Employee

Your responsibilities, complete workflow, exact clicks and return paths.

Read first: the Start Here guide explains how the whole system works. Then use this manual to do your part, check the outcome and hand work to the right person.

Understand your job before the buttons

Keep this page in mind whenever you receive a new record. It explains your responsibility and where your part stops.

Your job

Understand your assigned work, perform it and keep the evidence needed to explain the result.

What you receive

Tasks from your supervisor or department lead with an expected output and deadline.

Who receives your work

Your progress, evidence and questions to the responsible supervisor using the organization's authorized working process.

Your limits and important distinctions

You do not create organization objectives or approve departmental results. The inspected My Tasks and task-detail pages returned errors, so a working task-report submission cannot be demonstrated honestly yet.

Your workflow, from first action to finish

Read down the page. Each step has an outcome; do not jump ahead simply because a button is visible.

1

Sign in with your own account

Check the name and role, and change a temporary password if the application asks.

2

Understand your assignment

Confirm the task, expected output, deadline and supervisor. Ask for clarification before doing the wrong work.

3

Check access to your work

Use the task or dashboard controls your account offers. If a page errors, record its message and inform the supervisor or administrator.

4

Perform the work and retain evidence

Keep the relevant dated output or register. Do not enter invented completion values to clear a warning.

5

Report through the working approved process

Once the task-report pages are corrected, use the authorized controls. Until then, follow the supervisor's approved reporting arrangement.

6

Read corrections and follow through

Clarify any returned work, make the required correction and confirm the supervisor has received it. Do not assume completion equals approval.

Find the task you need

Use the page number or click a task name in the PDF. Section introductions explain the purpose before the screen-by-screen actions.

First access and everyday account safety 5

Completion checklist and help 13

First access and everyday account safety

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Use your own account. Your department and role decide what you can see and which decisions you can make. Never use somebody else's account to reach a missing button.

Before you click

Have your official account details ready. Open the address supplied by IT, enter your email and Access Key, then click Authenticate. A first-password screen appears only when your account requires it.

