Auditor

Your responsibilities, complete workflow, exact clicks and return paths.

Read first: the Start Here guide explains how the whole system works. Then use this manual to do your part, check the outcome and hand work to the right person.

Understand your job before the buttons

Keep this page in mind whenever you receive a new record. It explains your responsibility and where your part stops.

Your job

Inspect authorized records and their history, identify evidence-based exceptions and report them without changing the underlying business data.

What you receive

An audit scope, reporting period, relevant record references and read-only access to permitted records and audit activity.

Who receives your work

Findings to the accountable business owner or administrator with the department, period, record, evidence and required clarification.

Your limits and important distinctions

Read-only audit access is not approval authority. An audit-log entry shows a recorded action; use the business record and evidence as well before concluding what happened.

Your workflow, from first action to finish

Read down the page. Each step has an outcome; do not jump ahead simply because a button is visible.

1

Define the audit question

Choose the department, year, reporting period and record type to inspect.

2

Check the record status

Distinguish draft, submitted, returned and finally approved results before relying on a number.

3

Inspect supporting evidence

Read the unit, target, actual, source department, comments and available attachments.

4

Trace recorded activity

Use Audit Logs to review actor, action, affected record and time.

5

Document a precise finding

State what differs, the supporting evidence and who should respond; do not edit the result yourself.

6

Follow up the correction

Review the same record after the responsible owner follows the approved correction workflow. Protect personal information in any exported evidence.

Find the task you need

Use the page number or click a task name in the PDF. Section introductions explain the purpose before the screen-by-screen actions.

First access and everyday account safety 5

Inspect recorded audit activity 11

Completion checklist and help 17

First access and everyday account safety

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Use your own account. Your department and role decide what you can see and which decisions you can make. Never use somebody else's account to reach a missing button.

Before you click

Have your official account details ready. Open the address supplied by IT, enter your email and Access Key, then click Authenticate. A first-password screen appears only when your account requires it.

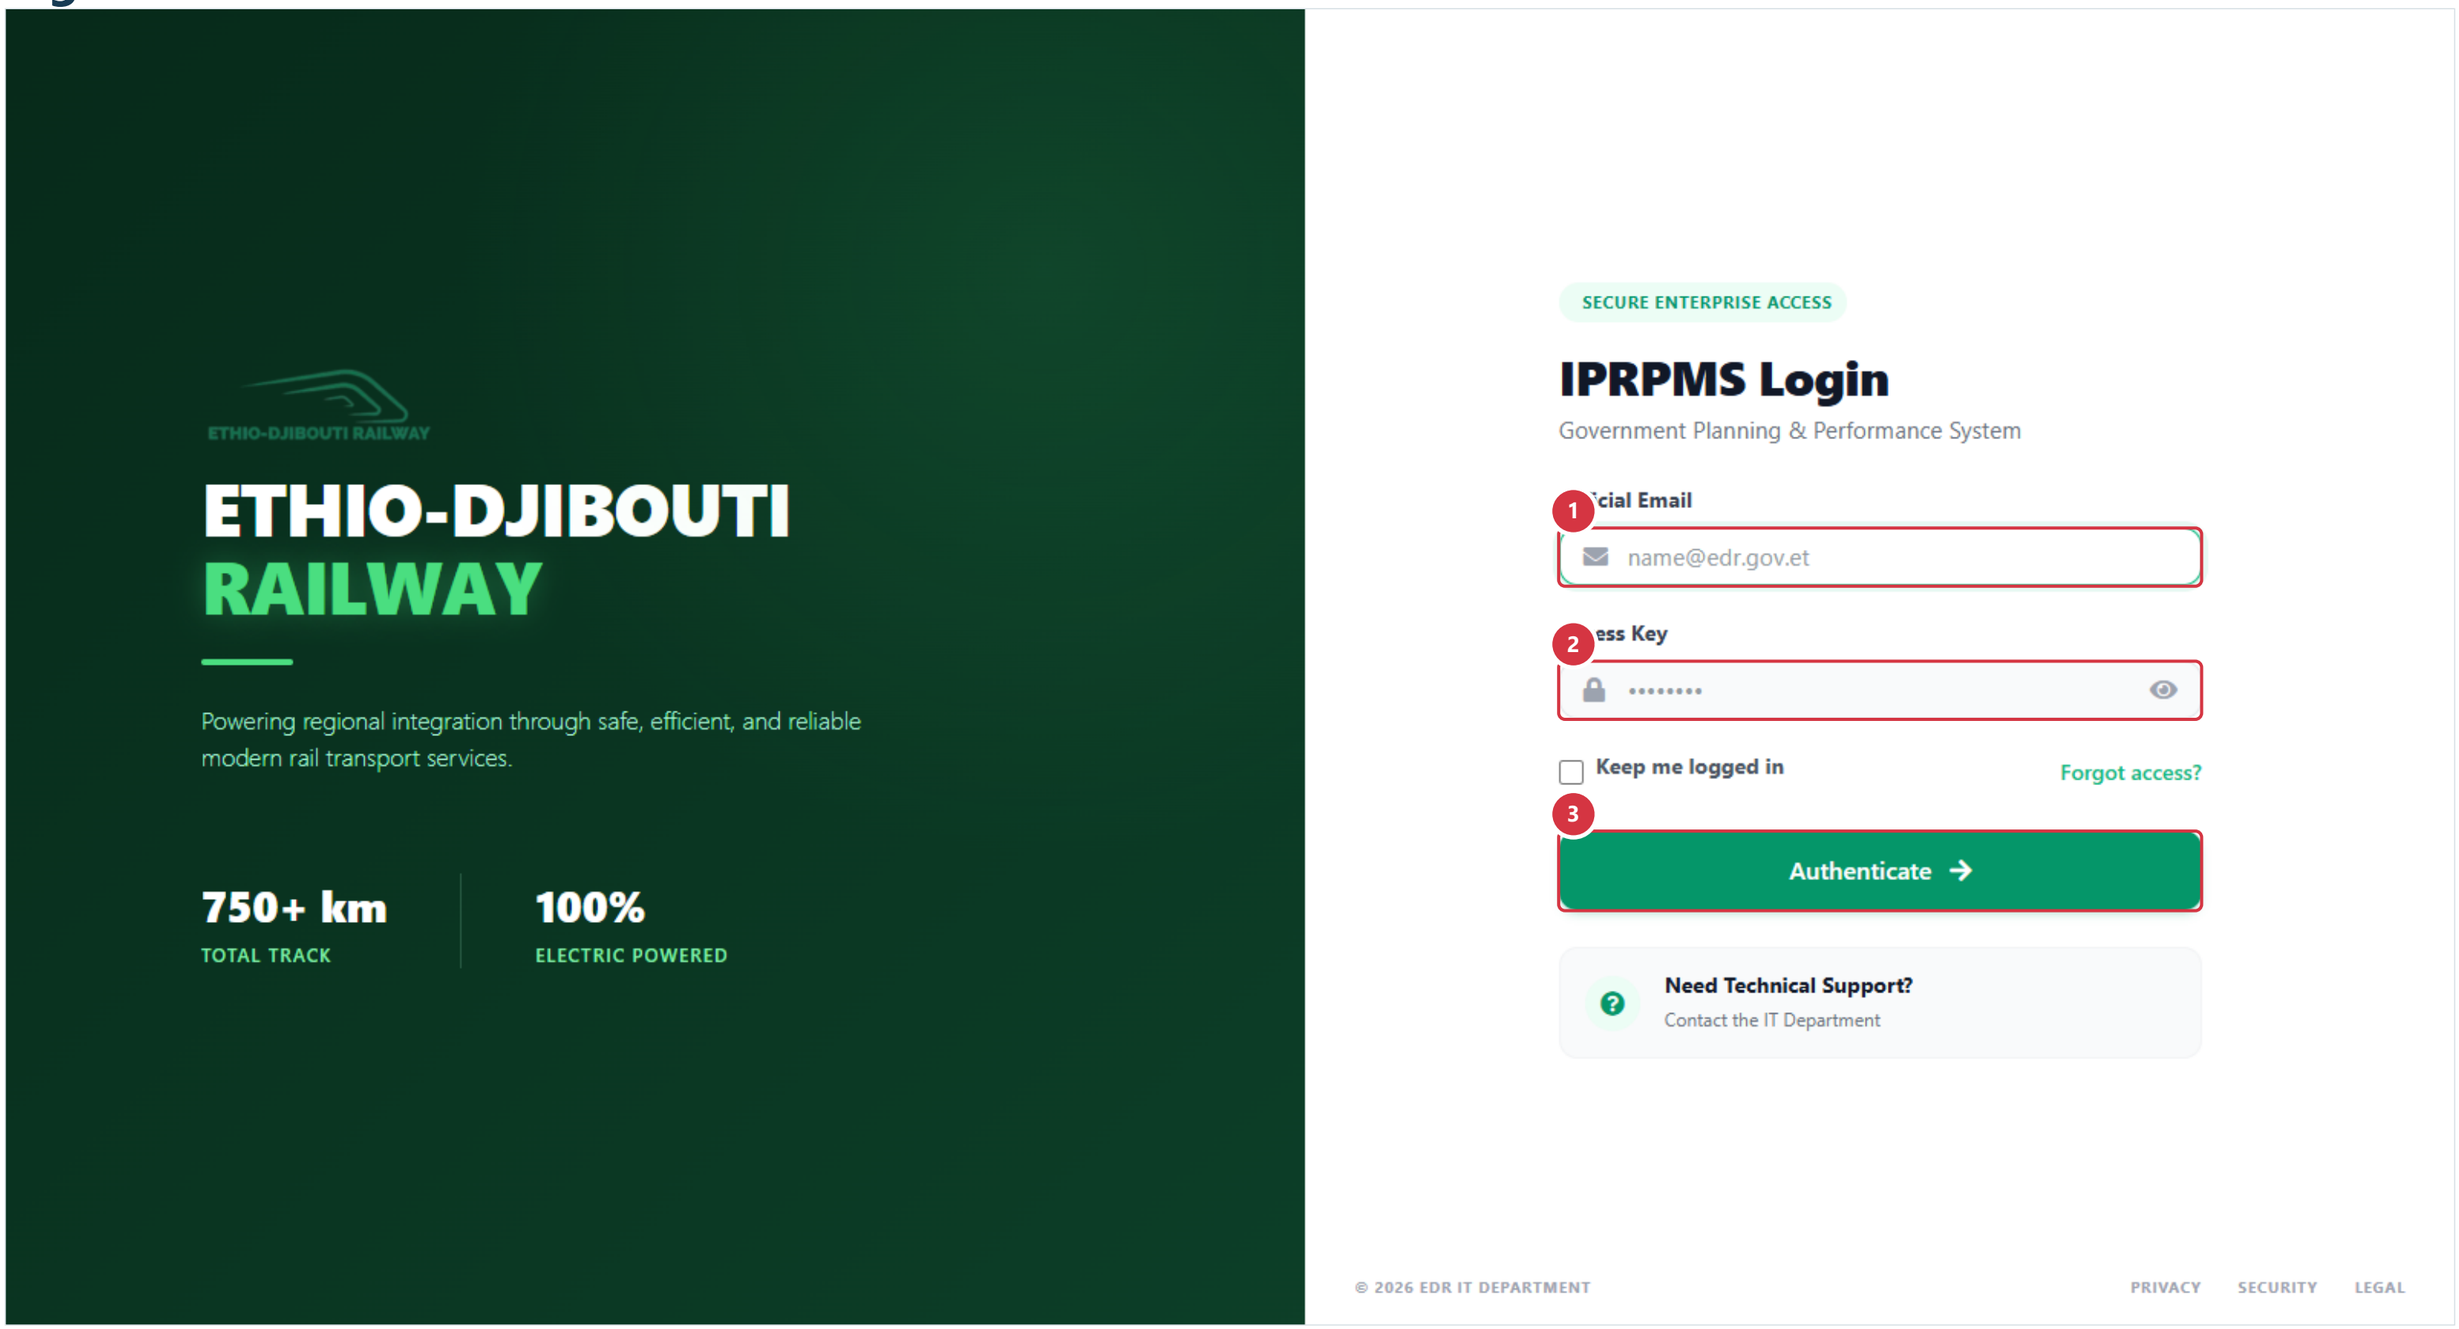

What to check

Check the name and role at the top right. Change your temporary password when prompted. Your profile is for your own name, email and password; department and role changes belong to the administrator.

