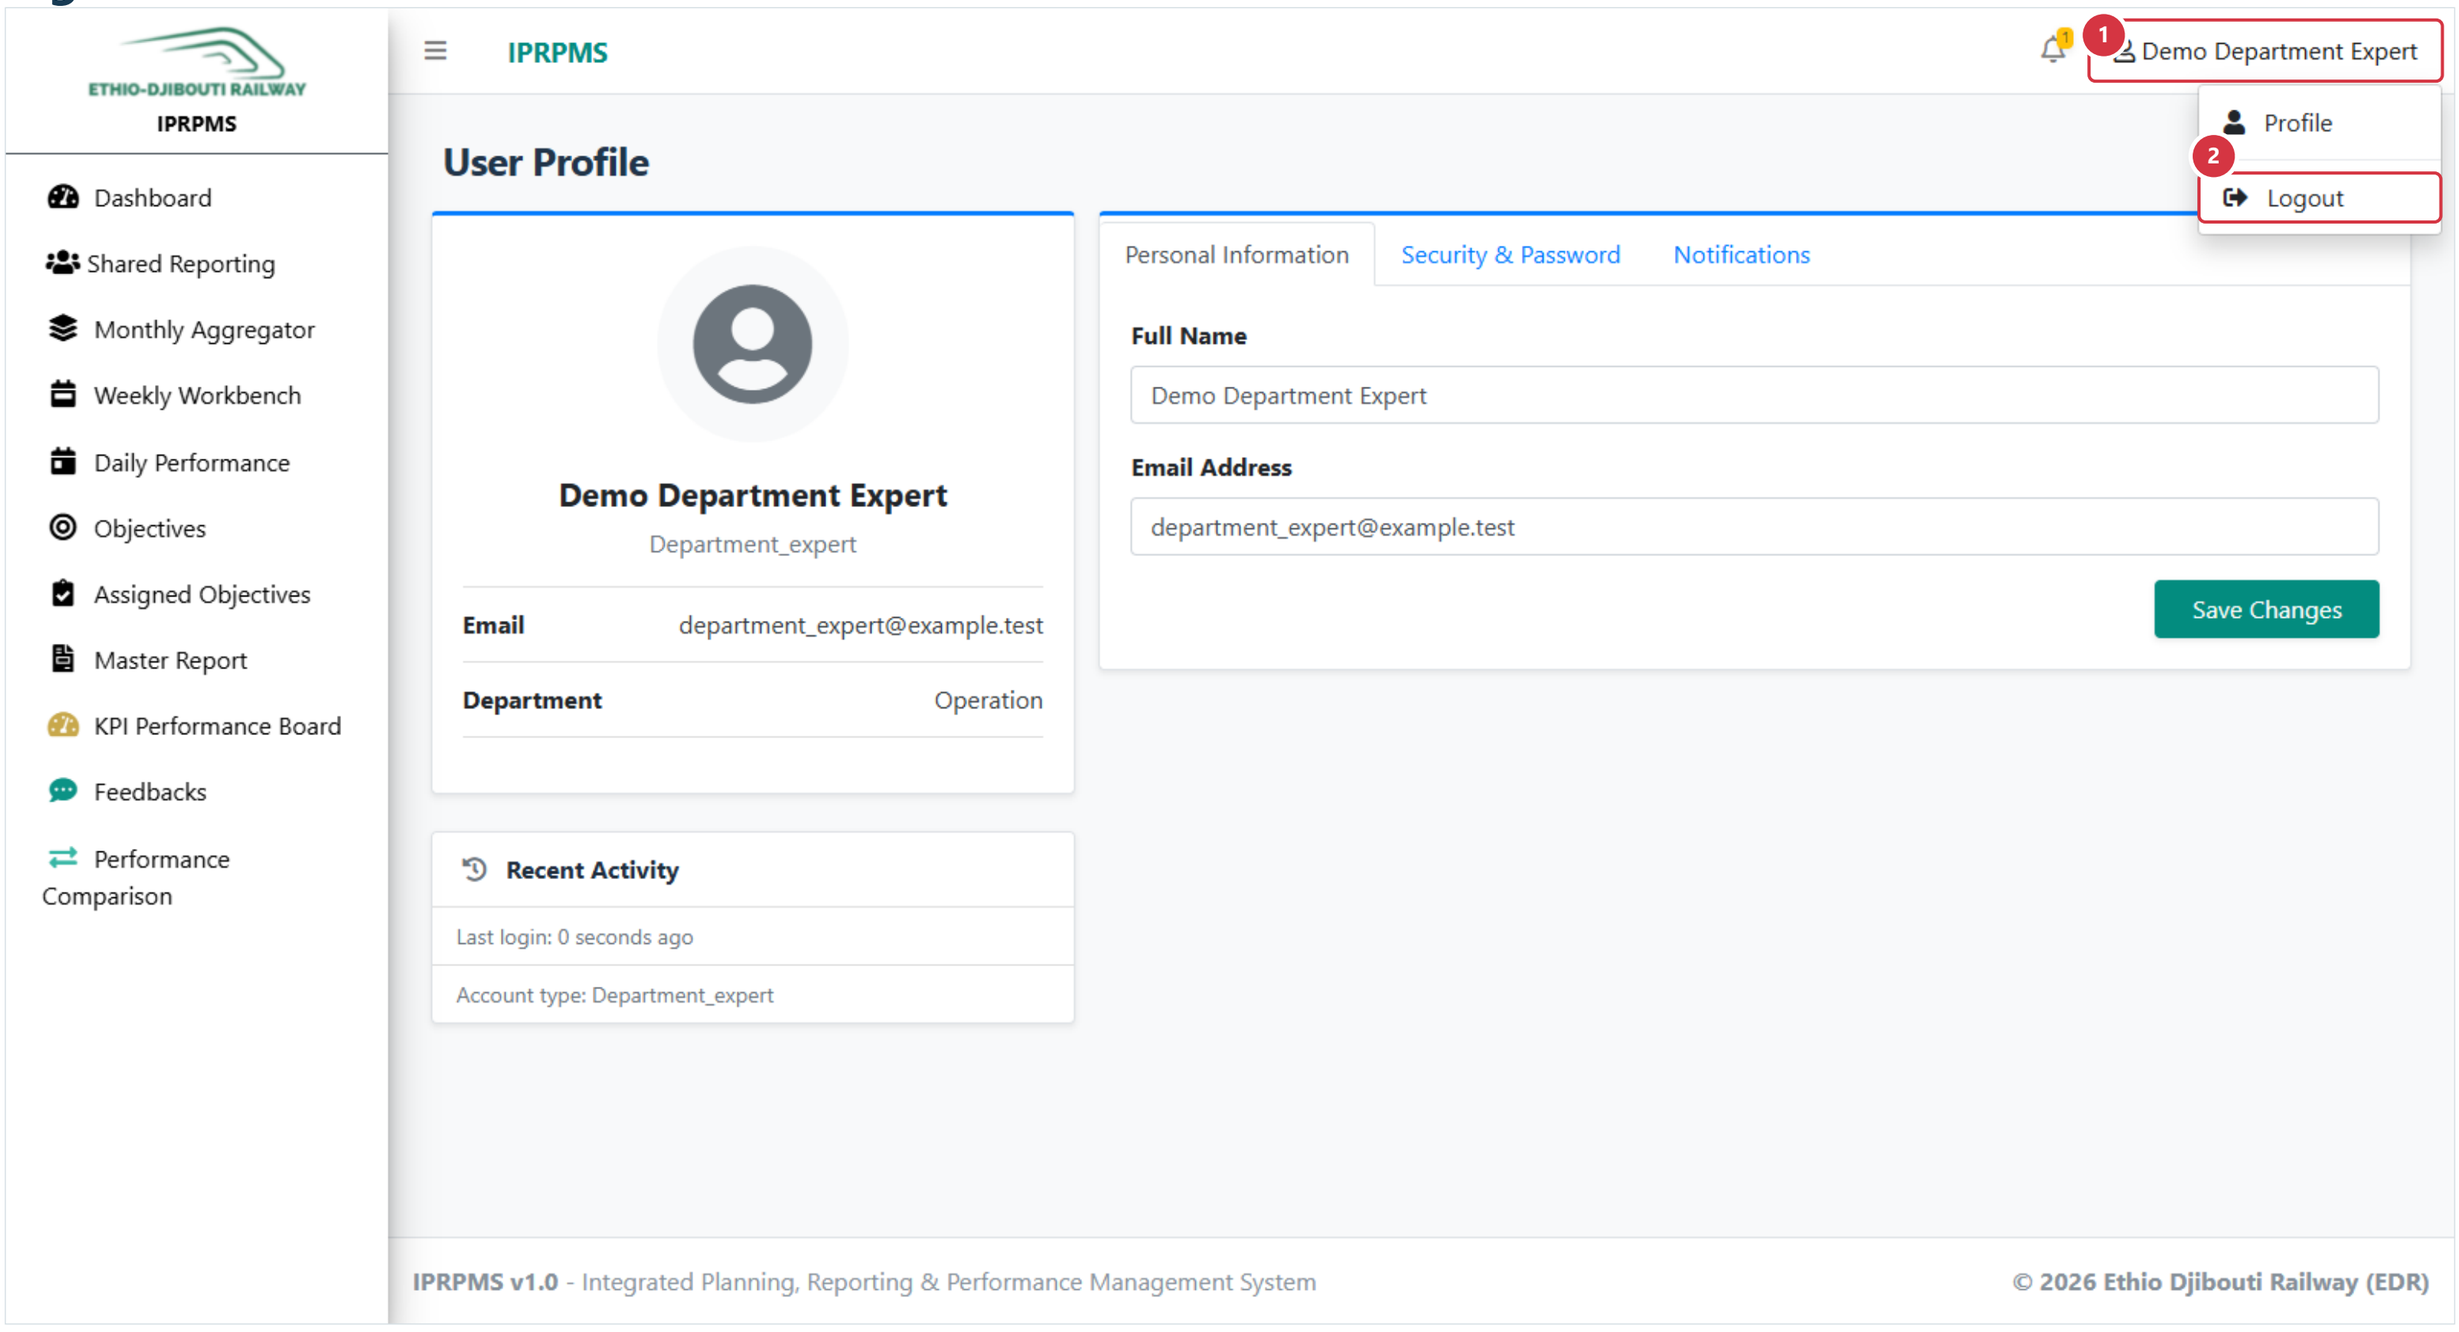

HR Manager: home screen

1. Confirm your signed-in HR Manager role at the top right.
2. Maintain employee profiles and permitted employee-account links.
3. Request department-structure or user-role changes from the System Administrator.

After this step: Menus vary by permission, department and reporting frequency.

Sign out on a shared device

1. Click your name at the top right to open the user menu.
2. Click Logout after you finish your work.

After this step: The application returns to the sign-in screen after logout.

Before you finish, check these four things

Finish means your part is complete and you know who has the next action. It does not always mean the whole record is finally approved.

Your completion checklist

1. I checked for duplicate employees. 2. Identity, department and supervisor are correct. 3. The employee profile and user account were not confused. 4. Access issues were sent to the administrator rather than solved by editing unrelated personnel fields.

If a menu or button is missing

A person with an active personnel profile can still have an inactive or wrongly assigned user account. Ask the administrator to check Users & Roles; do not create a second employee to fix login.

Ask for help with useful details

Give IT or the responsible reviewer the module, department, year, reporting period, objective or record reference and exact message. Include a safe screenshot. Never send your password.

Keep the process and data safe

Use your own account, save before sending, read return comments and keep the same record for corrections. Demonstration screenshots are teaching examples, not official performance figures. The separate logistics Import/Export module is excluded.