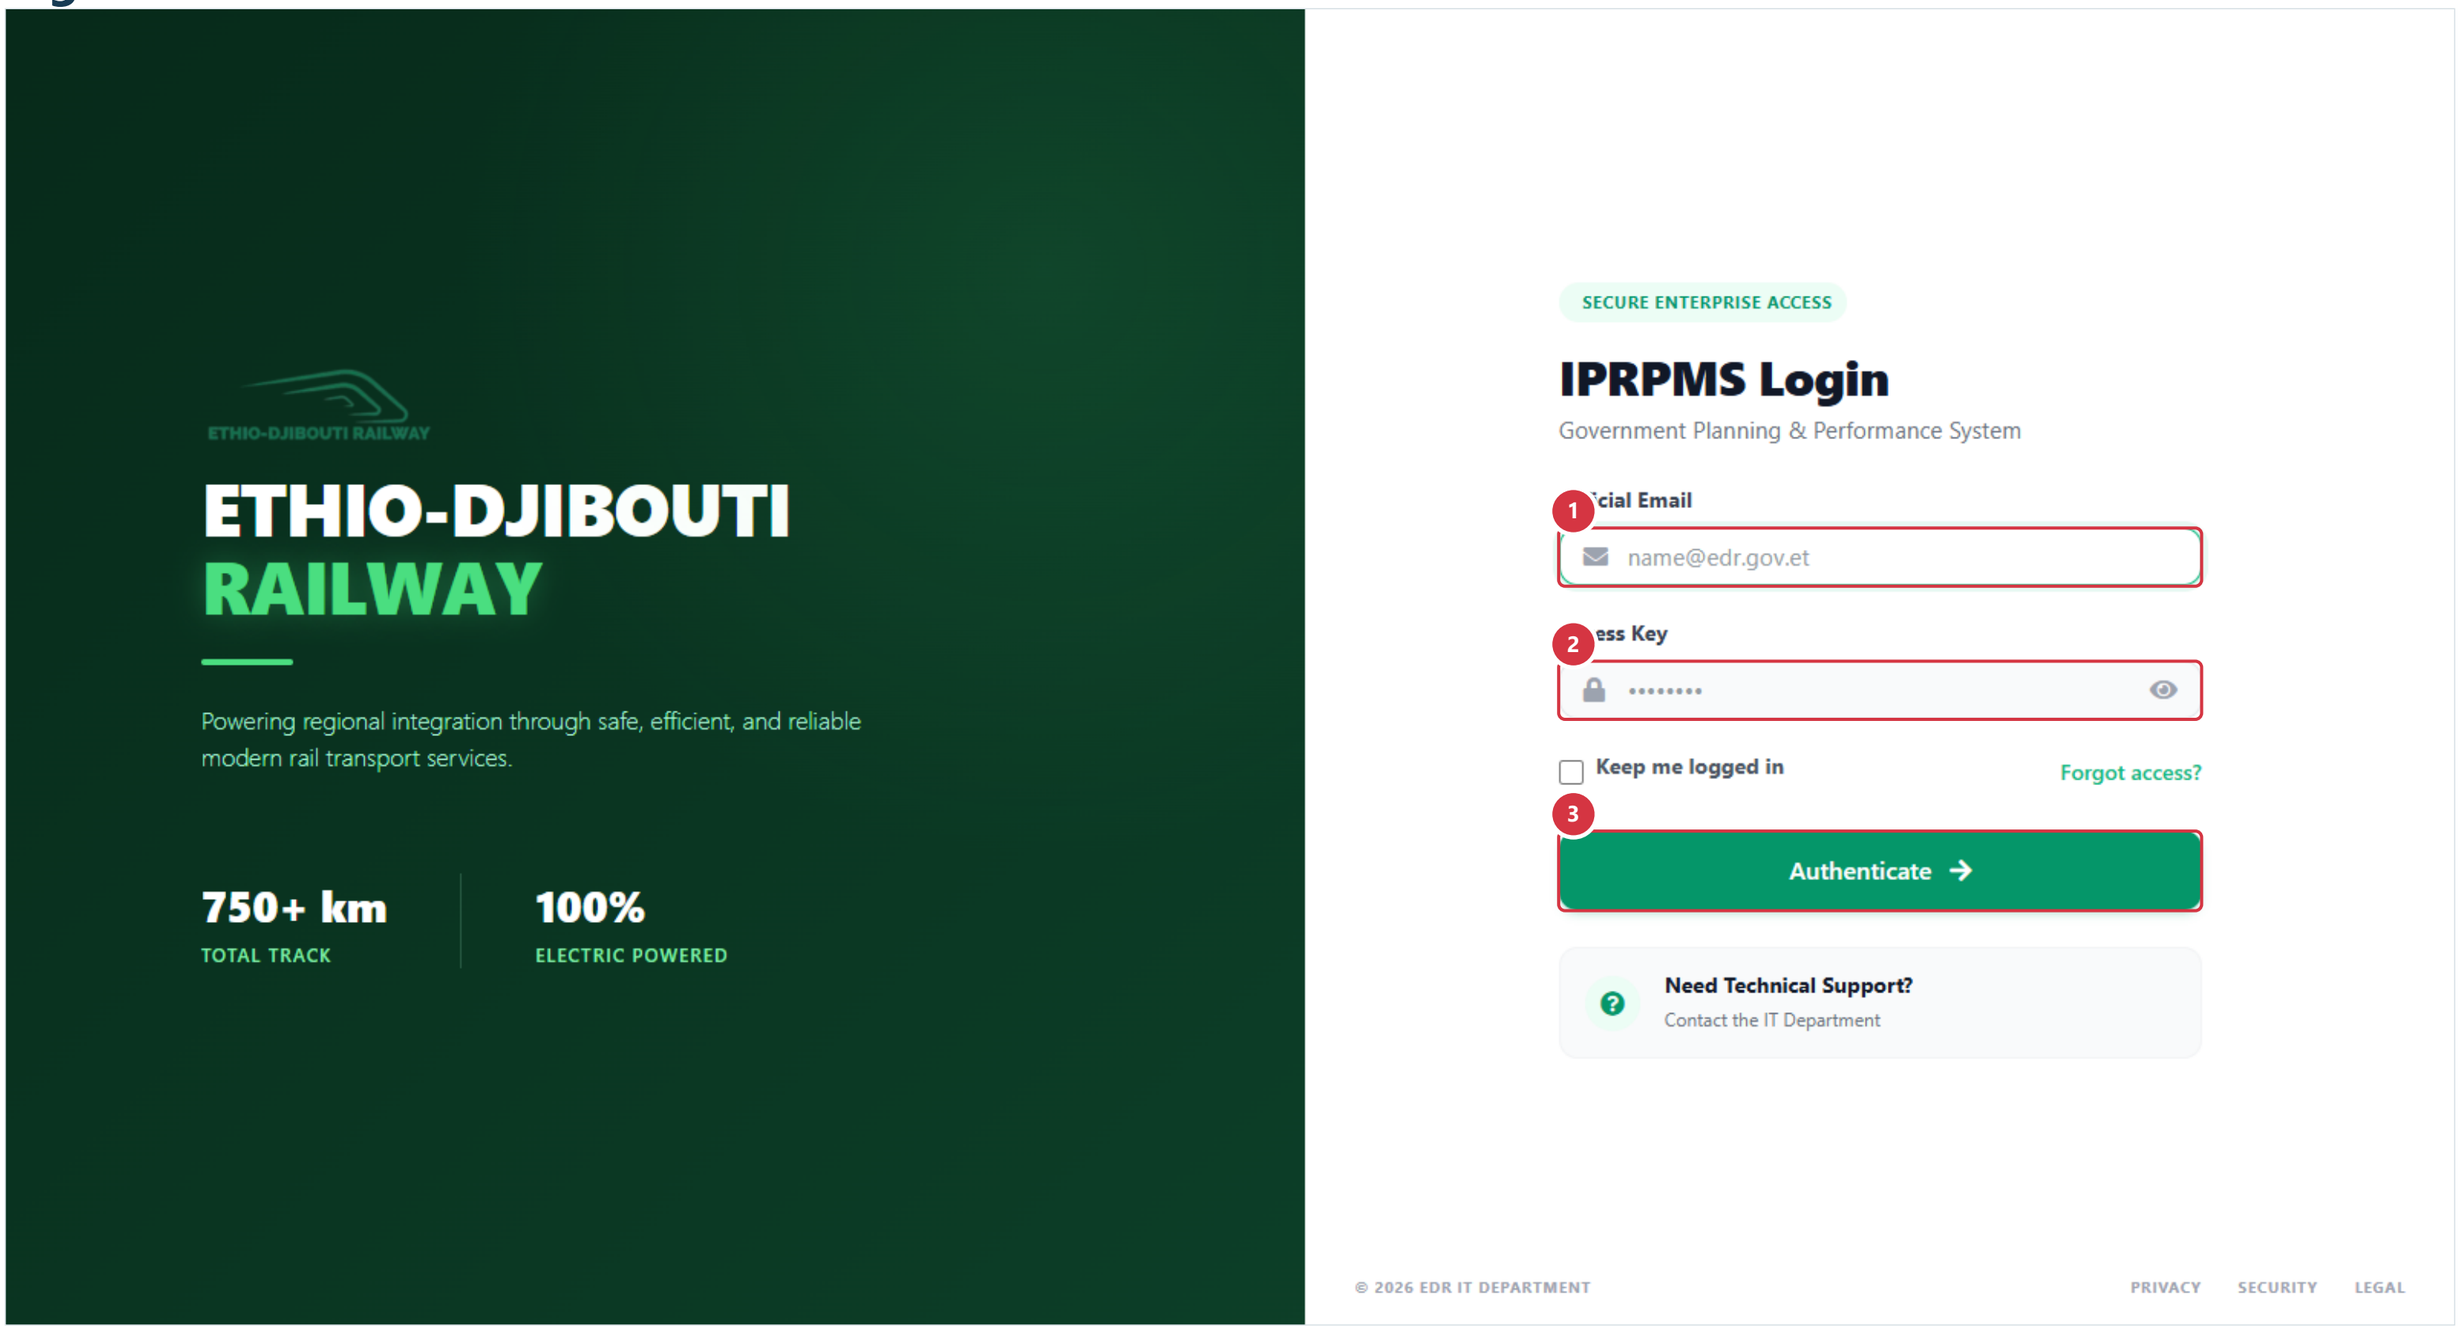

What to check

Check the name and role at the top right. Change your temporary password when prompted. Your profile is for your own name, email and password; department and role changes belong to the administrator.

How you know it worked

You can open the dashboard with the correct account. The notification bell shows work sent to you. On a shared computer, sign out when finished and do not choose Keep me logged in.