How you know it worked

You can open the dashboard with the correct account. The notification bell shows work sent to you. On a shared computer, sign out when finished and do not choose Keep me logged in.

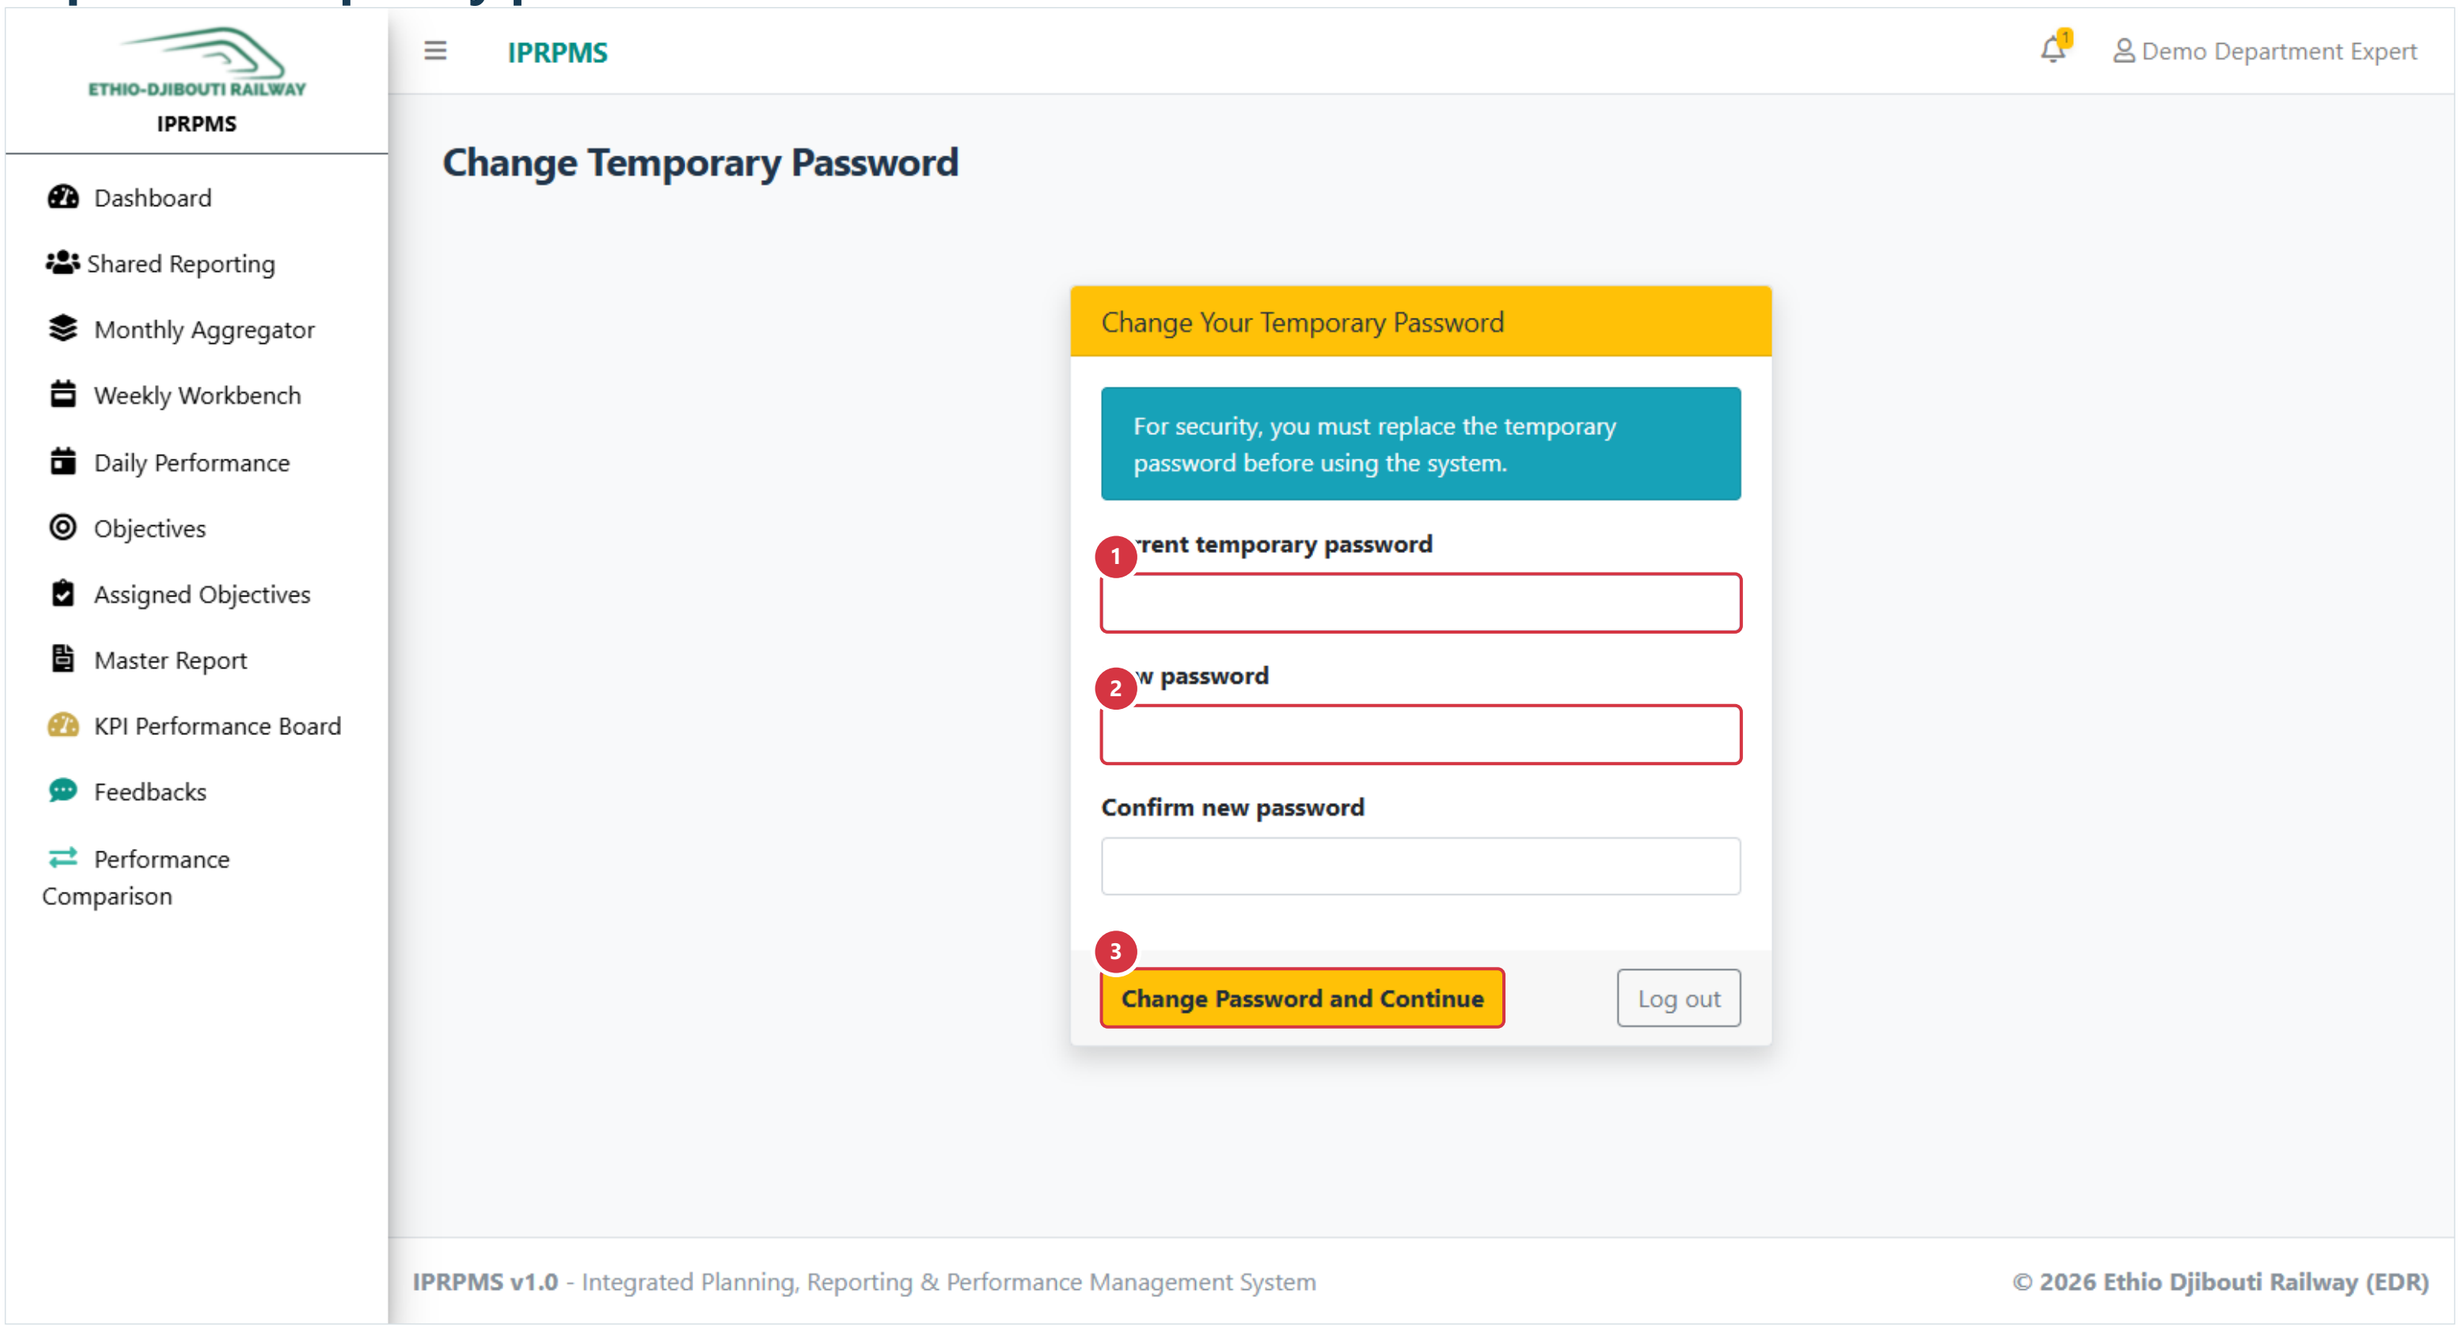

Sign in to IPRPMS

1. Enter your official email in Official Email.
2. Enter your own access key in Access Key.
3. Select Keep me logged in only on your own device, then click Authenticate.

After this step: The dashboard opens after authentication. Password fields in this handbook remain blank.

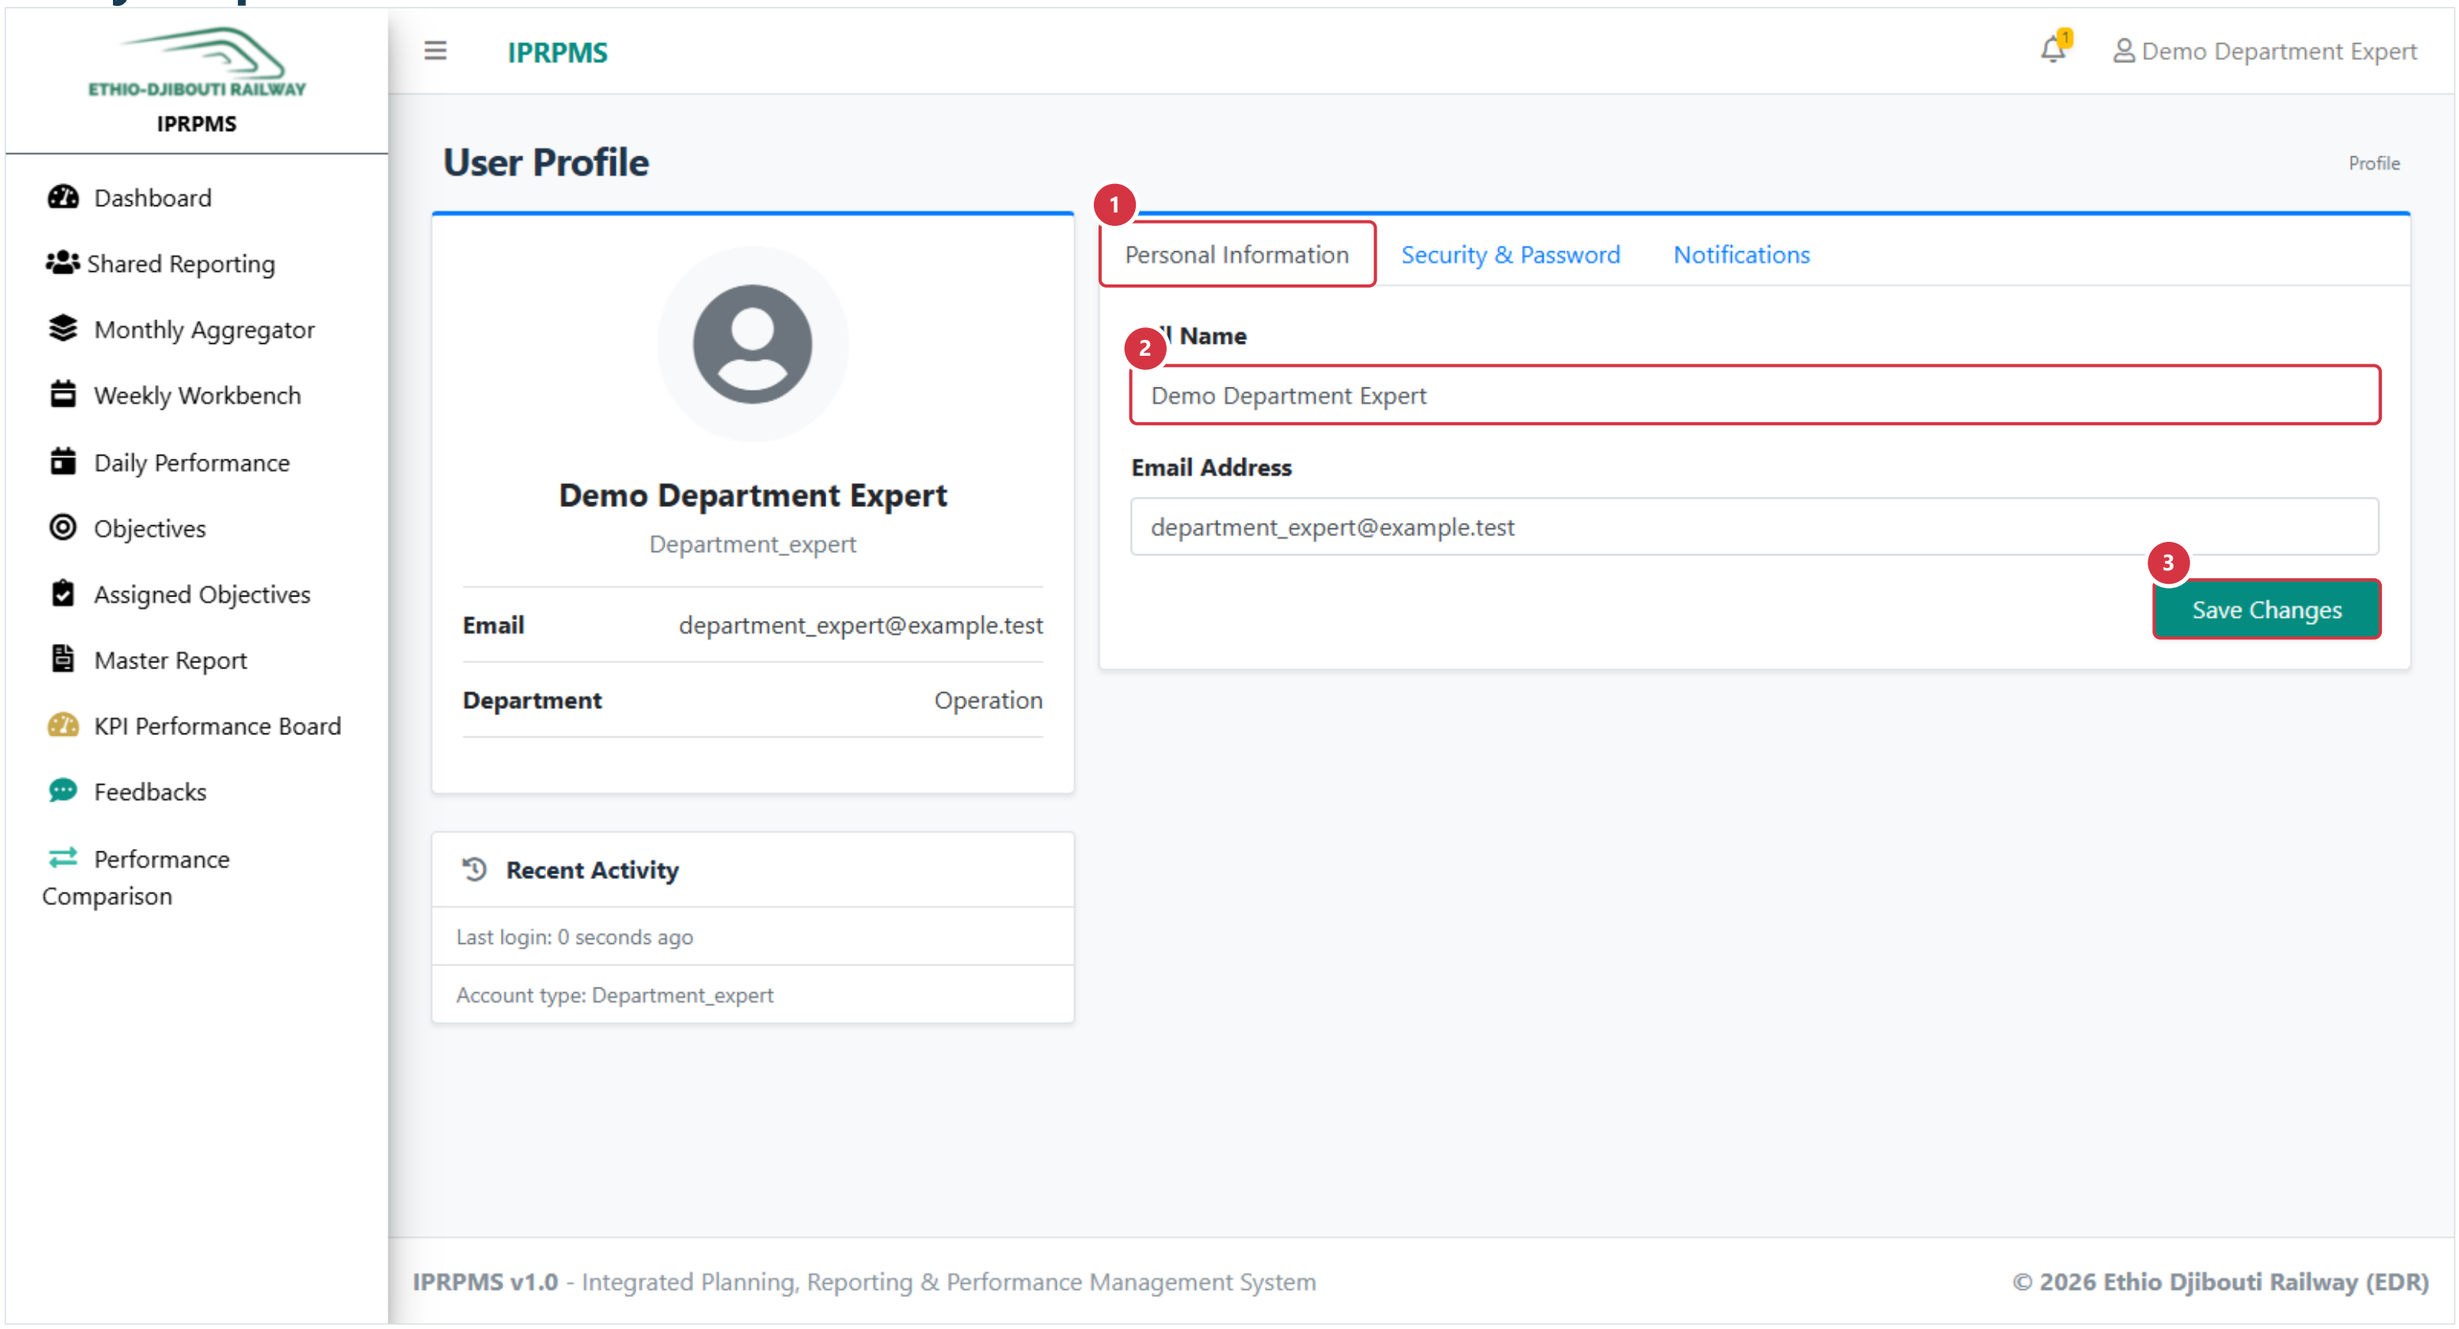

Replace a temporary password

1. Enter the current temporary password.
2. Enter a new private password and repeat it in Confirm new password.
3. Click Change Password and Continue.

After this step: This screen appears when the administrator requires a first password change.