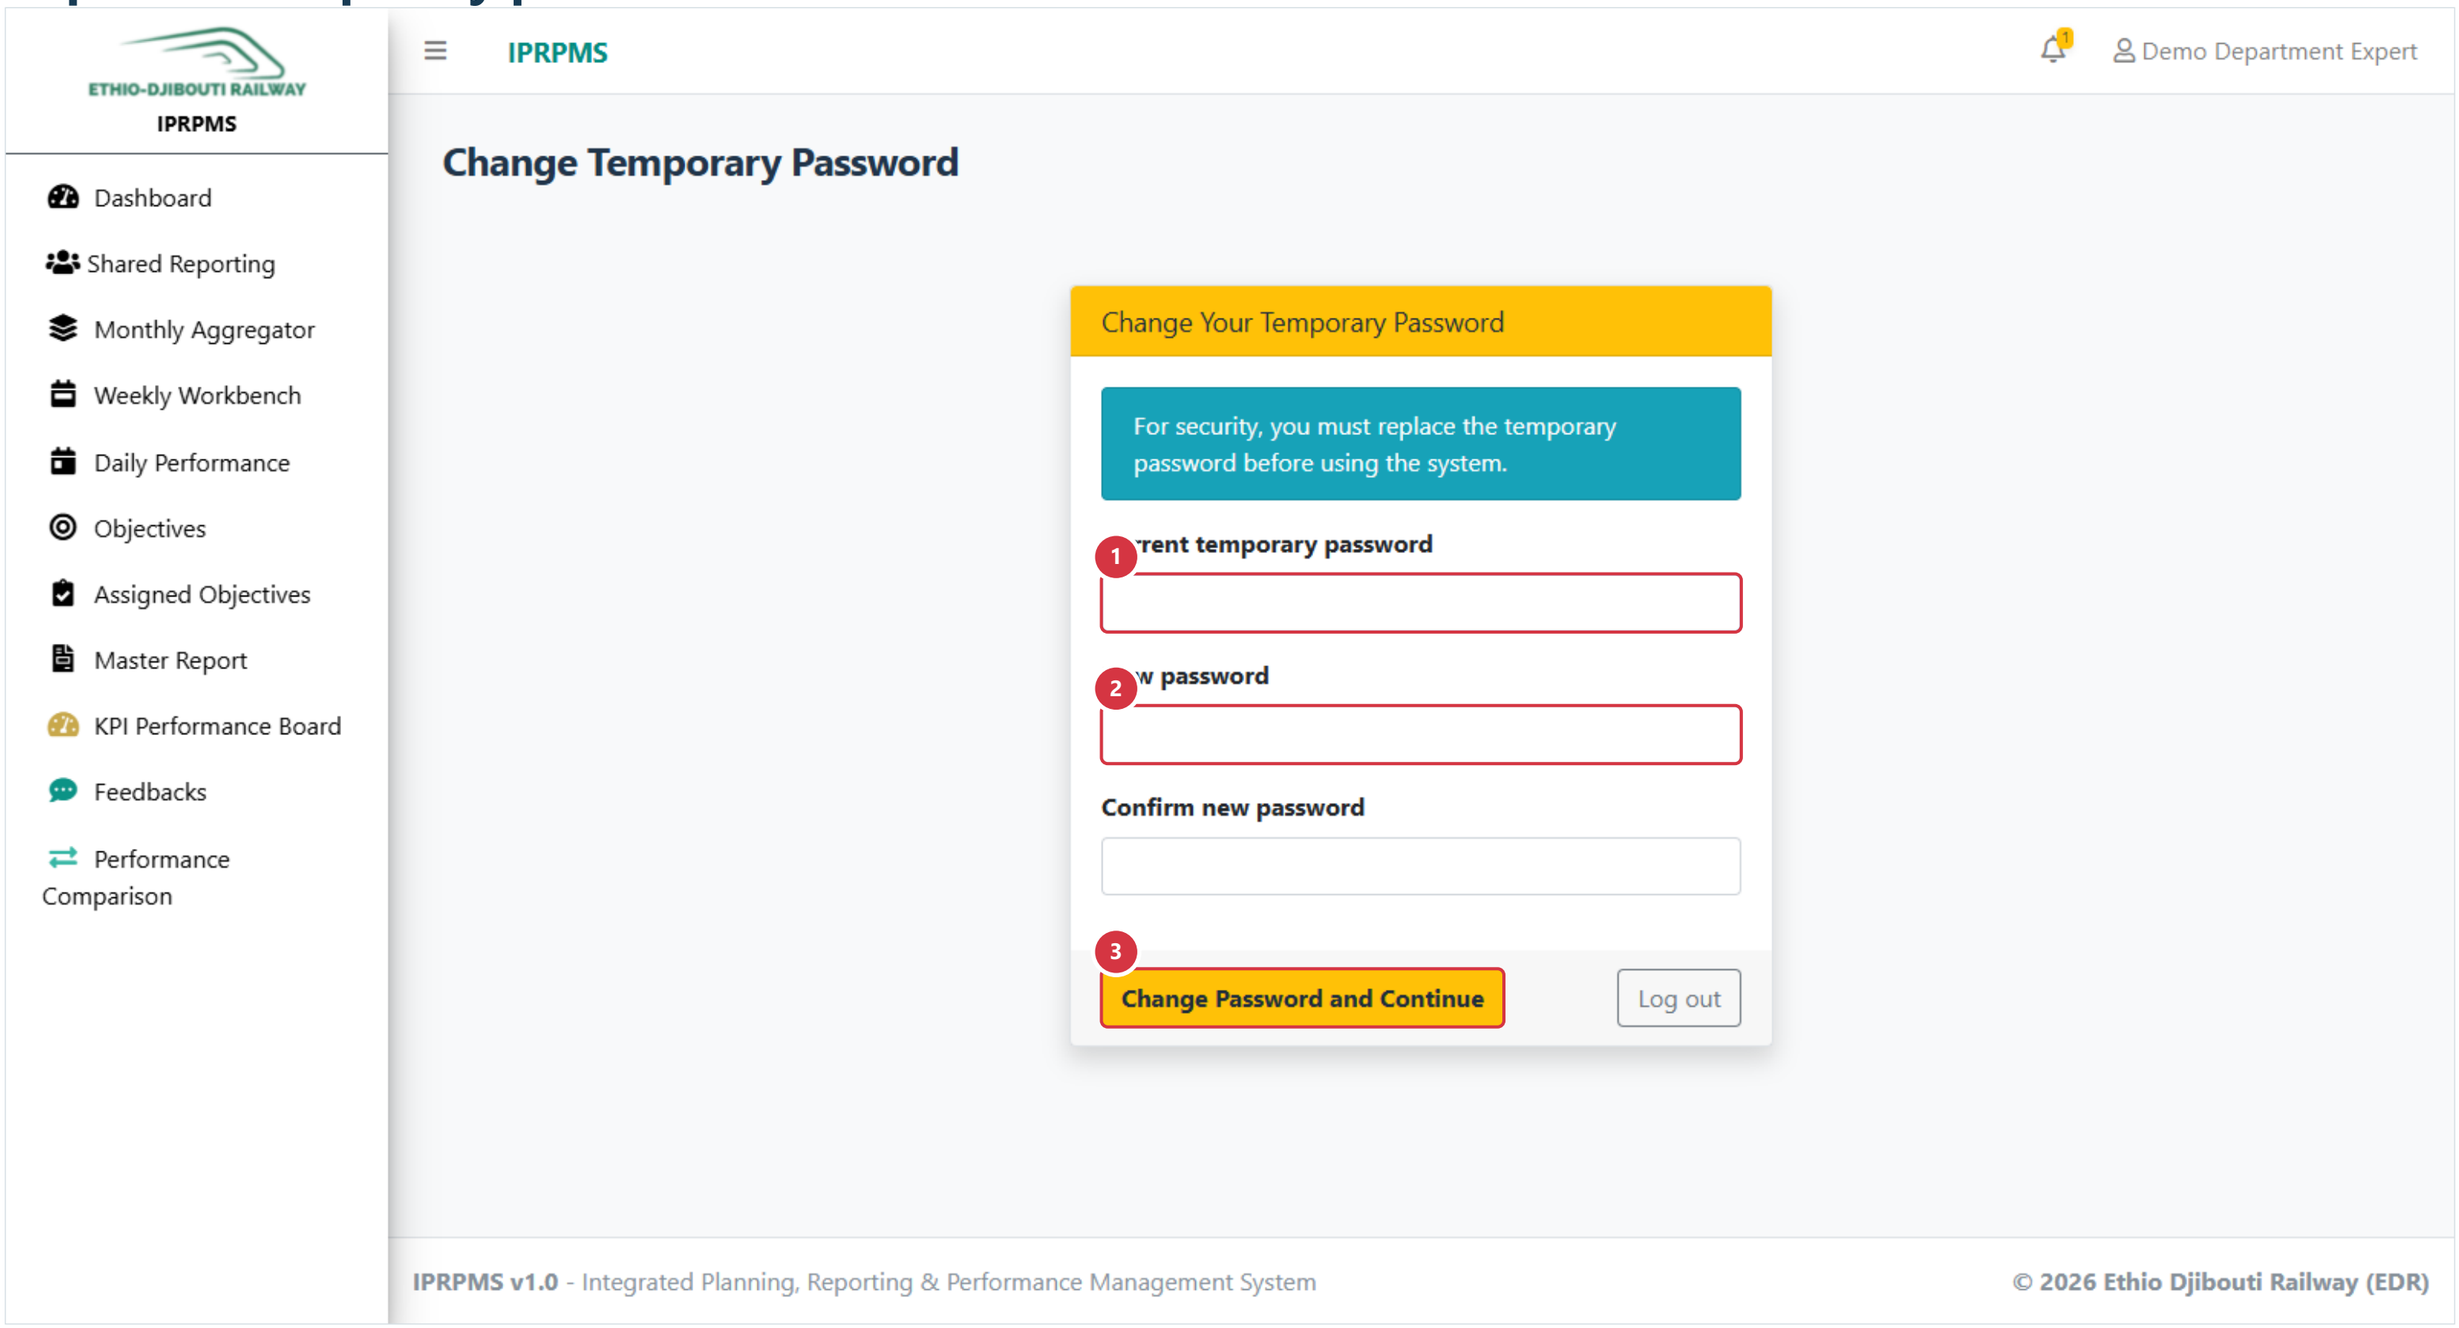

Sign in to IPRPMS

1. Enter your official email in Official Email.
2. Enter your own access key in Access Key.
3. Select Keep me logged in only on your own device, then click Authenticate.

After this step: The dashboard opens after authentication. Password fields in this handbook remain blank.