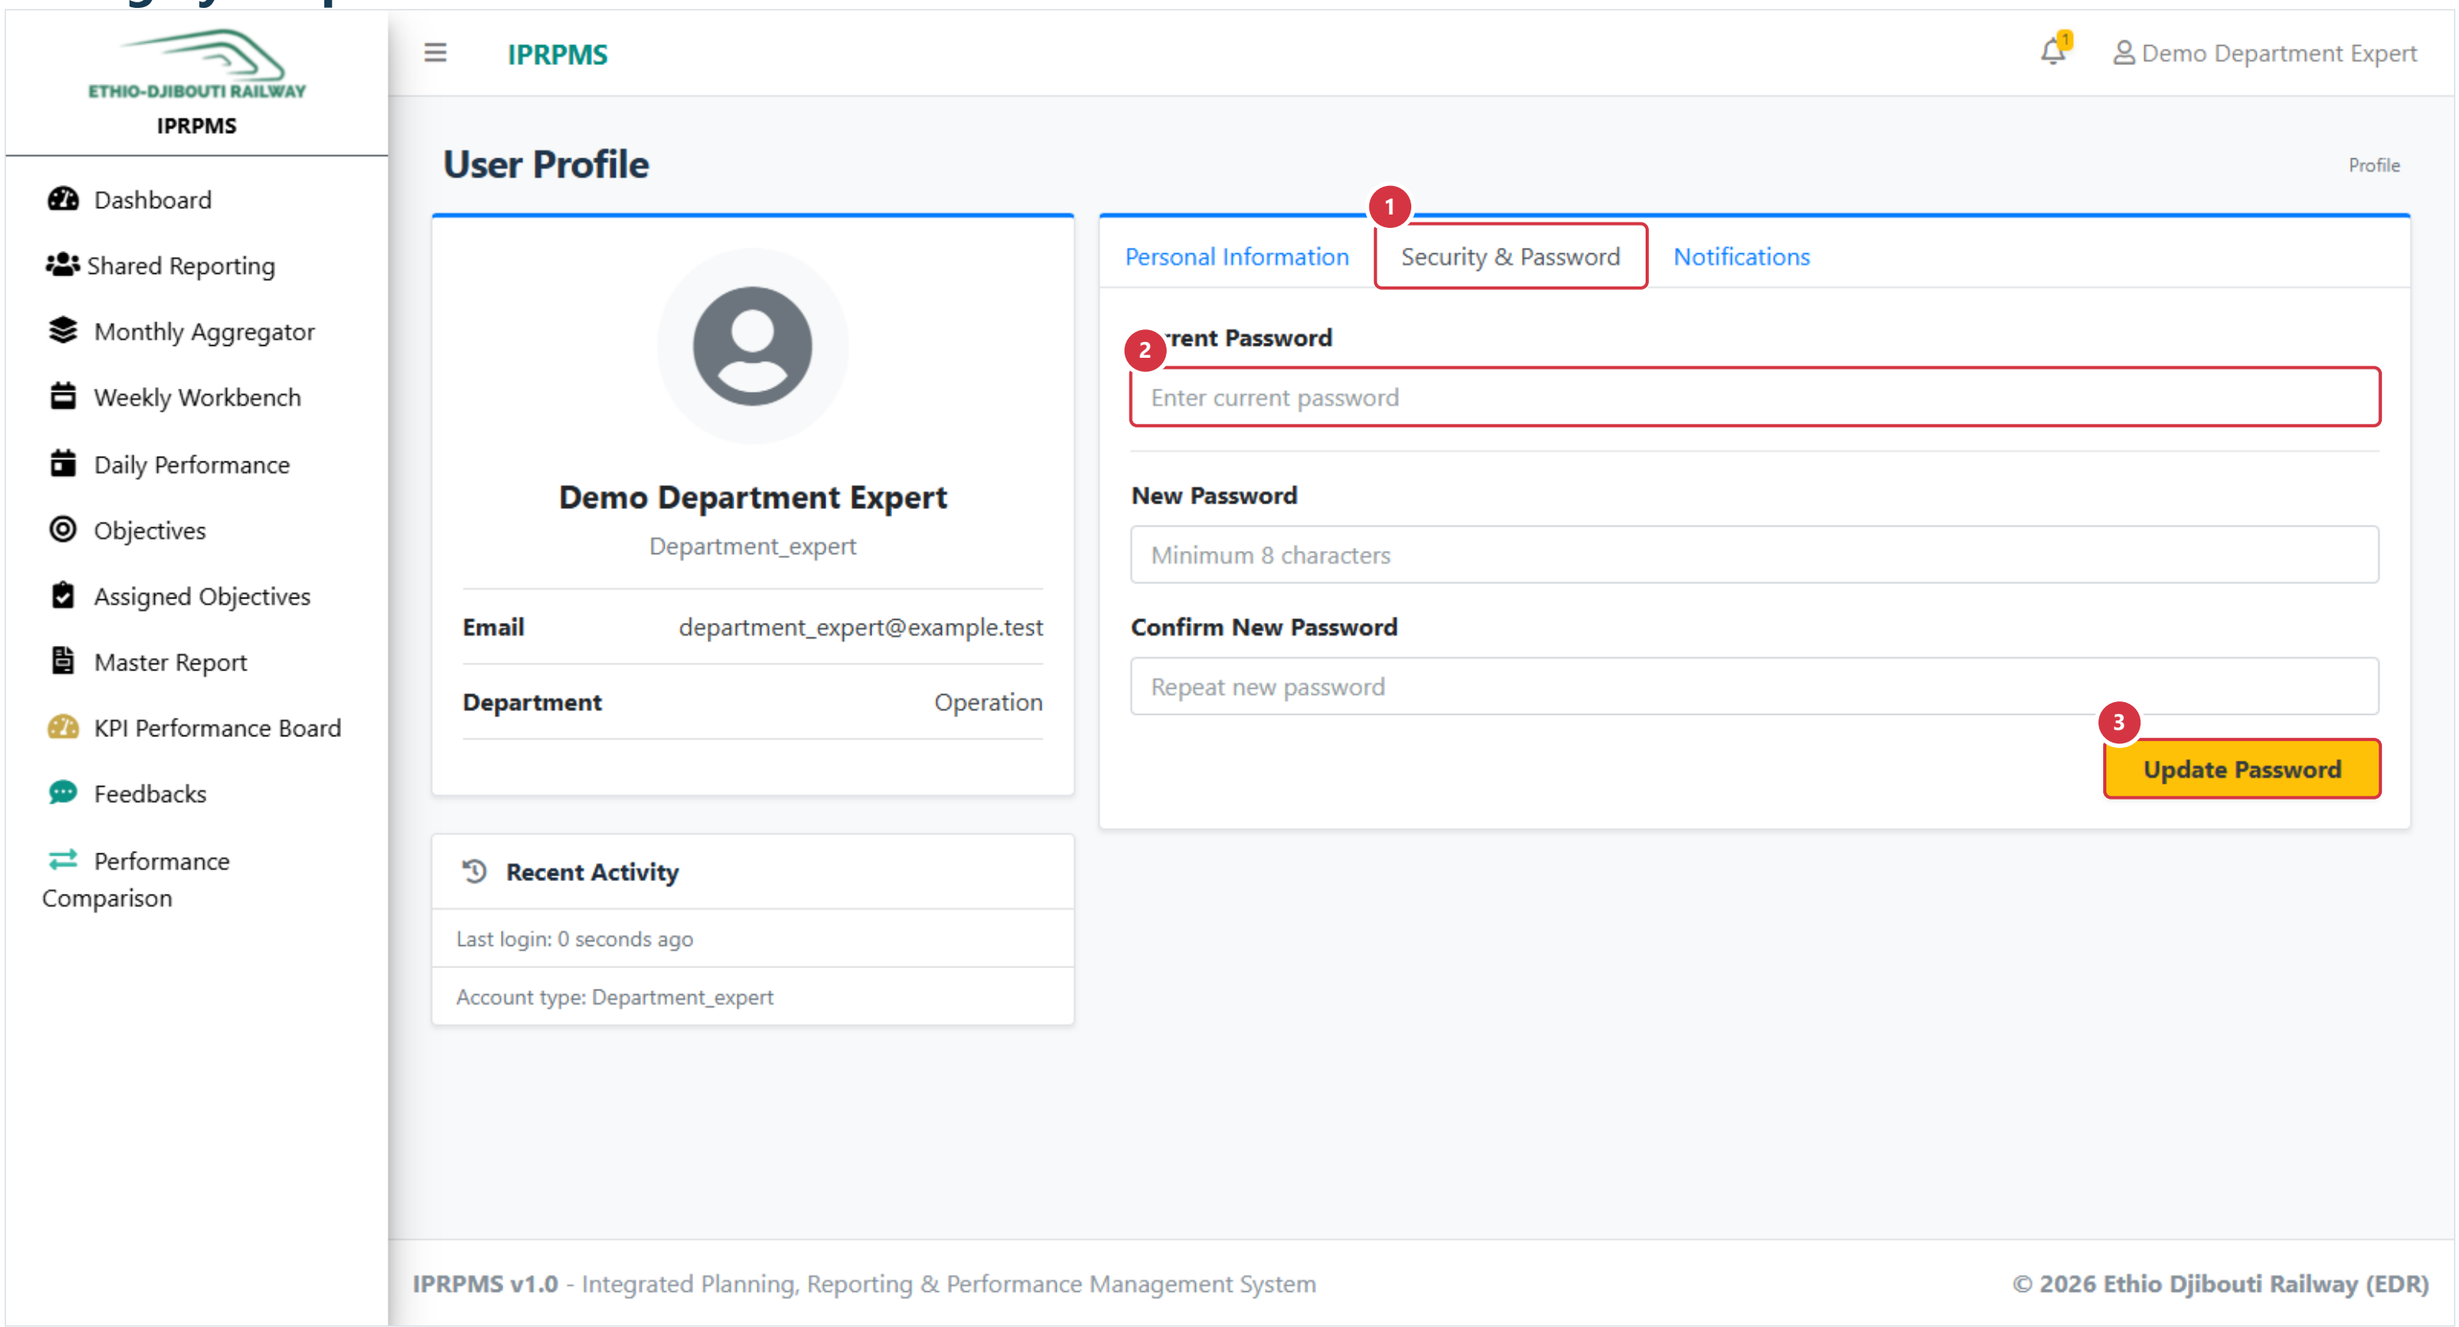

Edit your personal information

1. Click Personal Information in Profile.
2. Update Full Name or Email Address.
3. Click Save Changes and confirm the success message.

After this step: Department and role assignments are managed by the administrator, not through this form.