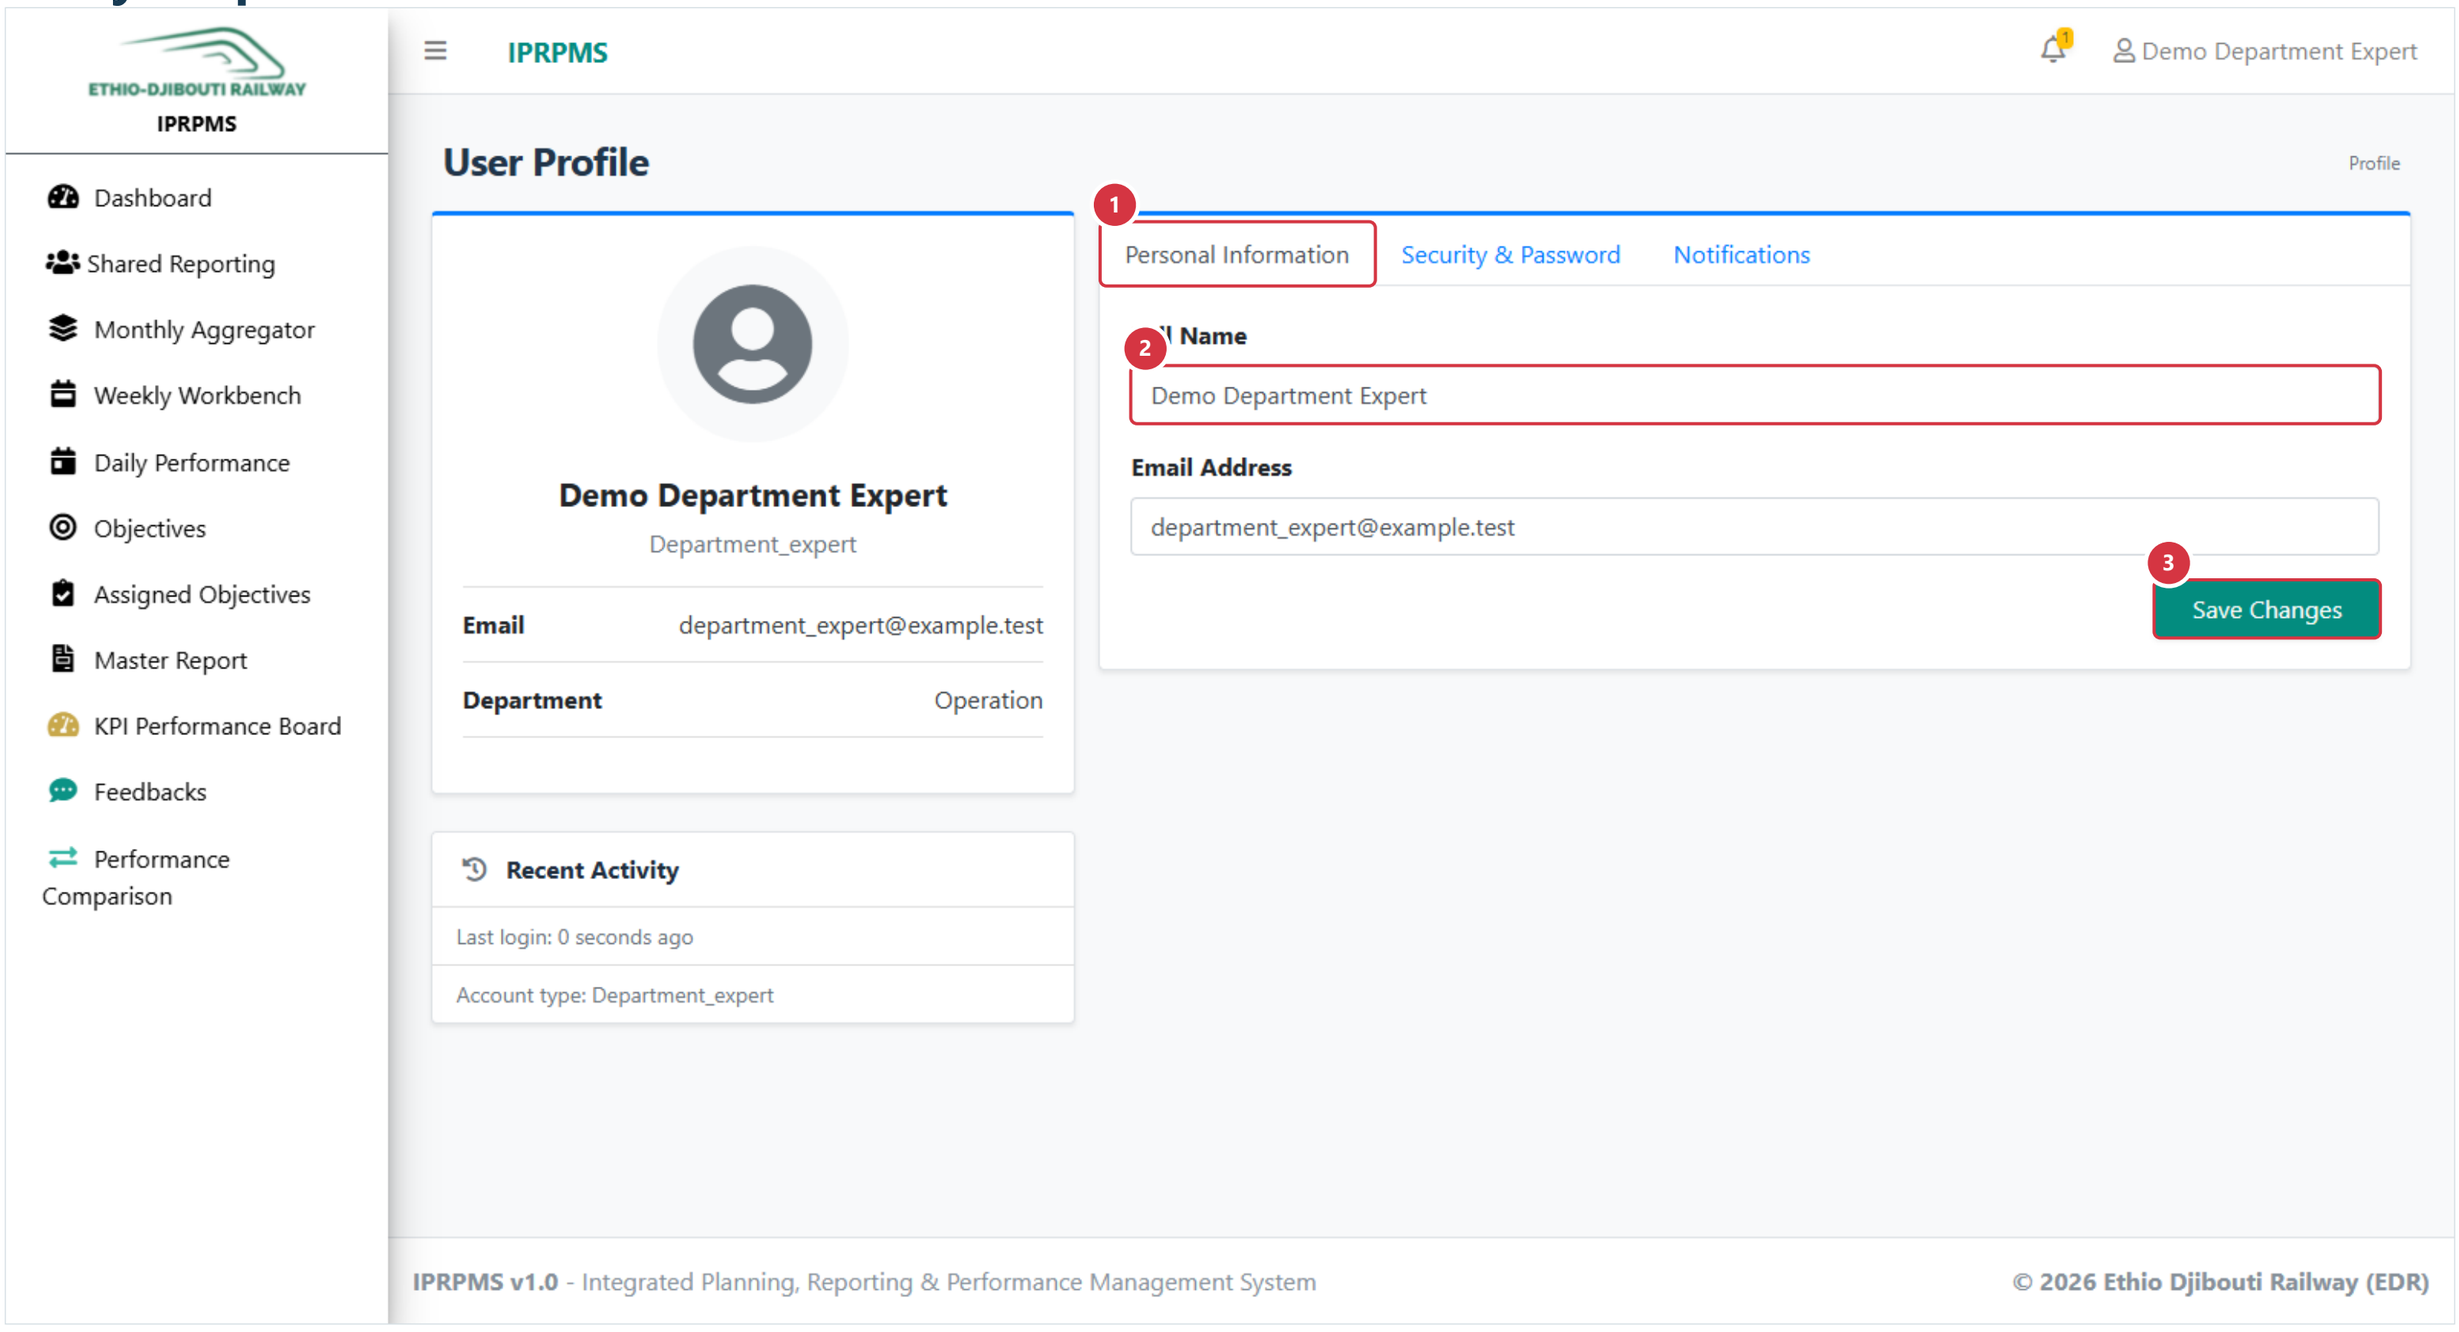

Replace a temporary password

1. Enter the current temporary password.
2. Enter a new private password and repeat it in Confirm new password.
3. Click Change Password and Continue.

After this step: This screen appears when the administrator requires a first password change.

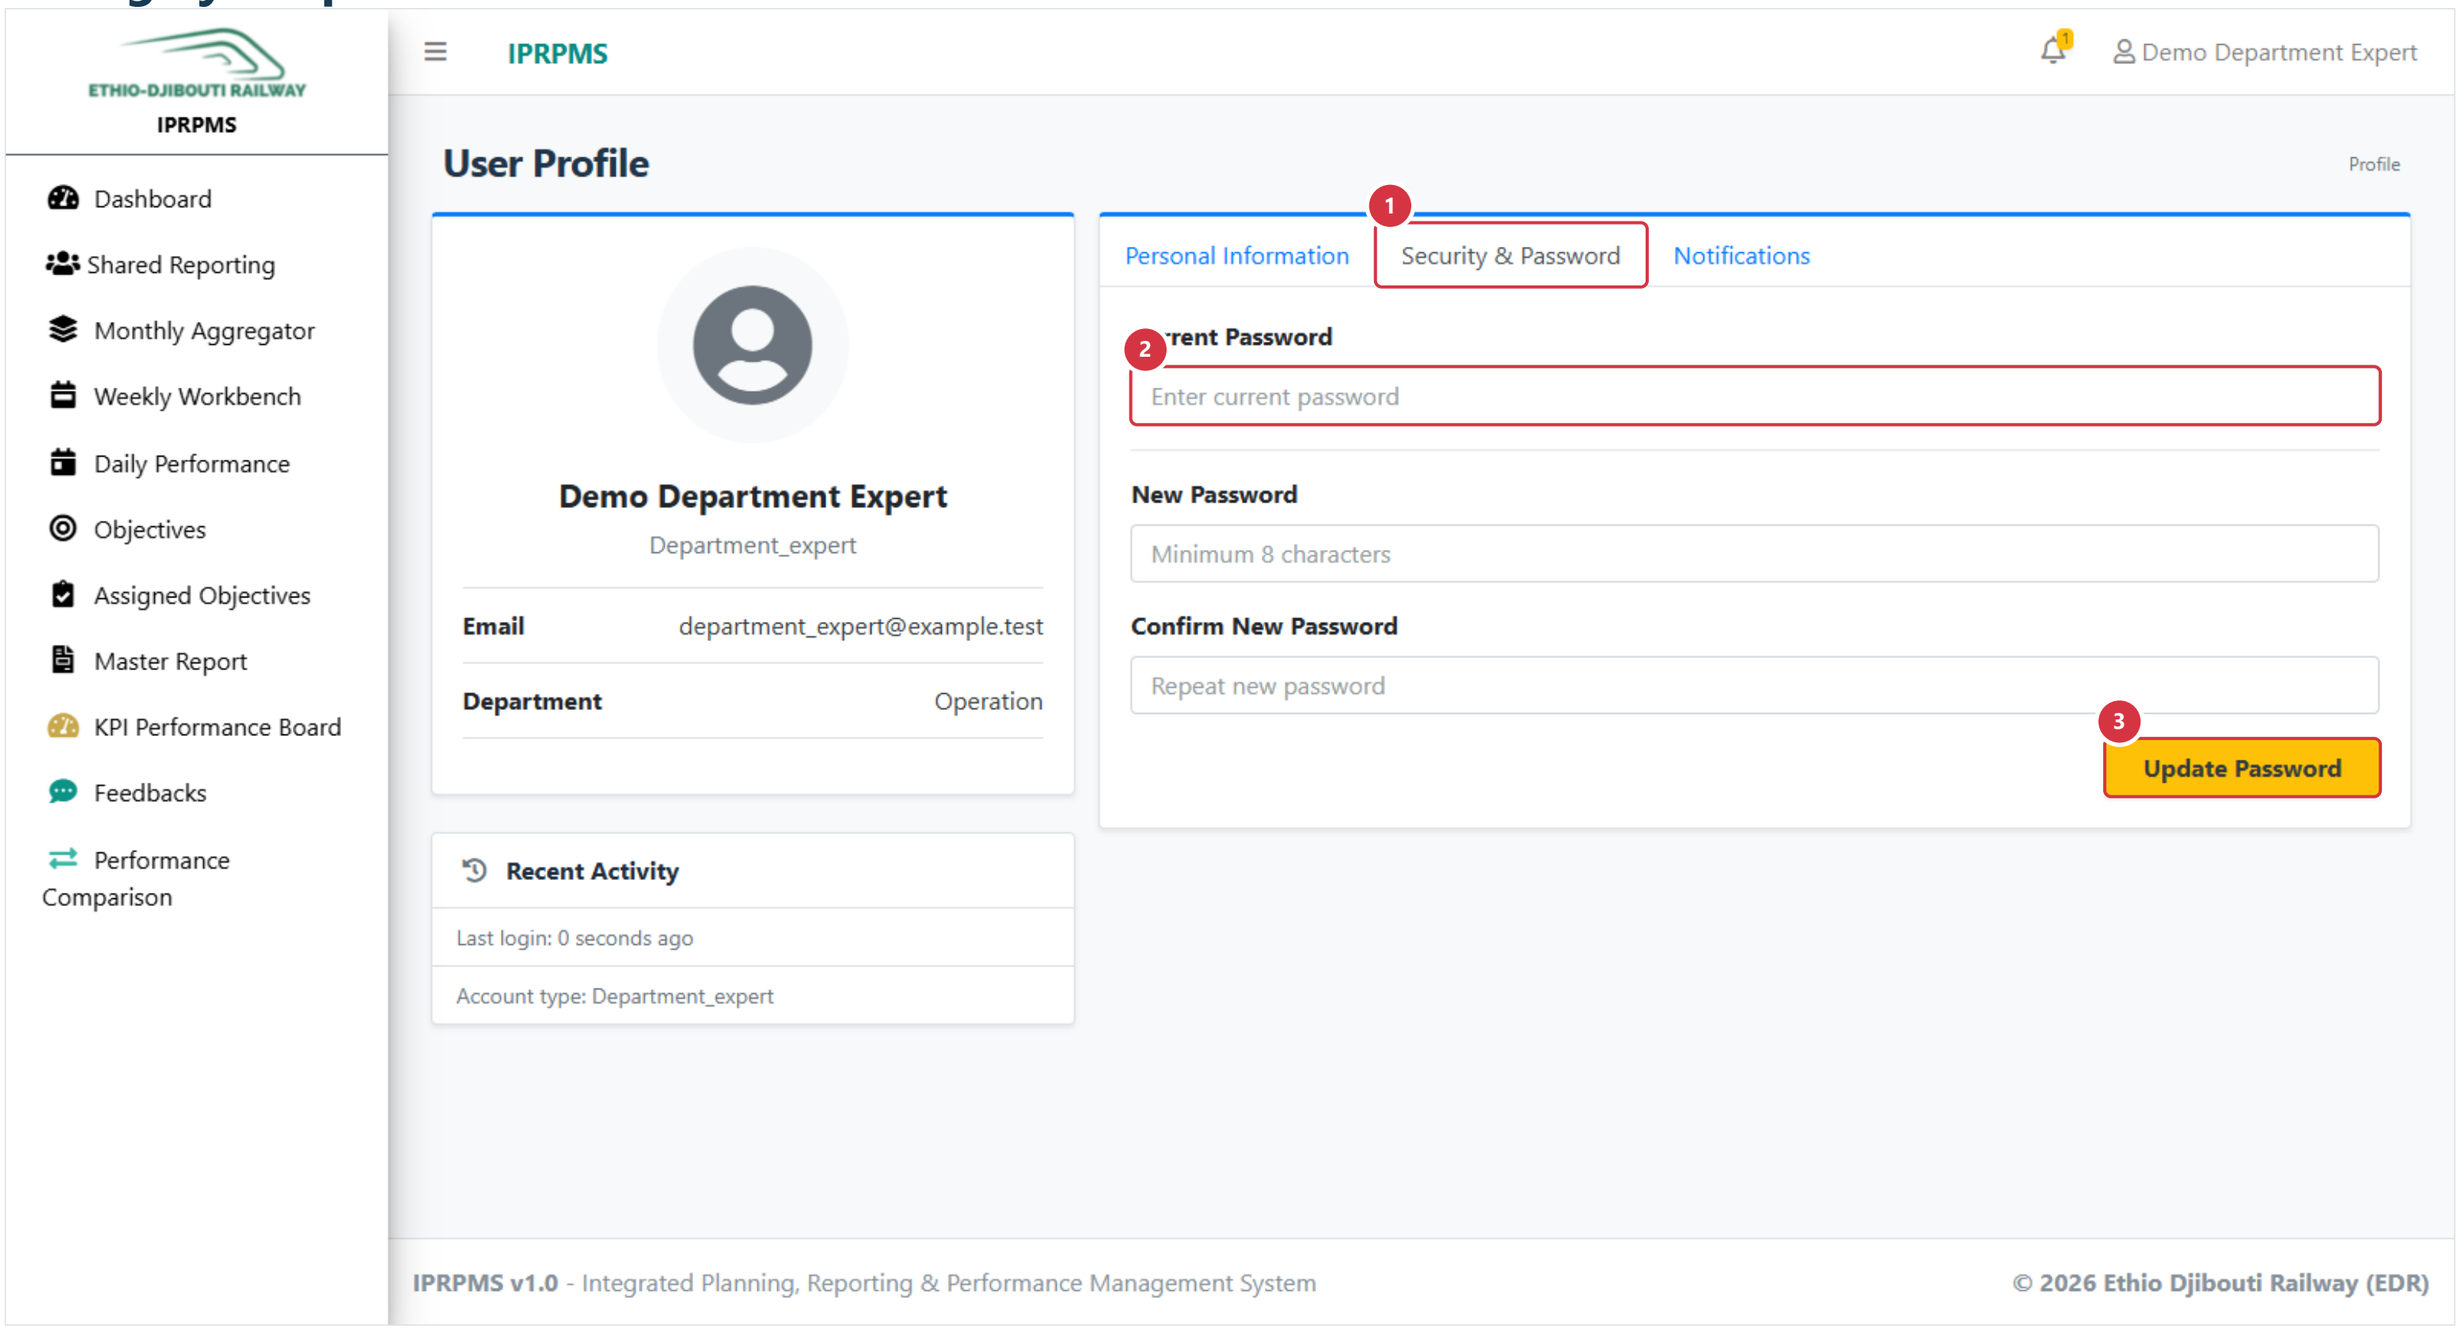

Edit your personal information

1. Click Personal Information in Profile.
2. Update Full Name or Email Address.
3. Click Save Changes and confirm the success message.

After this step: Department and role assignments are managed by the administrator, not through this form.