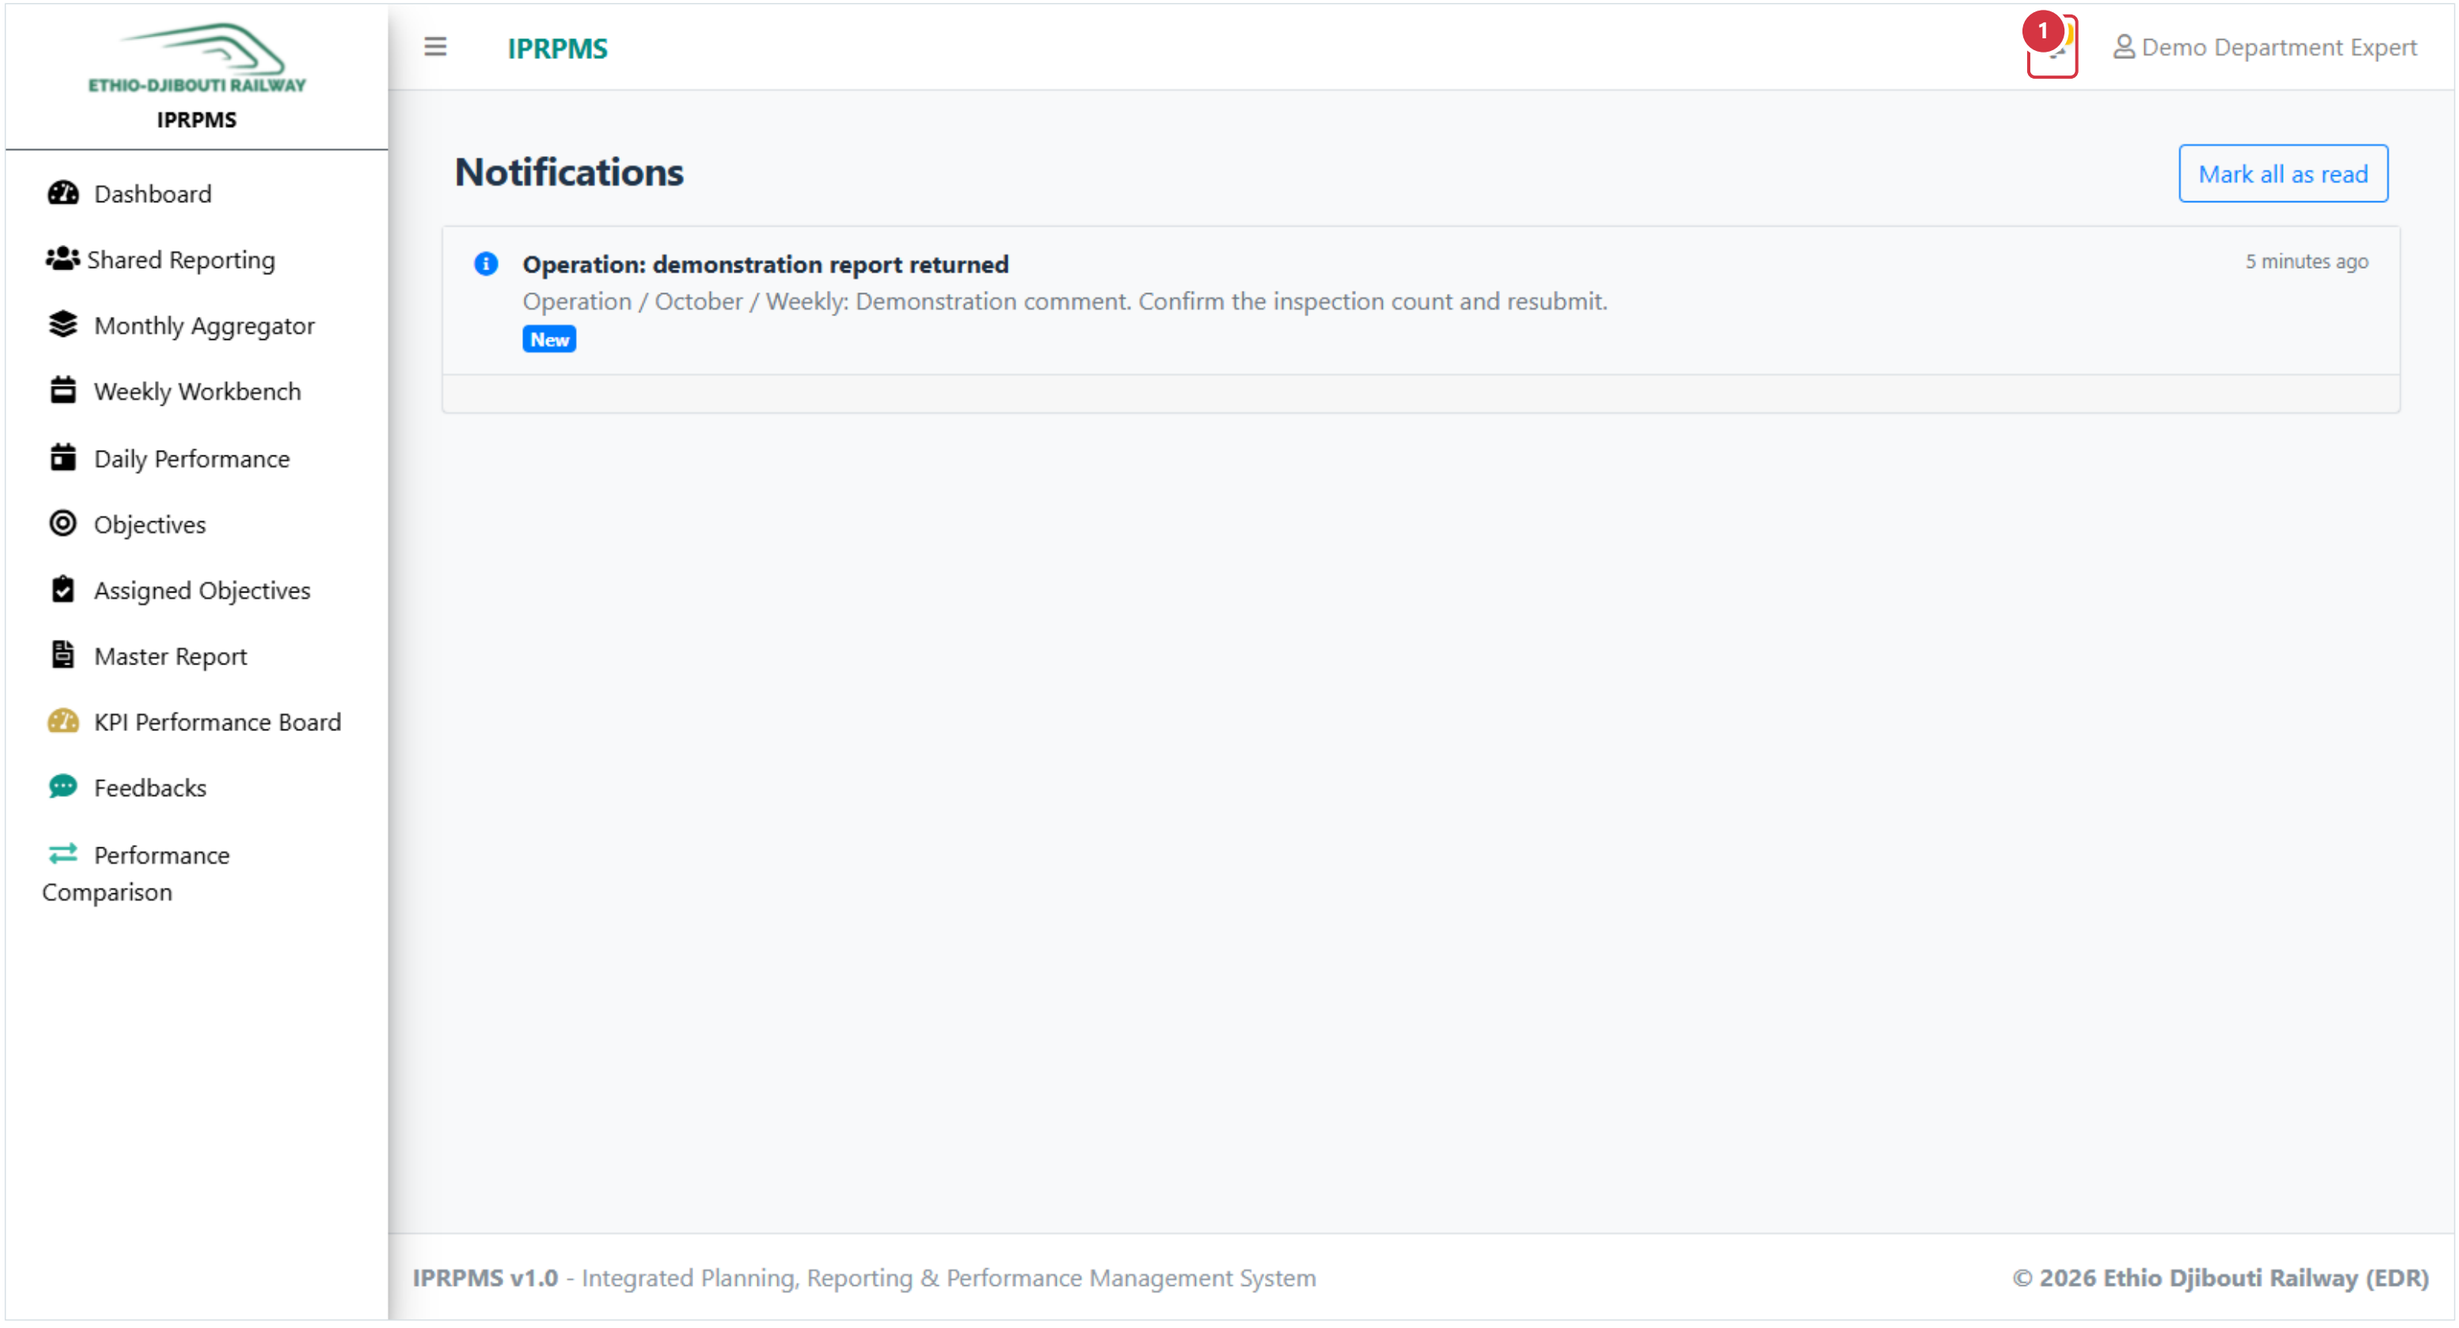

Change your password

1. Click Security & Password.
2. Enter your current password, a new password and its confirmation.
3. Click Update Password.

After this step: Use a private password. The fields are deliberately empty in this training capture.

Read workflow notifications

1. Open the notification bell or Notifications page.
2. Read the department, period, action and review comment.
3. Open the linked record or mark the notice read after acting on it.

After this step: Marking a notification read does not approve, correct or submit the underlying record.

Inspect recorded audit activity

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Audit Logs provide a chronological trail of recorded actions for investigation and accountability.

Before you click

Have the record reference, department and period ready. Use only your authorized read-only scope.