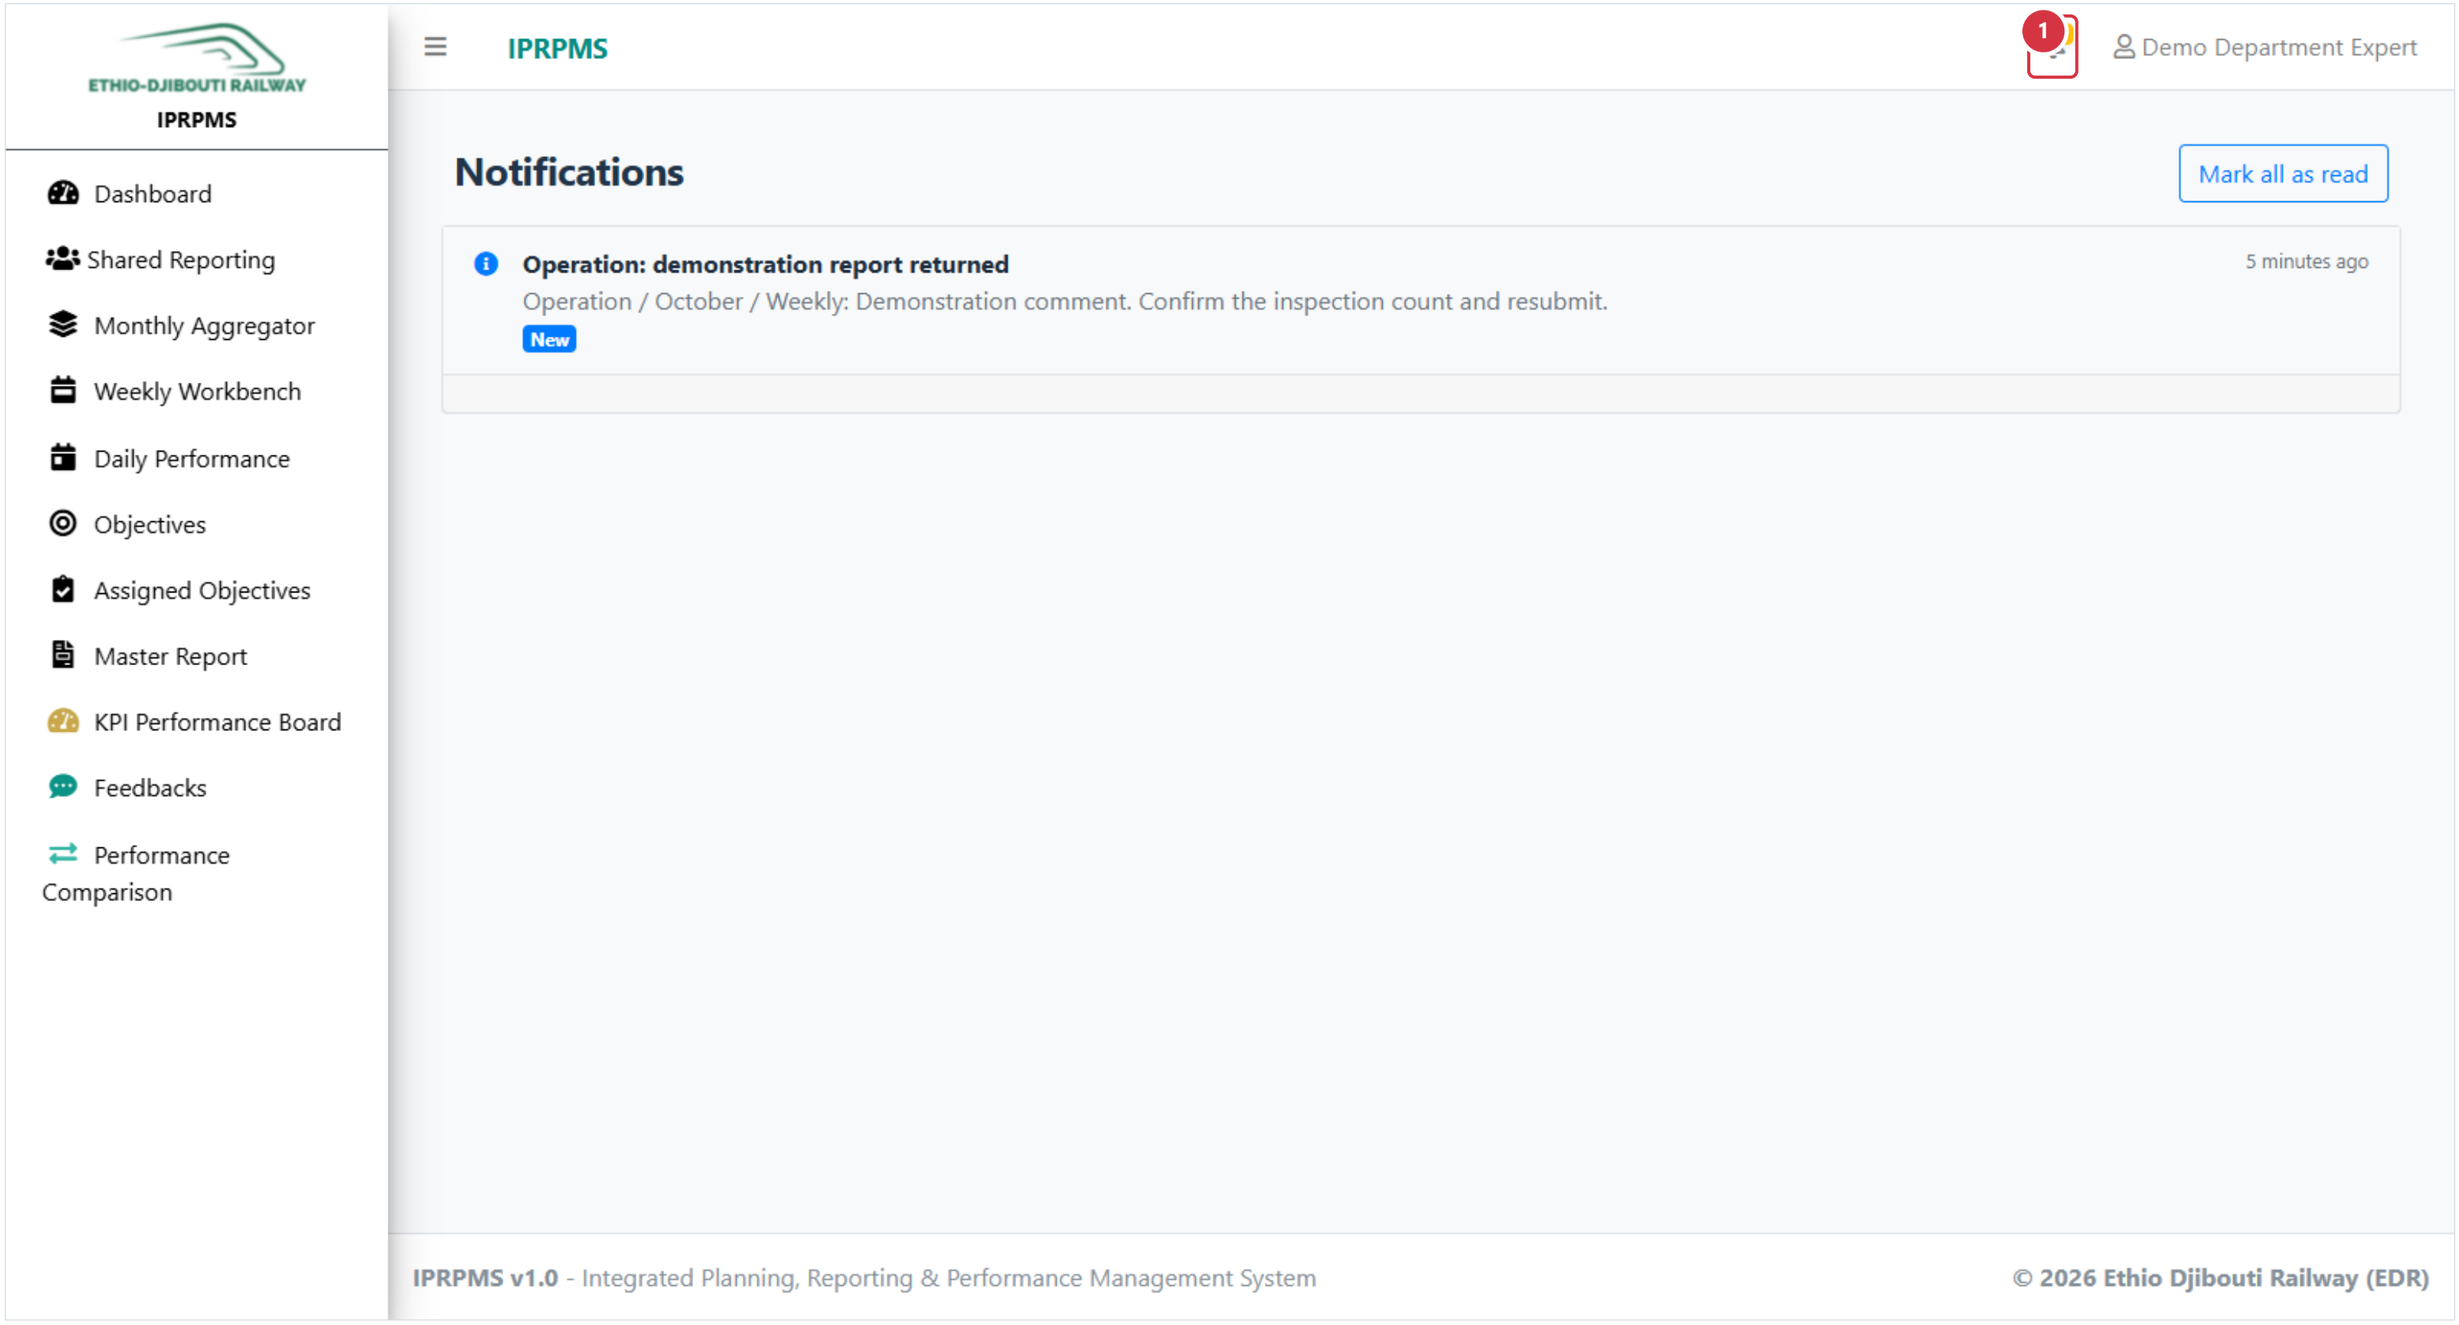

Change your password

1. Click Security & Password.
2. Enter your current password, a new password and its confirmation.
3. Click Update Password.

After this step: Use a private password. The fields are deliberately empty in this training capture.