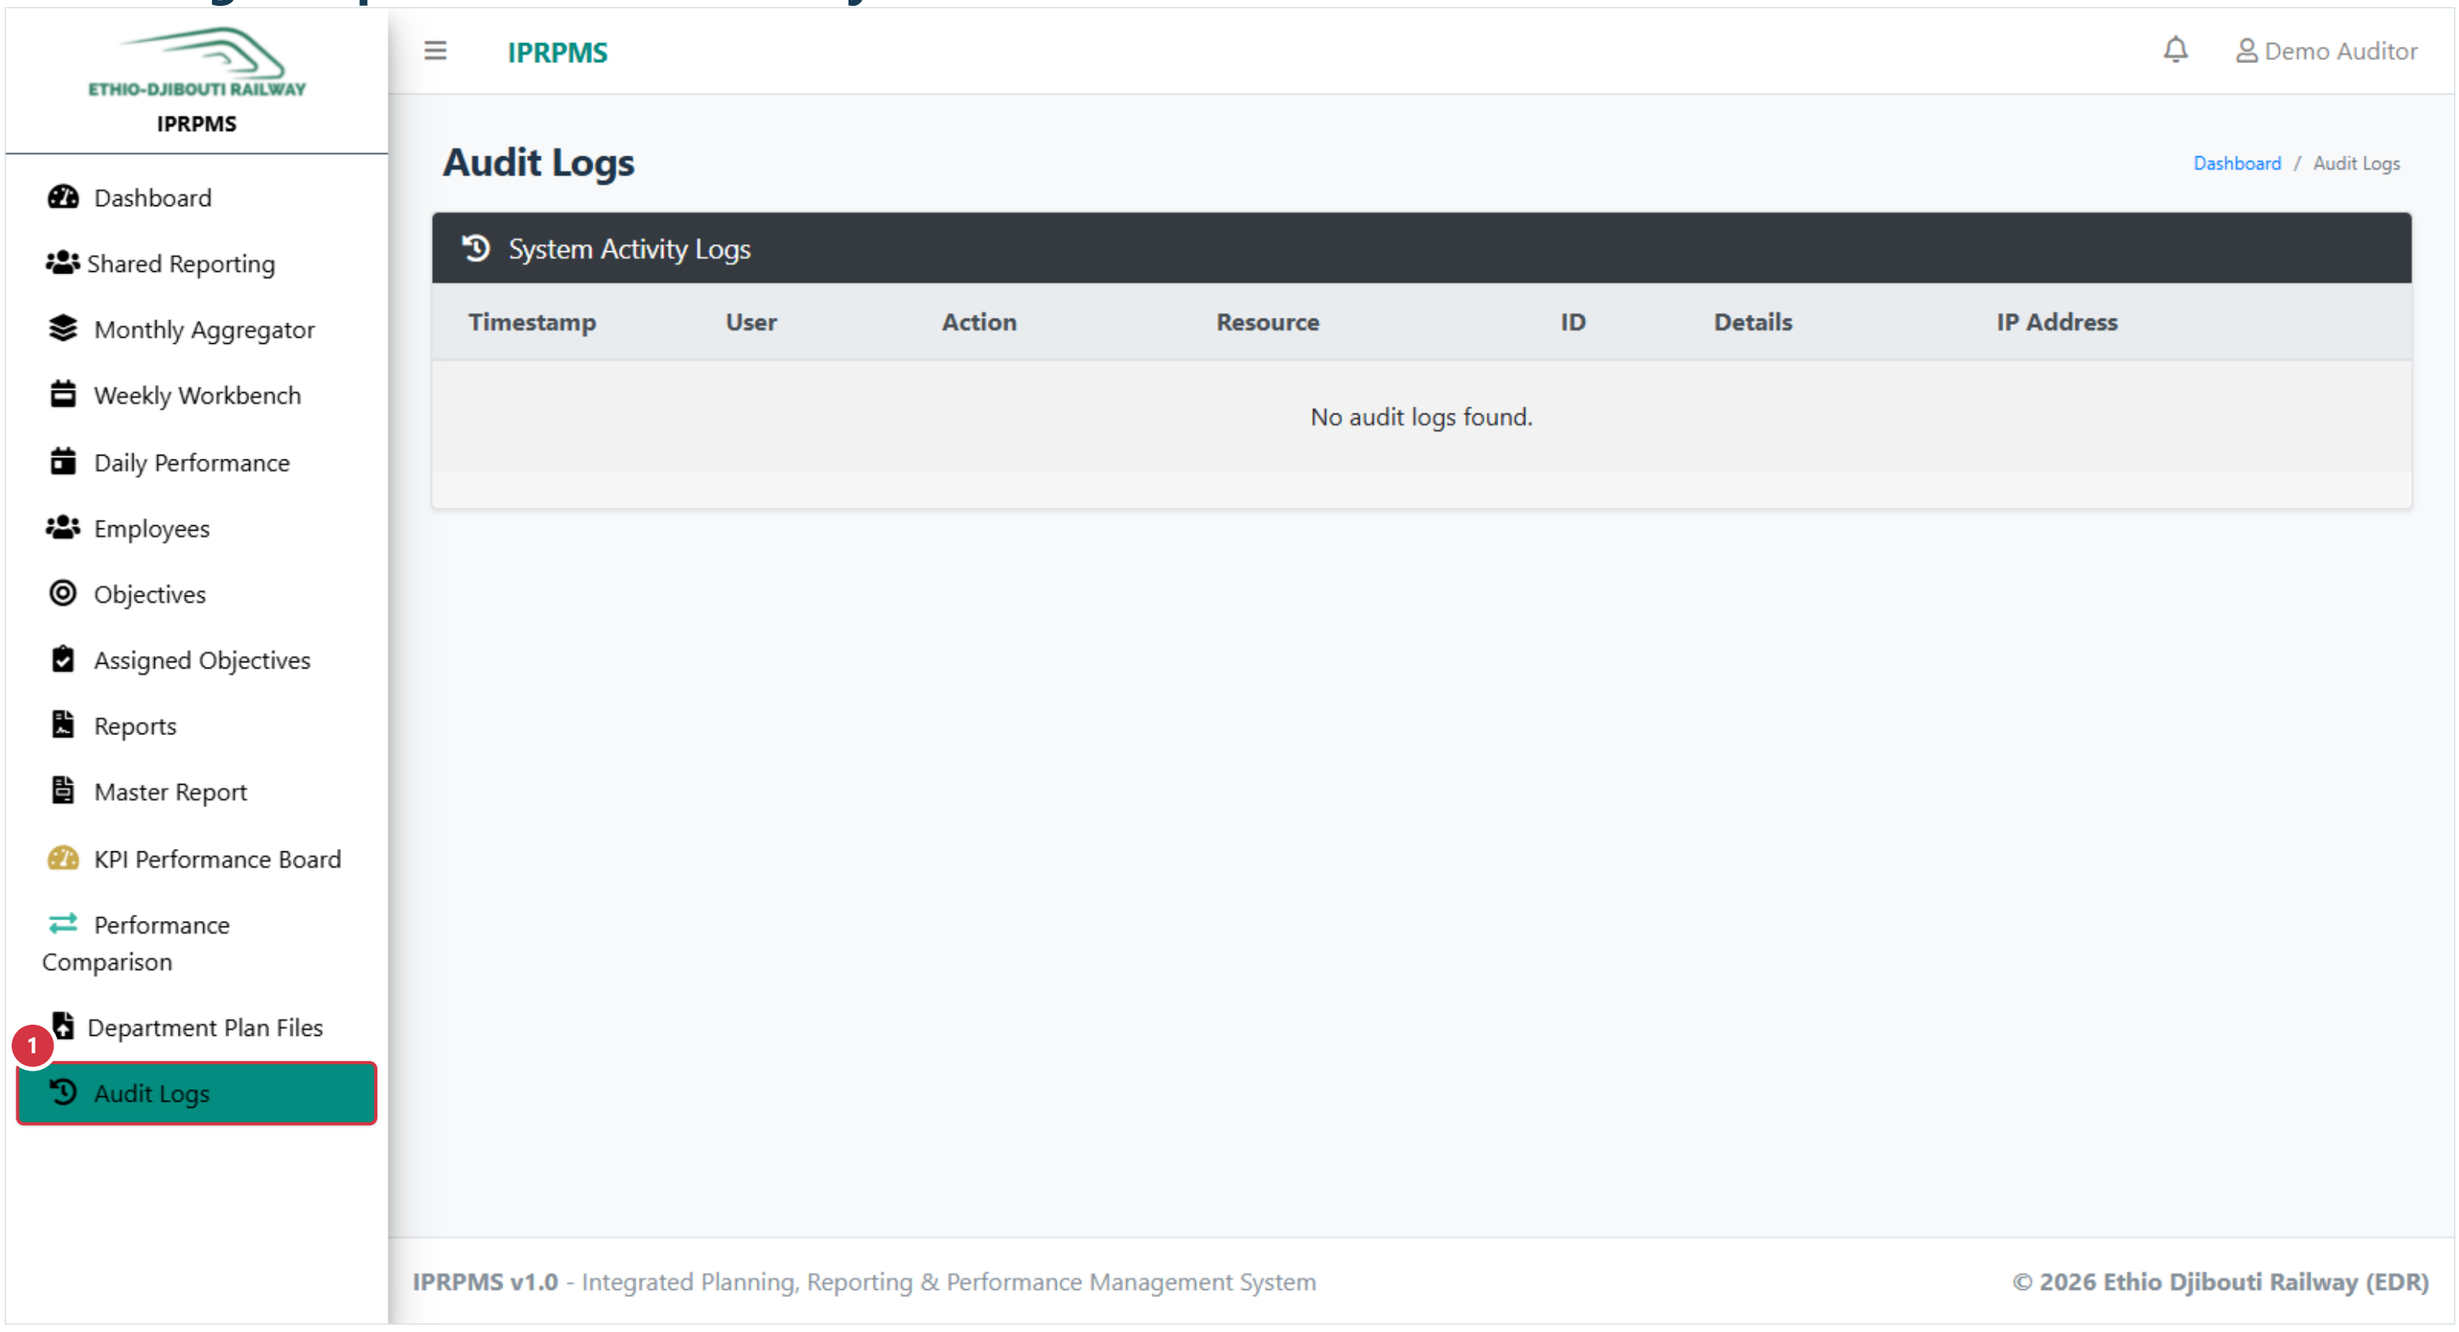

What to check

Read actor, action, affected record and time together. Cross-check the business record and supporting evidence; a log line alone is not a complete explanation.

How you know it worked

Document an evidence-backed finding and send it to the accountable owner. Verify any later correction on the existing record without changing it yourself.

Audit Logs: inspect recorded activity

1. Open Audit Logs.
2. Read the actor, activity, affected record and time.
3. Use the list search/navigation controls provided to locate the relevant event.

After this step: Audit Logs are read-only. Use the affected business record to perform an authorized correction.

Check a report within the audit scope

Understand the purpose and expected outcome, then follow the real-screen procedures on the next pages.

Why you do this

Locate the report that answers the audit question before using its figures as evidence.

Before you click

Have the department, year, period and audit scope ready.