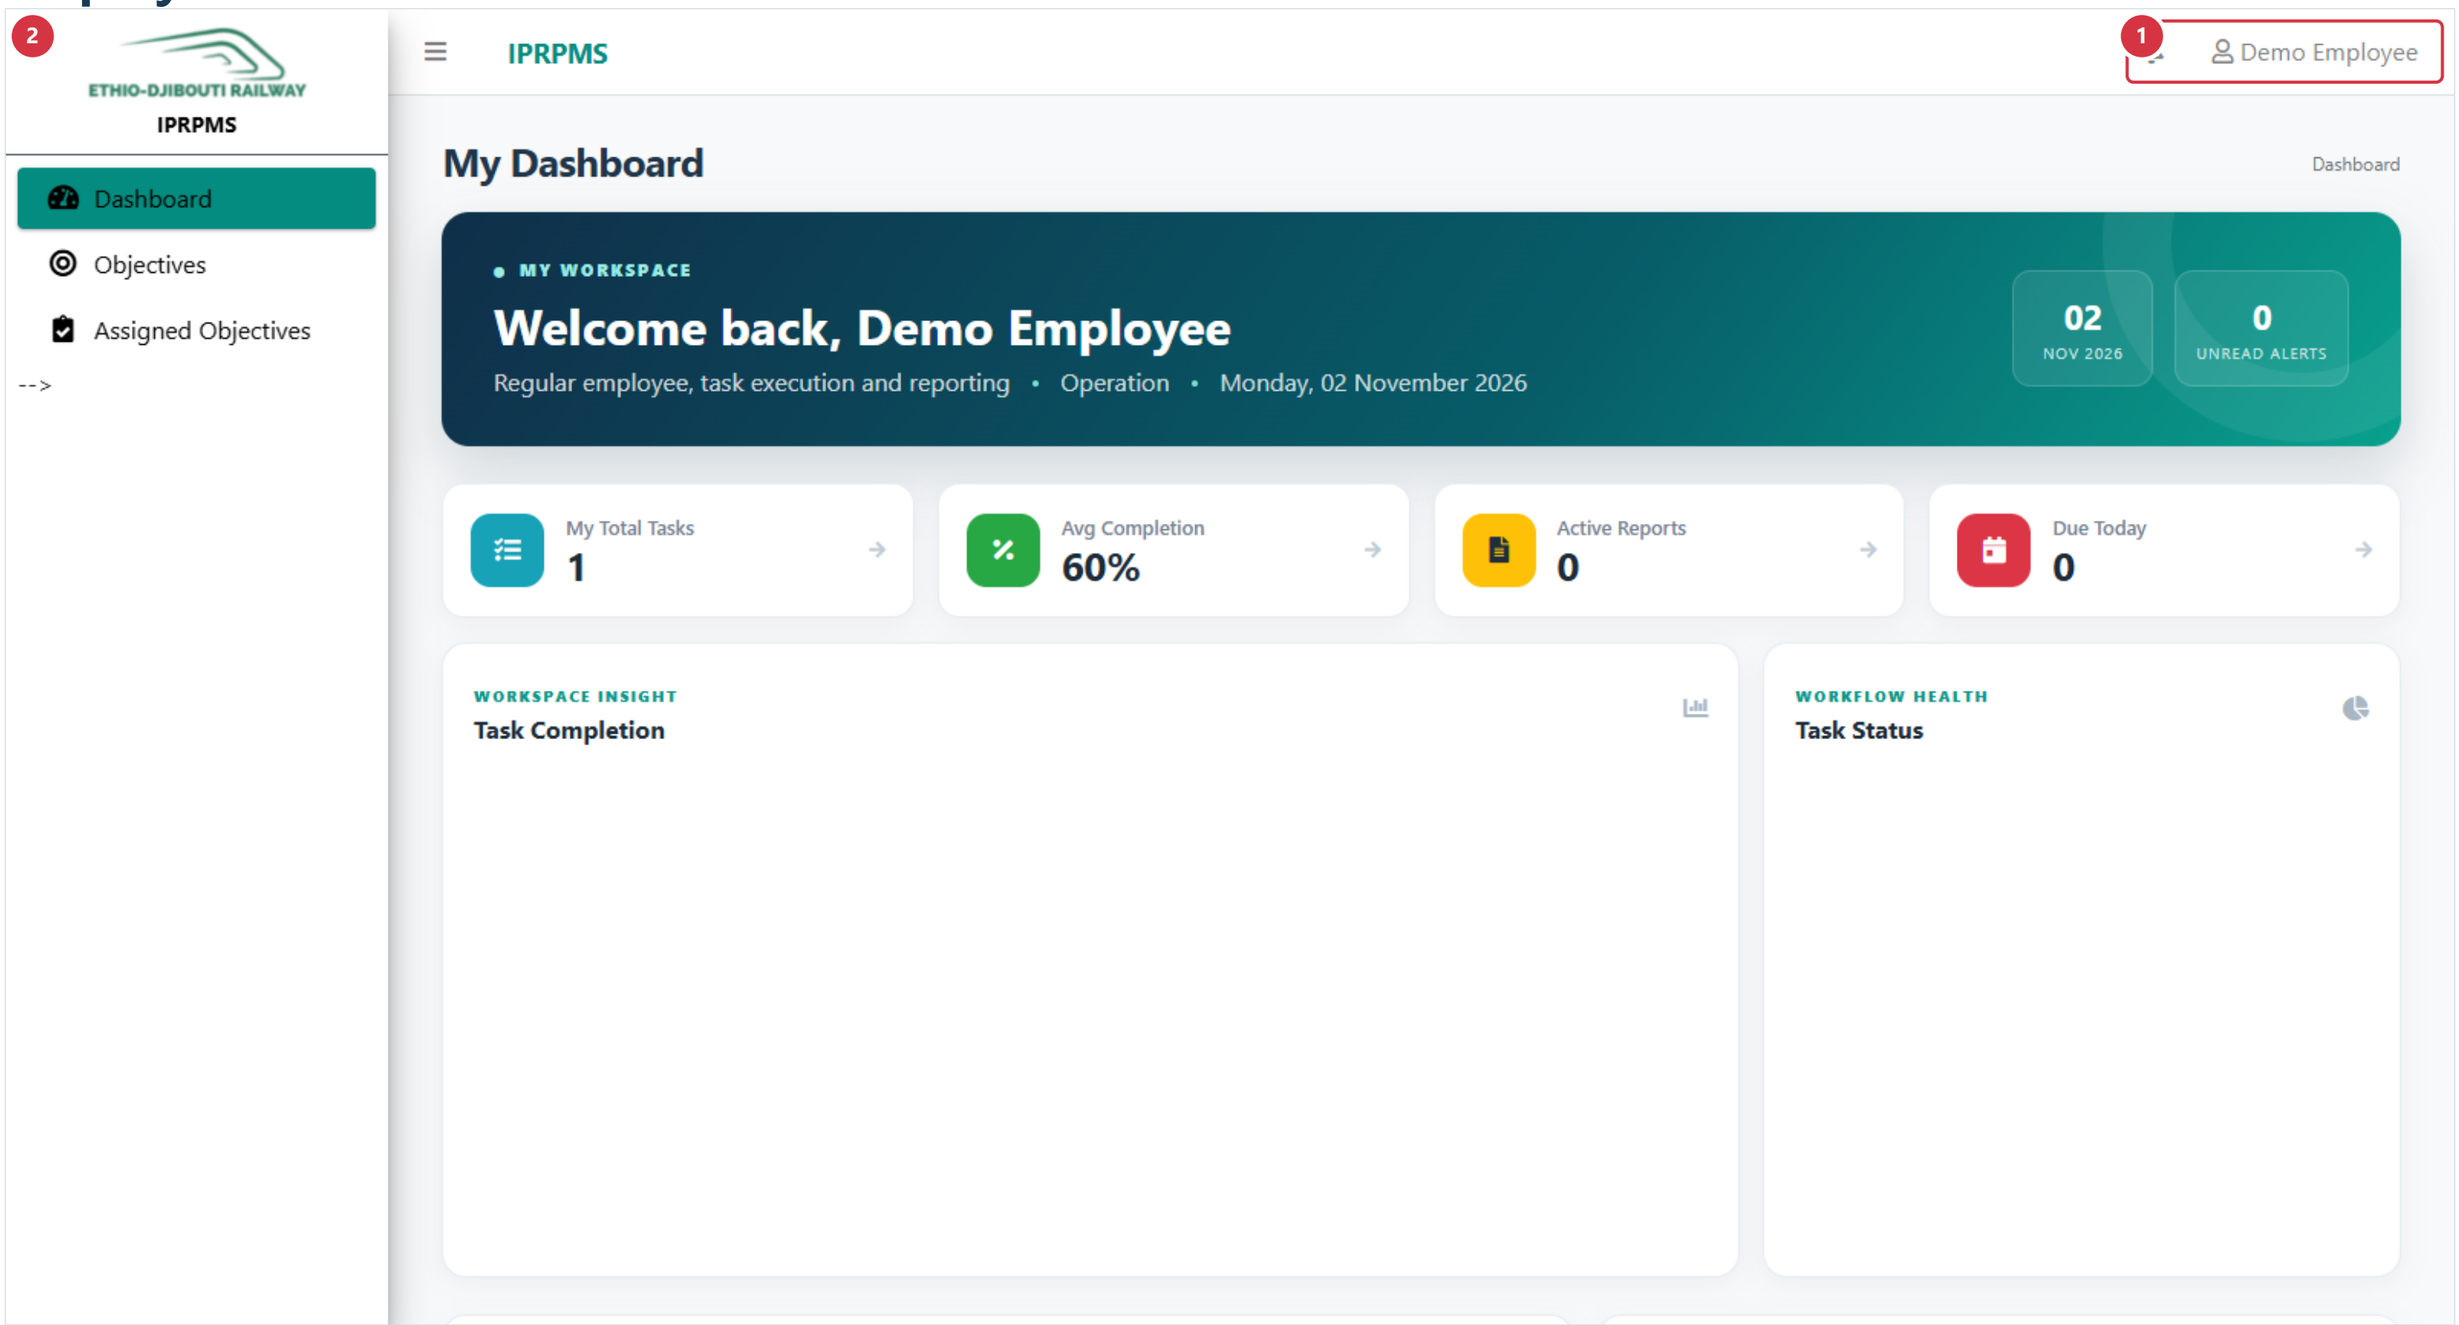

Read workflow notifications

1. Open the notification bell or Notifications page.
2. Read the department, period, action and review comment.
3. Open the linked record or mark the notice read after acting on it.

After this step: Marking a notification read does not approve, correct or submit the underlying record.