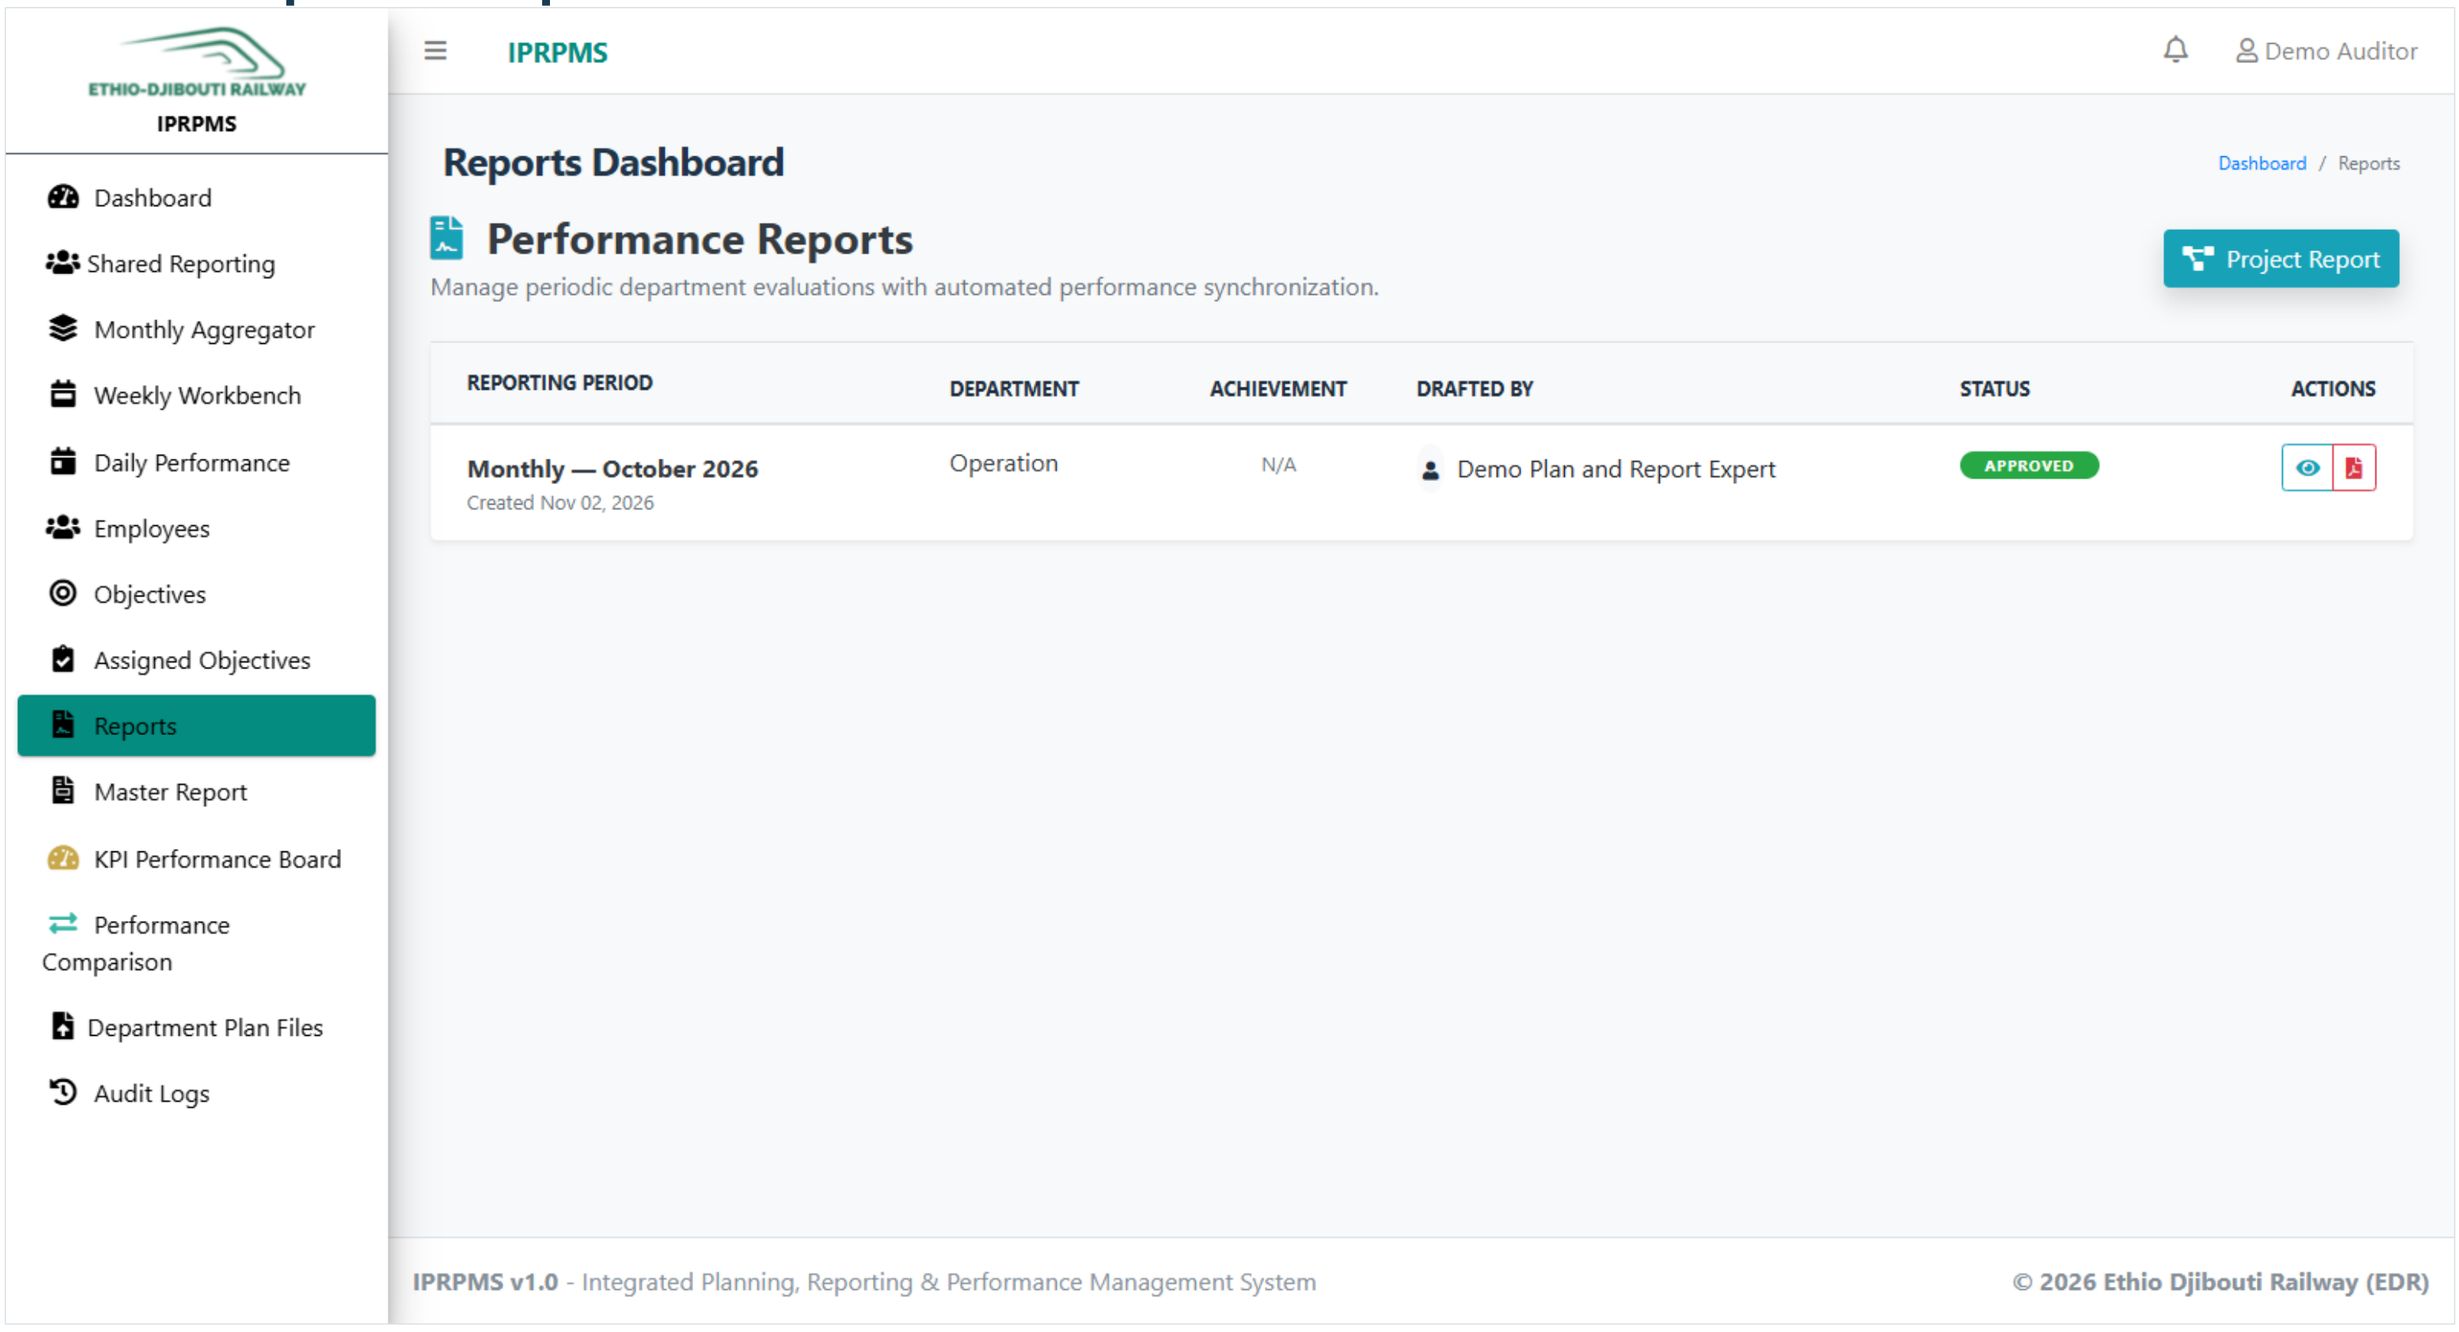

What to check

Read the report status and record reference. A visible draft or intermediate status is not the same as final approved evidence.

How you know it worked

Open the intended record for read-only inspection and document the specific evidence or gap.

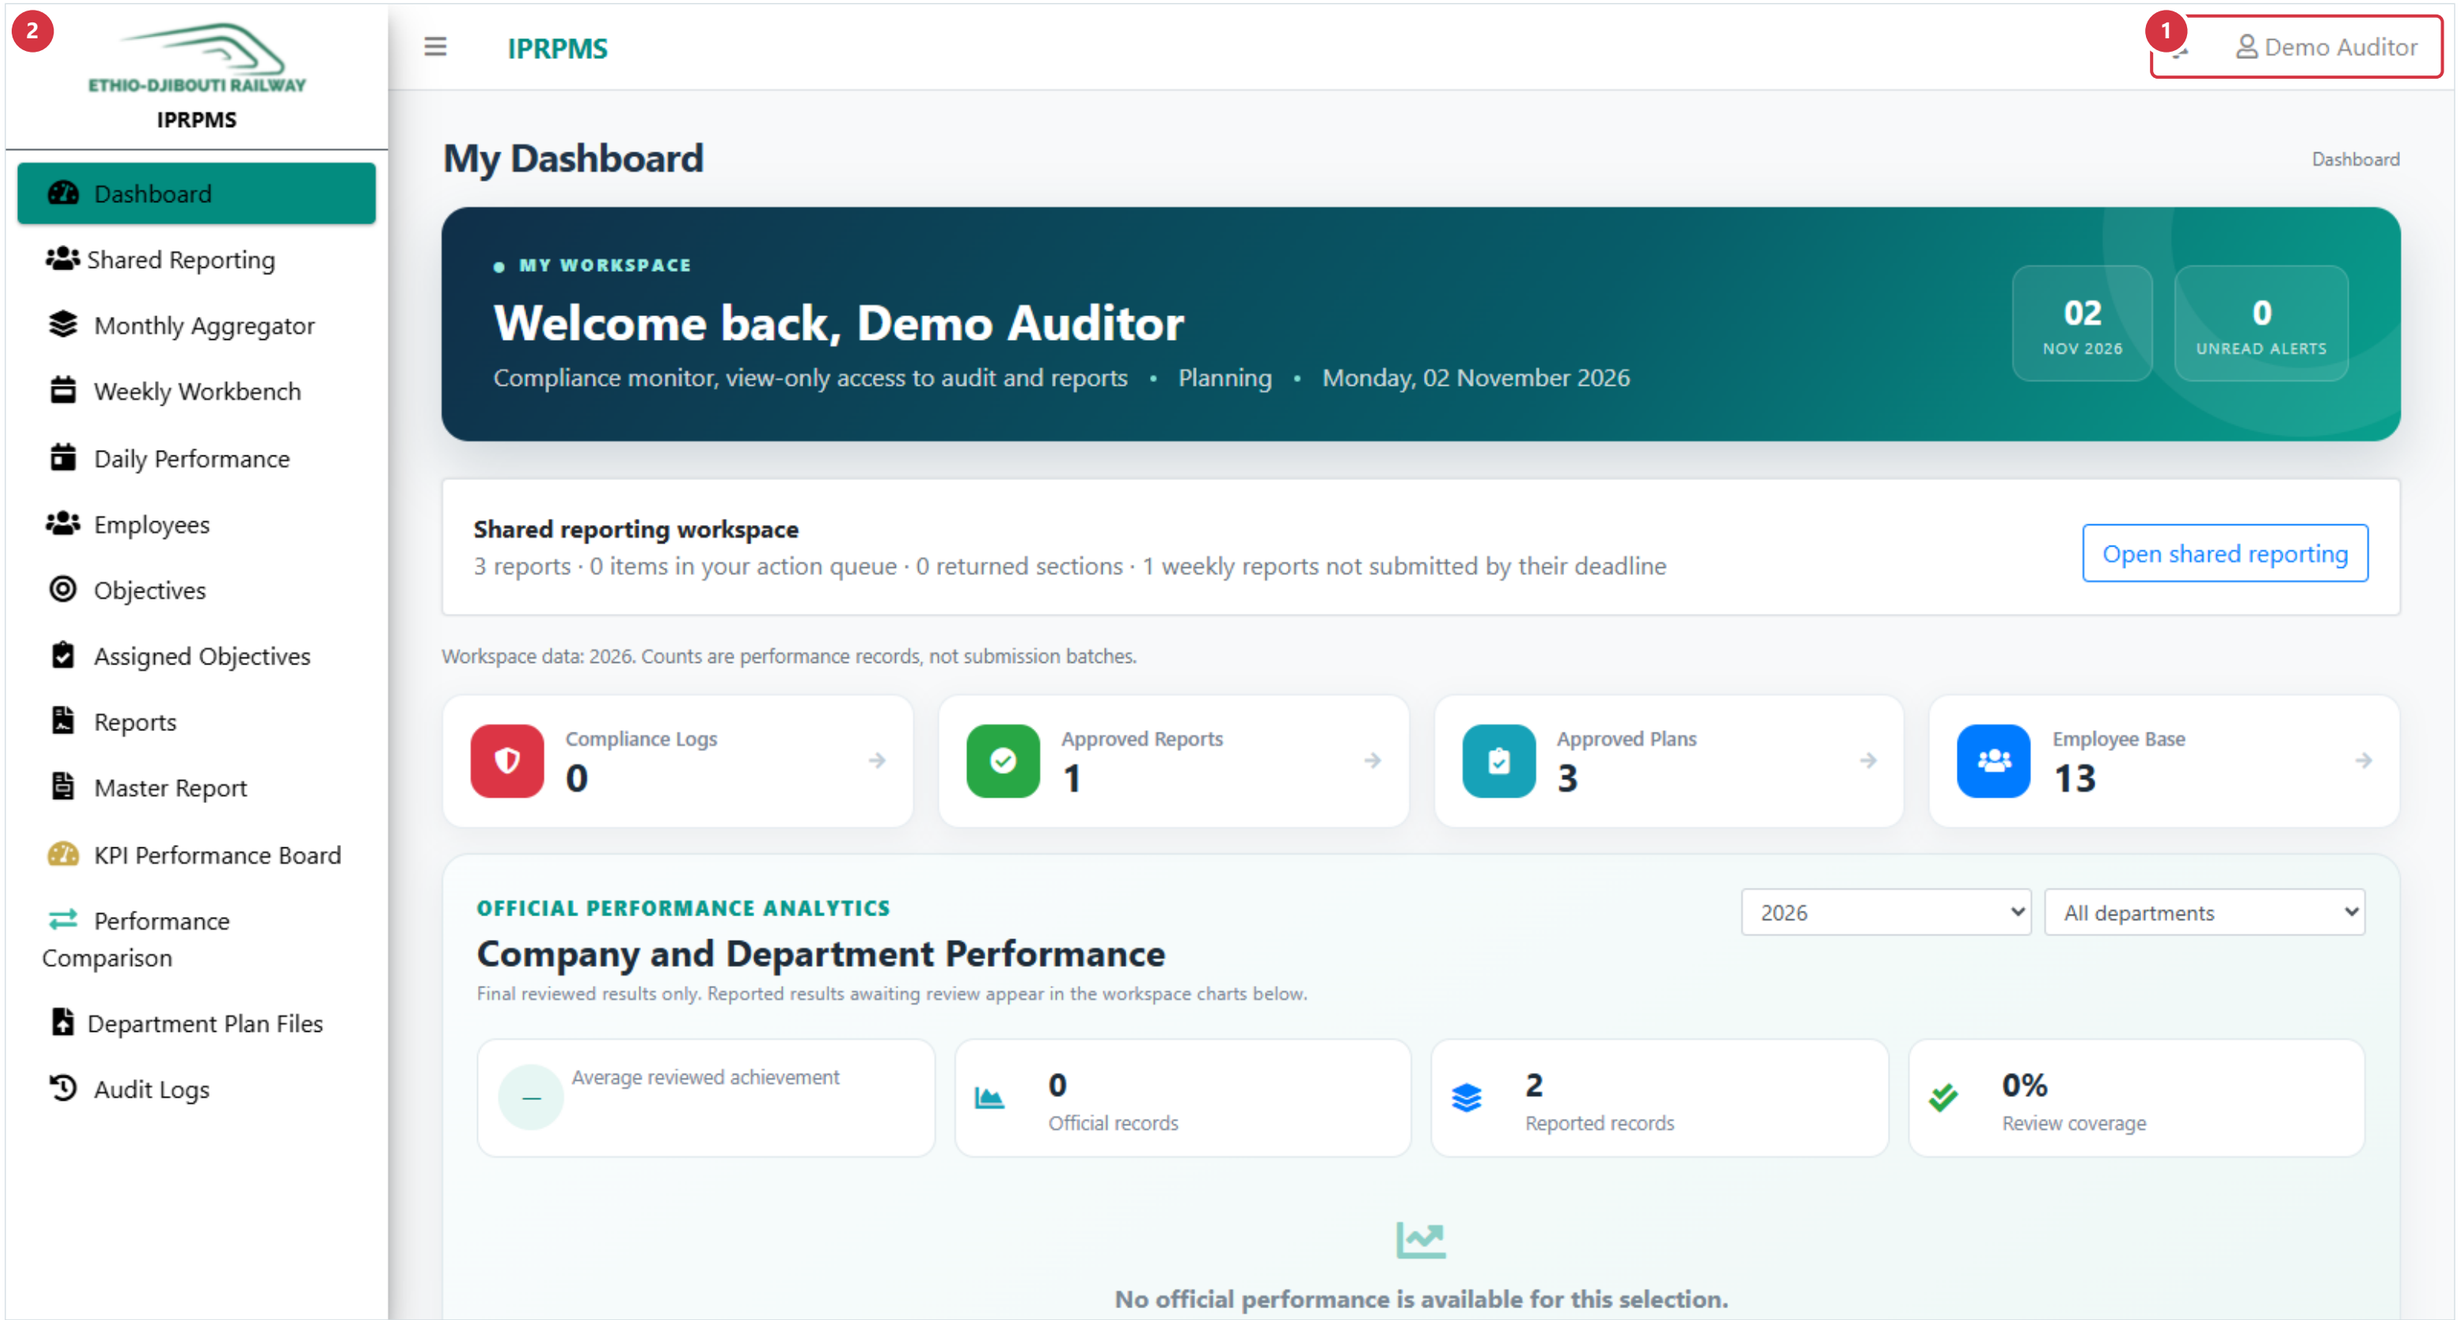

Auditor: inspect the reports list

1. Open Reports within the authorized audit scope.
2. Identify the department, year, period and status.
3. Open the intended record and record its reference for your audit evidence.