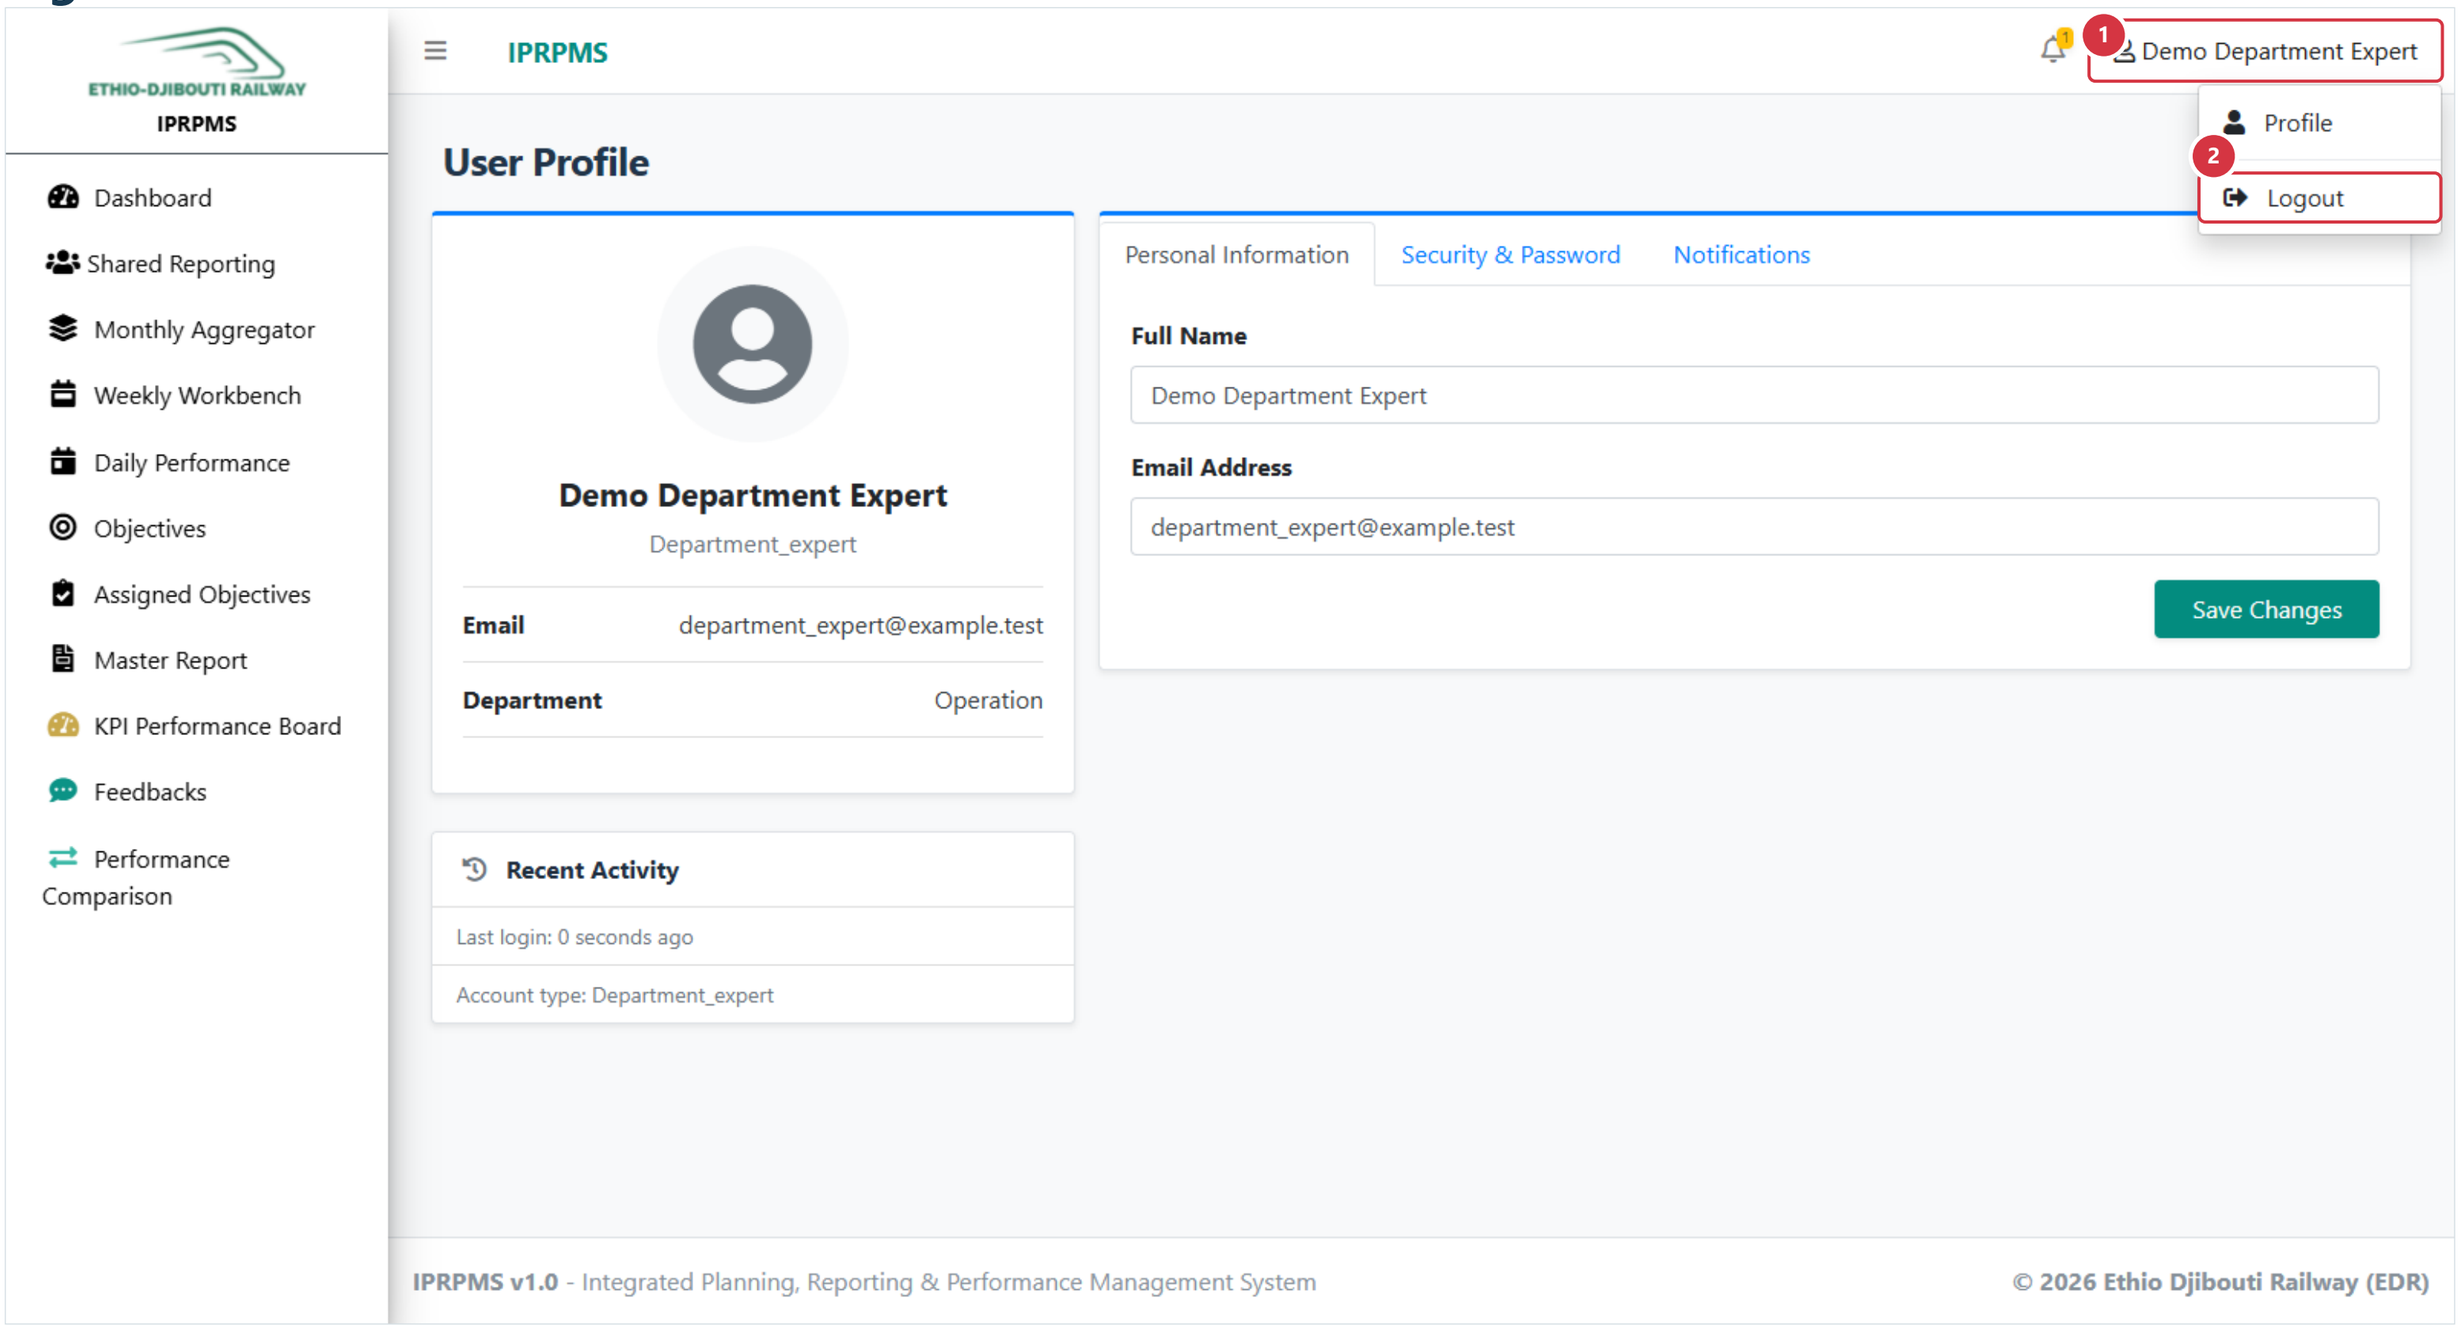

Employee: home screen

1. Confirm your signed-in role at the top right.
2. Open your assigned work from the permitted Tasks or dashboard controls.
3. My Tasks and task details currently return errors in this build. Contact the administrator before using the task-report workflow.

After this step: Menus vary by permission, department and reporting frequency.

Sign out on a shared device

1. Click your name at the top right to open the user menu.
2. Click Logout after you finish your work.

After this step: The application returns to the sign-in screen after logout.

Before you finish, check these four things

Finish means your part is complete and you know who has the next action. It does not always mean the whole record is finally approved.

Your completion checklist

1. I know my task, supervisor and deadline. 2. I retained evidence of the work actually performed. 3. I reported access errors instead of inventing a successful submission. 4. I signed out on shared equipment.

If a menu or button is missing

No fabricated task-entry screenshots are included. The local task-detail issue must be fixed before step-by-step employee task reporting and task approval can be verified.

Ask for help with useful details

Give IT or the responsible reviewer the module, department, year, reporting period, objective or record reference and exact message. Include a safe screenshot. Never send your password.

Keep the process and data safe

Use your own account, save before sending, read return comments and keep the same record for corrections. Demonstration screenshots are teaching examples, not official performance figures. The separate logistics Import/Export module is excluded.