After this step: A draft or intermediate approval must not be presented as a final approved result.

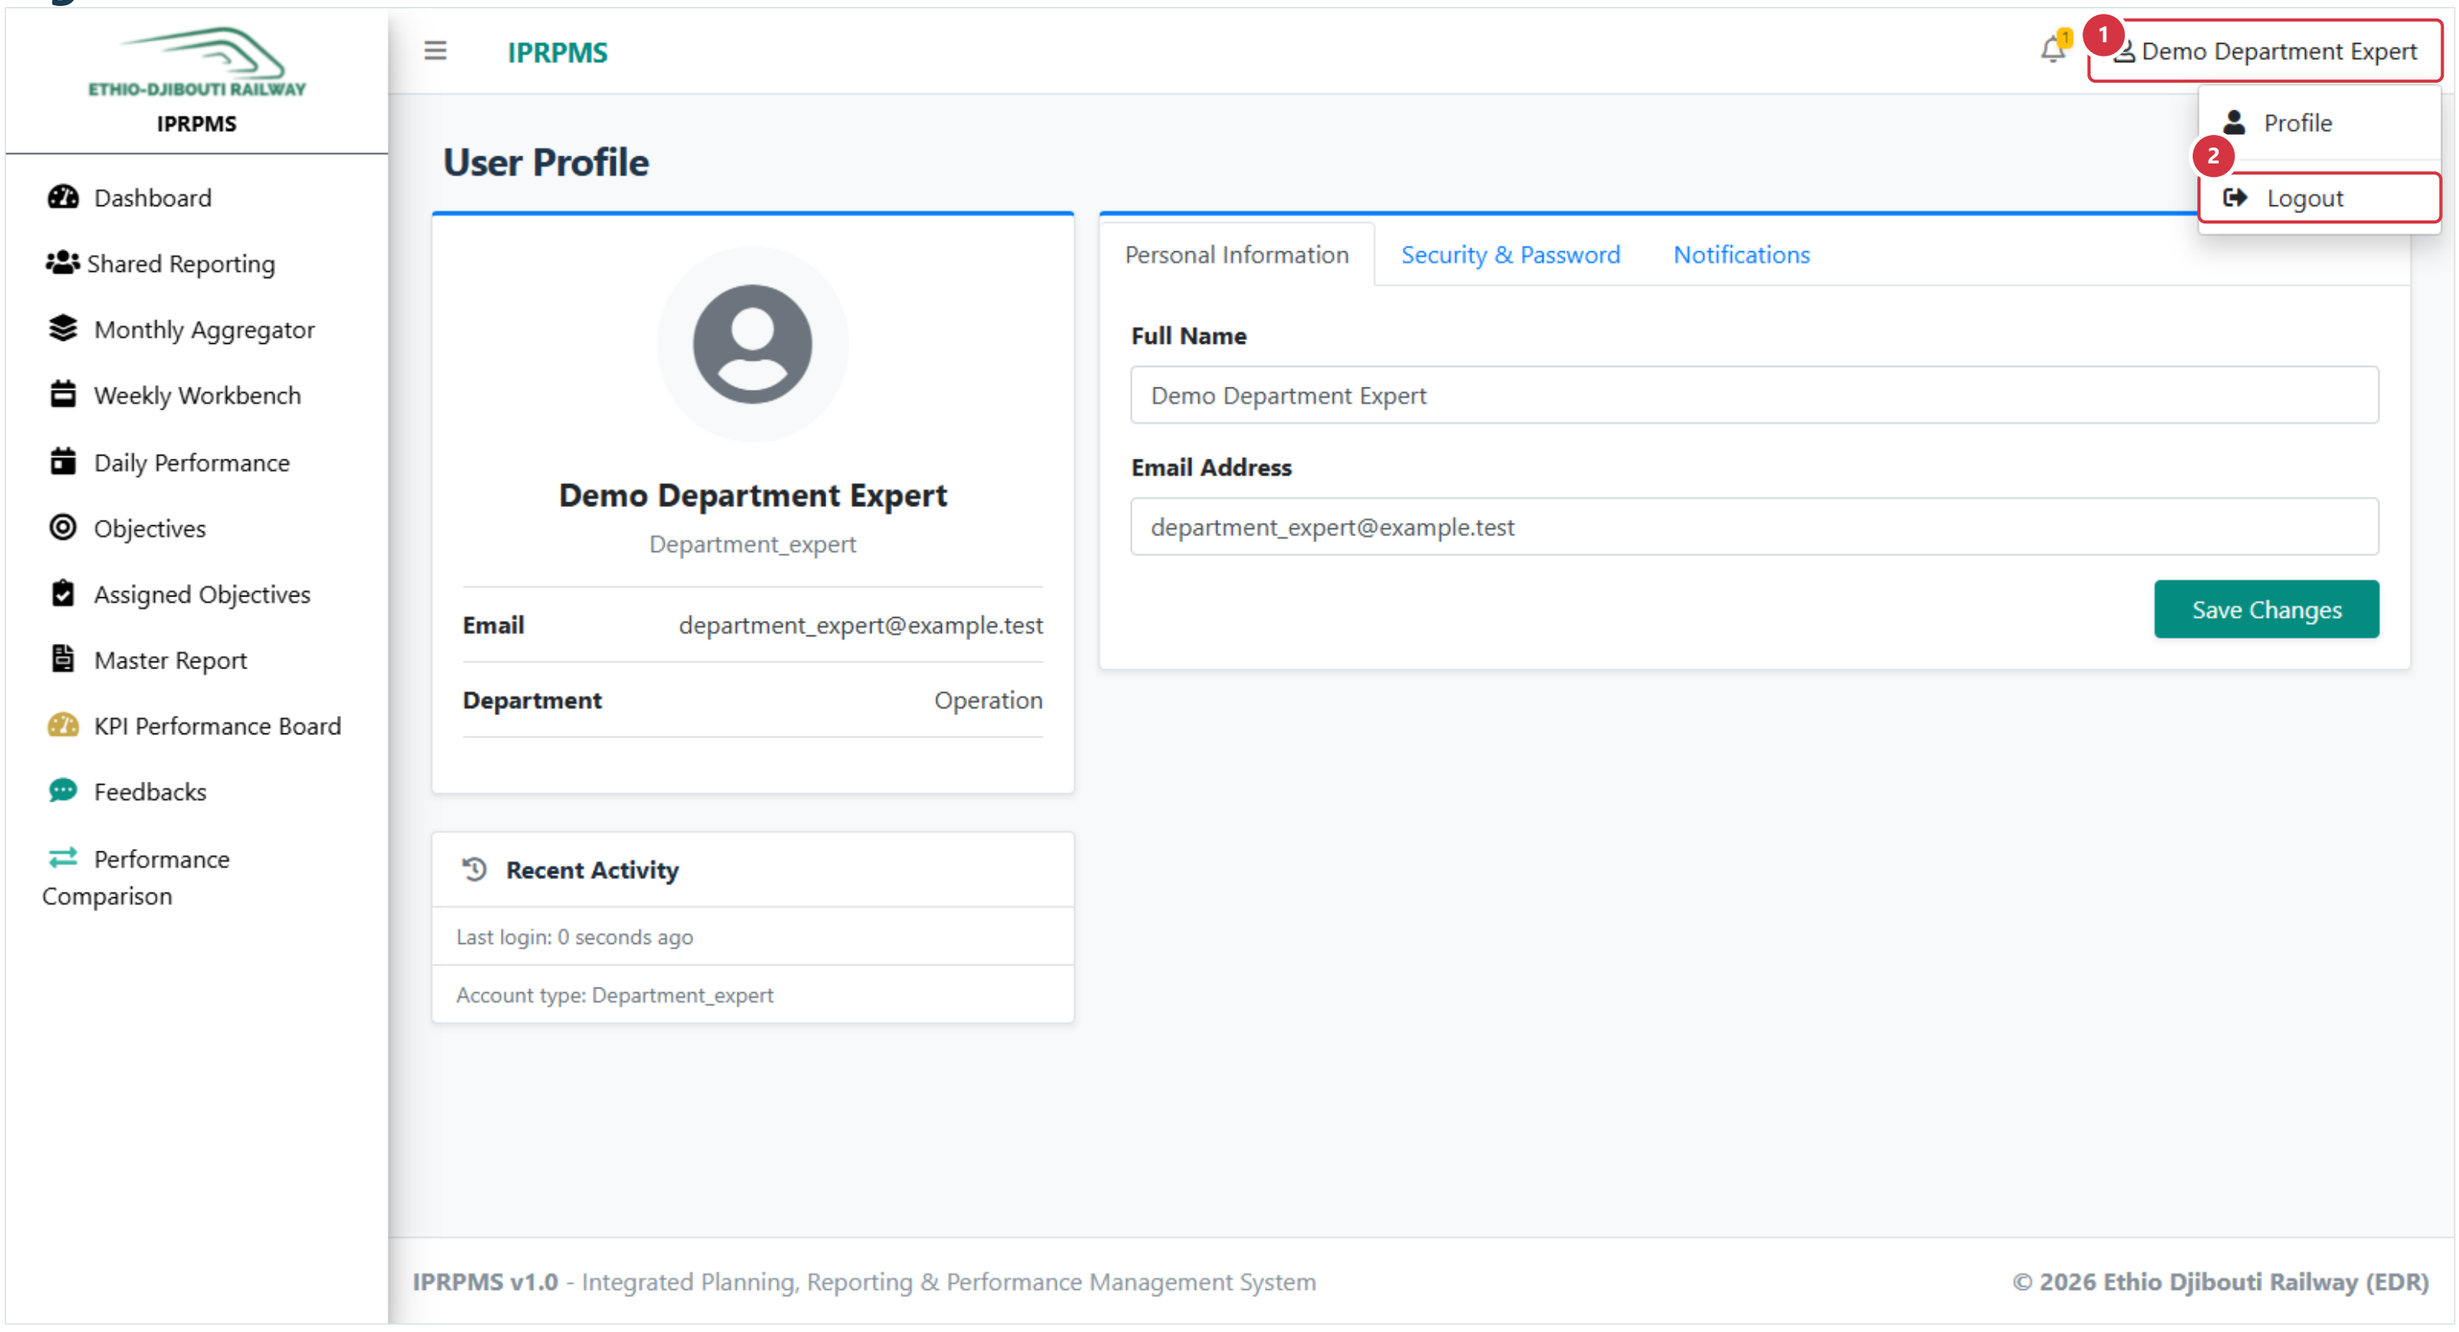

Auditor: home screen

1. Confirm your signed-in role at the top right.
2. Read the records and audit activity available to your role.
3. Review the actor, action, affected record and time. Request corrections from the responsible business user.

After this step: Menus vary by permission, department and reporting frequency.

Sign out on a shared device

1. Click your name at the top right to open the user menu.
2. Click Logout after you finish your work.

After this step: The application returns to the sign-in screen after logout.

Before you finish, check these four things

Finish means your part is complete and you know who has the next action. It does not always mean the whole record is finally approved.

Your completion checklist

1. I distinguished draft from final approved evidence. 2. My finding identifies department, period and record. 3. I checked the business record as well as audit activity. 4. I did not change or approve the data being audited.

If a menu or button is missing

If evidence is missing, report a coverage gap. Do not replace missing results with zero or treat unavailable records as evidence of a completed approval.

Ask for help with useful details

Give IT or the responsible reviewer the module, department, year, reporting period, objective or record reference and exact message. Include a safe screenshot. Never send your password.

Keep the process and data safe

Use your own account, save before sending, read return comments and keep the same record for corrections. Demonstration screenshots are teaching examples, not official performance figures. The separate logistics Import/Export module is excluded.
